<b>1</b>	<b>Statistical Physics</b>	
	Is More than Statistical Mechanics .....	1

---

## Part I Modeling of Statistical Systems

---

<b>2</b>	<b>Random Variables:</b>	
	<b>Fundamentals of Probability Theory and Statistics .....</b>	<b>5</b>
2.1	Probability and Random Variables.....	6
	2.1.1 The Space of Events .....	6
	2.1.2 Introduction of Probability .....	7
	2.1.3 Random Variables .....	9
2.2	Multivariate Random Variables	
	and Conditional Probabilities .....	12
	2.2.1 Multidimensional Random Variables .....	12
	2.2.2 Marginal Densities.....	13
	2.2.3 Conditional Probabilities and Bayes' Theorem .....	14
2.3	Moments and Quantiles .....	18
	2.3.1 Moments .....	18
	2.3.2 Quantiles.....	22
2.4	The Entropy .....	24
	2.4.1 Entropy for a Discrete Set of Events .....	24
	2.4.2 Entropy for a Continuous Space of Events .....	25
	2.4.3 Relative Entropy .....	26
	2.4.4 Remarks .....	26
	2.4.5 Applications .....	27
2.5	Computations with Random Variables .....	31
	2.5.1 Addition and Multiplication of Random Variables ....	31
	2.5.2 Further Important Random Variables .....	34
	2.5.3 Limit Theorems .....	36
2.6	Stable Random Variables	
	and Renormalization Transformations .....	39
	2.6.1 Stable Random Variables .....	39
	2.6.2 The Renormalization Transformation .....	41
	2.6.3 Stability Analysis .....	42

2.6.4	Scaling Behavior .....	44
2.7	The Large Deviation Property for Sums of Random Variables .....	46
<b>3</b>	<b>Random Variables in State Space:</b>	
	<b>Classical Statistical Mechanics of Fluids .....</b>	<b>51</b>
3.1	The Microcanonical System .....	52
3.2	Systems in Contact .....	55
3.2.1	Thermal Contact .....	55
3.2.2	Systems with Exchange of Volume and Energy .....	63
3.2.3	Systems with Exchange of Particles and Energy .....	67
3.3	Thermodynamic Potentials .....	70
3.4	Susceptibilities .....	76
3.4.1	Heat Capacities .....	76
3.4.2	Isothermal Compressibility .....	78
3.4.3	Isobaric Expansivity .....	79
3.4.4	Isochoric Tension Coefficient and Adiabatic Compressibility .....	80
3.4.5	A General Relation Between Response Functions .....	80
3.5	The Equipartition Theorem .....	82
3.6	The Radial Distribution Function .....	84
3.7	Approximation Methods .....	90
3.7.1	The Virial Expansion .....	90
3.7.2	Integral Equations for the Radial Distribution Function .....	97
3.7.3	Perturbation Theory .....	100
3.8	The van der Waals Equation .....	103
3.8.1	The Isotherms .....	104
3.8.2	The Maxwell Construction .....	105
3.8.3	Corresponding States .....	108
3.8.4	Critical Exponents .....	109
3.9	Some General Remarks about Phase Transitions and Phase Diagrams .....	112
<b>4</b>	<b>Random Fields:</b>	
	<b>Textures and Classical Statistical Mechanics of Spin Systems .....</b>	<b>115</b>
4.1	Discrete Stochastic Fields .....	116
4.1.1	Markov Fields .....	117
4.1.2	Gibbs Fields .....	119
4.1.3	Equivalence of Gibbs and Markov Fields .....	120
4.2	Examples of Markov Random Fields .....	121
4.2.1	Model with Independent Random Variables .....	121
4.2.2	Auto Model .....	122
4.2.3	Multilevel Logistic Model .....	123

