Group I: Elementary Particles, Nuclei and Atoms

Volume 11
Shielding Against High Energy Radiation

	Introductory material	
1	Sources of ionizing radiation and shielding concepts	1
1.1	Introduction	1
1.2	Shielding estimations	27
1.3	Further information	30
1.4	References for 1	64
2	Hadron attenuation	67
2.1	Introduction	67
2.2	Physical processes	68
2.3	The hadron cascade	98
2.4	Results of the Monte-Carlo calculations	104
2.5	Empirical shielding formulae	124
2.6	Estimation of shielding thickness	136
2.7	Other results from hadron cascade calculations	152
2.8	References for 2	165
3	Electron attenuation	172
3.1	Introduction	172
3.2	Physical processes	172
3.3	Electromagnetic cascades	267
3.4	Shielding against electrons	309
3.5	Tables of shielding requirements in practical situations	324
3.6	References for 3	336
4	Muon transport	350
4.1	Introduction	350
4.2	Interaction of muons with matter	358
4.3	Muon slowing-down	368
4.4	Multiple scattering	384
4.5	Muons from proton-induced cascades	394
4.6	Specification of muon shielding	402
4.7	References for 4	407
Appendix	Transmission dominated by low-energy phenomena	411
A.1	Neutron skyshine	411
A.2	Neutron attenuation in labyrinths, ducts and penetrations	417
A.3	Photon attenuation in labyrinths, ducts and penetrations	423
A.4	References to appendix	425
