

**Landolt-Börnstein**  
**Group I: Elementary Particles, Nuclei and Atoms**

**Volume 10**

**Electroweak Interactions. Experimental Facts and Theoretical Foundation**

	Introductory material	
1	Outline	1
2	The standard theory	9
2.1	Quantum electrodynamics	9
2.2	Non-Abelian gauge invariance	11
2.3	The Higgs-Kibble mechanism for mass generation	12
2.4	Quantum flavourdynamics	13
2.5	Feynman-rules and renormalization	17
2.6	Quantum chromodynamics	28
2.7	Confrontation of theory and experiment	30
3	The fermion sector	37
3.1	Leptons	37
3.2	Quarks	43
4	The gauge boson sector	70
4.1	The photon	70
4.2	Discovery of W and Z	70
4.3	Properties of W and Z	78
4.4	Confrontation with QFD	83
4.5	Conclusions	87
5	The Higgs sector	88
6	The currents	93
6.1	The electromagnetic current	93
6.2	The weak neutral current	109
6.3	The weak charged current	172
7	Beyond QFD	252
7.1	Forbidden processes	252
7.2	Open problems in QFD	265
7.3	New directions	270
8	References	272
9	Subject index	297