4.2.4	Gauss Model	124
4.3	Characteristic Quantities of Densities for Random Fields	124
4.4	Simple Random Fields	127
4.4.1	The White Random Field or the Ideal Paramagnetic System	127
4.4.2	The One-Dimensional Ising Model	128
4.5	Random Fields with Phase Transitions	132
4.5.1	The Curie–Weiss Model	132
4.5.2	The Mean Field Approximation	135
4.5.3	The Two-Dimensional Ising Model	139
4.6	The Landau Free Energy	145
4.7	The Renormalization Group Method for Random Fields and Scaling Laws	149
4.7.1	The Renormalization Transformation	149
4.7.2	Scaling Laws	150
<b>5</b>	<b>Time-Dependent Random Variables:</b> <b>Classical Stochastic Processes</b>	155
5.1	Markov Processes	156
5.2	The Master Equation	160
5.3	Examples of Master Equations	165
5.4	Analytic Solutions of Master Equations	171
5.4.1	Equations for the Moments	171
5.4.2	The Equation for the Characteristic Function	172
5.4.3	Examples	173
5.5	Simulation of Stochastic Processes and Fields	176
5.6	The Fokker–Planck Equation	184
5.6.1	Fokker–Planck Equation with Linear Drift Term and Additive Noise	187
5.7	The Linear Response Function and the Fluctuation–Dissipation Theorem	190
5.8	Approximation Methods	193
5.8.1	The $\Omega$ Expansion	193
5.8.2	The One-Particle Picture	200
5.9	More General Stochastic Processes	203
5.9.1	Self-Similar Processes	203
5.9.2	Fractal Brownian Motion	203
5.9.3	Stable Levy Processes	204
5.9.4	Autoregressive Processes	205
<b>6</b>	<b>Quantum Random Systems</b>	213
6.1	Quantum-Mechanical Description of Statistical Systems	213
6.2	Ideal Quantum Systems: General Considerations	219

6.2.1	Expansion in the Classical Regime . . . . .	222
6.2.2	First Quantum-Mechanical Correction Term . . . . .	223
6.2.3	Relations Between the Thermodynamic Potential and Other System Variables . . . . .	224
6.3	The Ideal Fermi Gas . . . . .	225
6.3.1	The Fermi–Dirac Distribution . . . . .	226
6.3.2	Determination of the System Variables at Low Temperatures . . . . .	229
6.3.3	Applications of the Fermi–Dirac Distribution . . . . .	231
6.4	The Ideal Bose Gas . . . . .	234
6.4.1	Particle Number and the Bose–Einstein Distribution . . . . .	234
6.4.2	Bose–Einstein Condensation . . . . .	236
6.4.3	Pressure . . . . .	239
6.4.4	Energy and Specific Heat . . . . .	241
6.4.5	Entropy . . . . .	243
6.4.6	Applications of Bose Statistics . . . . .	243
6.5	The Photon Gas and Black Body Radiation . . . . .	244
6.5.1	The Kirchhoff Law . . . . .	250
6.5.2	The Stefan–Boltzmann Law . . . . .	252
6.5.3	The Pressure of Light . . . . .	253
6.5.4	The Total Radiative Power of the Sun . . . . .	255
6.5.5	The Cosmic Background Radiation . . . . .	257
6.6	Lattice Vibrations in Solids: The Phonon Gas . . . . .	257
6.7	Systems with Internal Degrees of Freedom: Ideal Gases of Molecules . . . . .	265
6.8	Magnetic Properties of Fermi Systems . . . . .	271
6.8.1	Diamagnetism . . . . .	272
6.8.2	Paramagnetism . . . . .	277
6.9	Quasi-particles . . . . .	278
6.9.1	Models for the Magnetic Properties of Solids . . . . .	281
6.9.2	Superfluidity . . . . .	286
<b>7</b>	<b>Changes of External Conditions . . . . .</b>	<b>289</b>
7.1	Reversible State Transformations, Heat, and Work . . . . .	289
7.2	Cyclic Processes . . . . .	294
7.3	Exergy and Relative Entropy . . . . .	298
7.4	Time Dependence of Statistical Systems . . . . .	301

---

## Part II Analysis of Statistical Systems

---

<b>8</b>	<b>Estimation of Parameters . . . . .</b>	<b>309</b>
8.1	Samples and Estimators . . . . .	310
8.2	Confidence Intervals . . . . .	317
8.3	Propagation of Errors . . . . .	320

