

Contents

1. Introduction	1
2. The Games of Life	5
2.1 Excitable Media	5
2.2 Collective Amoebae	10
2.3 Fish Schools	15
2.4 Insect Societies	22
2.5 Further Reading	30
3. Active Motion	33
3.1 Elementary Mechanisms of Self-Motion	33
3.2 Self-Motion in External Fields	39
3.3 Hydrodynamics of Active Fluids	43
3.4 Traffic Flows	53
3.5 Further Reading	64
4. Ridden by the Noise	69
4.1 Demons and Ratchets	69
4.2 Navigation in Fluctuating Fields	76
4.3 Long Tails in Probability Distributions	85
4.4 Noise as a Resource	94
4.5 Further Reading	102
5. Dynamics with Delays and Expectations	105
5.1 The Age Dimension	105
5.2 Demographic Waves	108
5.3 A Model of the Market Crash	114
5.4 Further Reading	119
6. Mutual Synchronization	127
6.1 Interacting Clocks	127
6.2 The Synchronization Transition	131
6.3 The Influence of Noise	137
6.4 Noise-Induced Breakdown of Coherent Active Motion	140

6.5	Synchronous Chaos	146
6.6	Further Reading	152
7.	Dynamical Clustering	155
7.1	Logistic Maps	155
7.2	Rössler Oscillators	164
7.3	Neural Networks	171
7.4	Protein Machines	179
7.5	Further Reading	193
8.	Hierarchical Organization	199
8.1	Hierarchies	199
8.2	The Sherrington–Kirkpatrick Model	205
8.3	Replica-Symmetry Breaking in Dynamical Glasses	215
8.4	Fluid Turbulence	220
8.5	Hierarchically Structured Swarms	224
8.6	Further Reading	228
9.	Dynamics and Evolution of Networks	233
9.1	Societies	234
9.2	Properties of Graphs	238
9.3	Clustering and Synchronization in Dynamical Networks	249
9.4	Evolution of Graphs	262
9.5	Further Reading	274
	References	279
	Subject Index	297