8.4	The Maximum Likelihood Estimator .....	322
8.5	The Least-Squares Estimator .....	327
<b>9</b>	<b>Signal Analysis: Estimation of Spectra .....</b>	<b>339</b>
9.1	The Discrete Fourier Transform and the Periodogram.....	339
9.2	Filters .....	346
9.2.1	Filters and Transfer Functions .....	347
9.2.2	Filter Design .....	350
9.3	Consistent Estimation of Spectra .....	354
9.4	Frequency Distributions for Nonstationary Time Series.....	363
9.5	Filter Banks and Discrete Wavelet Transformations .....	366
9.6	Wavelets .....	376
9.6.1	Wavelets as Base Functions in Function Spaces.....	377
9.6.2	Wavelets and Filter Banks.....	380
9.6.3	Solutions of the Dilation Equation.....	382
<b>10</b>	<b>Estimators Based on a Probability Distribution for the Parameters .....</b>	<b>387</b>
10.1	Bayesian Estimator and Maximum a Posteriori Estimator ...	387
10.2	Marginalization of Nuisance Parameters .....	389
10.3	Numerical Methods for Bayesian Estimators .....	394
<b>11</b>	<b>Identification of Stochastic Models from Observations ....</b>	<b>403</b>
11.1	Hidden Systems .....	403
11.2	The Maximum a Posteriori (MAP) Estimator for the Inverse Problem .....	405
11.2.1	The Least-Squares Estimator as a Special MAP Estimator .....	407
11.2.2	Strategies for Choosing the Regularization Parameter .	408
11.2.3	The Regularization Method.....	411
11.2.4	Examples of Estimating a Distribution Function by a Regularization Method .....	414
11.3	Estimating the Realization of a Hidden Process .....	417
11.3.1	The Viterbi Algorithm .....	417
11.3.2	The Kalman Filter .....	421
<b>12</b>	<b>Estimating the Parameters of a Hidden Stochastic Model .</b>	<b>431</b>
12.1	The Expectation Maximization Method (EM Method) .....	432
12.2	Use of the EM Method for Estimation of the Parameters in Hidden Systems .....	434
12.3	Estimating the Parameters of a Hidden Markov Model .....	436
12.3.1	The Forward Algorithm .....	437
12.3.2	The Backward Algorithm.....	437

12.3.3	The Estimation Formulas . . . . .	438
12.4	Estimating the Parameters in a State Space Model . . . . .	441
<b>13</b>	<b>Statistical Tests and Classification Methods</b> . . . . .	<b>445</b>
13.1	General Comments Concerning Statistical Tests . . . . .	445
13.1.1	Test Quantity and Significance Level . . . . .	445
13.1.2	Empirical Moments for a Test Quantity: The Bootstrap Method . . . . .	449
13.1.3	The Power of a Test . . . . .	451
13.2	Some Useful Tests . . . . .	452
13.2.1	The $z$ - and the $t$ -Test . . . . .	452
13.2.2	Test for the Equality of the Variances of Two Sets of Measurements, the $F$ -Test . . . . .	454
13.2.3	The $\chi^2$ -Test . . . . .	455
13.2.4	The Kolmogorov–Smirnov Test . . . . .	457
13.2.5	The $F$ -Test for Least-Squares Estimators . . . . .	458
13.2.6	The Likelihood-Ratio Test . . . . .	459
13.3	Classification Methods . . . . .	461
13.3.1	Classifiers . . . . .	462
13.3.2	Estimation of Parameters That Arise in Classifiers . . . . .	466
13.3.3	Automatic Classification (Cluster Analysis) . . . . .	467
<b>Appendix: Random Number Generation for Simulating Realizations of Random Variables</b> . . . . .		<b>471</b>
<b>Problems</b> . . . . .		<b>473</b>
<b>Hints and Solutions</b> . . . . .		<b>495</b>
<b>References</b> . . . . .		<b>503</b>
