

# Table of Contents

<b>1</b>	<b>Historical Introduction</b>	1
1.1	Neutrinos and the Law of Weak Interactions	1
1.2	Detection of the Neutrino and the Discovery of Generations	7
1.3	Search for Intermediate Bosons to the Unified Theory of Electroweak Interactions	12
1.4	The Neutrino-Mass Quest	15
1.5	The Interest in Neutrinos Today	19
<b>2</b>	<b>Standard Theory of Electroweak Interactions</b>	23
2.1	Classical Theory of Weak Interactions	23
2.2	Weinberg–Salam Theory of Electroweak Interactions	24
2.2.1	$SU(2) \times U(1)$ Symmetry	24
2.2.2	The Gauge Fields	25
2.2.3	Spontaneous Symmetry Breaking and the Higgs Mechanism	27
2.2.4	Gauge Boson Mixing	29
2.2.5	Fermion Mass	30
2.2.6	Introduction of Quarks	31
2.2.7	Low-Energy Weak Interactions	31
2.2.8	Introduction of the Generations	33
2.3	Quantum Field Theory: The Renormalisable Gauge	35
2.4	Consistency of the Quantum Field Theory: Anomaly Cancellation	37
2.4.1	Renormalisability	37
2.4.2	Triangle Anomaly	38
2.4.3	Implications of Anomaly	43
2.5	Experimental Test	44
2.5.1	Electroweak Parameters	44
2.5.2	Higher Order Perturbations	46
2.5.3	Other Elementary Parameters in the Weinberg–Salam Theory	52
2.6	The Problem with the Higgs Sector and the Search for the Higgs Particle	52
2.6.1	Theoretical Considerations on the Higgs Mass	52

## VIII Table of Contents

2.6.2	Empirical Limits on the Higgs Mass . . . . .	56
2.6.3	Theoretical Implications of a ‘Small’ Higgs Mass . . . . .	56
<b>3</b>	<b>Applications of the Electroweak Theory . . . . .</b>	<b>59</b>
3.1	Physics with the Charged Current . . . . .	59
3.2	Muon Decay . . . . .	60
3.3	Weak Decays Involving Hadrons: Classification . . . . .	62
3.4	Leptonic Decays of Mesons . . . . .	64
3.5	Semileptonic Decays of Mesons . . . . .	65
3.6	Theory of Nuclear Beta Decays . . . . .	67
3.6.1	Fermi Theory . . . . .	67
3.6.2	Classification of Nuclear Beta Decays . . . . .	74
3.6.3	Electron Capture . . . . .	75
3.6.4	$0^+ \rightarrow 0^+$ Transitions . . . . .	78
3.6.5	Nuclear Structure and Gamow–Teller Matrix Elements . . . . .	79
3.7	Hyperon Beta Decay . . . . .	86
3.8	Determination of Quark Mixing Angles . . . . .	87
3.9	Number of Generations . . . . .	91
3.10	Neutrino–Lepton Scattering . . . . .	92
3.11	Neutrino–Nucleon Scattering . . . . .	97
3.12	Neutrino–Nucleus Scattering . . . . .	101
3.12.1	General Considerations . . . . .	101
3.12.2	Examples of Specific Reactions . . . . .	106
3.12.3	Nuclear Excitation with the Neutral Current . . . . .	113
3.12.4	Neutrino Reactions off Carbon . . . . .	114
3.12.5	Neutrino Reactions off Deuterium . . . . .	119
3.12.6	Neutrino–Nucleus Reactions at Middle–High Energies .	121
3.13	Single Pion Production . . . . .	126
3.14	Deep-Inelastic Neutrino Scattering off Nucleons . . . . .	129
3.15	Ultra-High-Energy Neutrino–Nucleon Scattering . . . . .	133
3.16	Coherent Nuclear Scattering . . . . .	134
3.17	Refractive Effects . . . . .	135
3.18	Flavour-Changing Neutral Current . . . . .	137
<b>4</b>	<b>Neutrino Sources and Detection . . . . .</b>	<b>143</b>
4.1	Reactor Neutrinos . . . . .	143
4.2	Accelerator Neutrinos . . . . .	145
4.3	Atmospheric Neutrinos . . . . .	148
4.4	Neutrinos from Stars . . . . .	160
4.4.1	Theory of Stars: Fundamental Equations . . . . .	160
4.4.2	Theory of Stars: Simple Solutions . . . . .	163
4.4.3	Nuclear Reactions in Stars and Neutrino Emission: Formalism . . . . .	166
4.4.4	Nuclear Reactions in the Sun and Solar Neutrinos . .	168

4.4.5	Accurate Modelling of the Sun . . . . .	176
4.4.6	Solar Neutrino Problem . . . . .	183
4.4.7	Neutrino Energy Losses . . . . .	186
4.4.8	Evolution from the Main Sequence . . . . .	190
4.4.9	White Dwarfs . . . . .	194
4.5	Neutrinos from Type II Supernovae . . . . .	196
4.5.1	Stellar Core Collapse: Type II Supernovae . . . . .	196
4.5.2	Supernova Rate and Relic Neutrinos . . . . .	204
4.6	Neutrinos in Cosmology . . . . .	206
4.6.1	Elements of Cosmology . . . . .	206
4.6.2	Radiation-Dominated Universe and the Thermal History . . . . .	208
4.6.3	Universe in the Matter-Dominated Epoch . . . . .	216
4.7	Geophysical Neutrinos . . . . .	224
4.8	Detection of Low-Energy Neutrinos . . . . .	227
4.8.1	Overview of Neutrino Detectors . . . . .	227
4.8.2	Detection of Electrons: Čerenkov Light . . . . .	228
4.8.3	Detection of Electrons: Scintillation . . . . .	233
4.8.4	Background to Electron Detection . . . . .	239
4.8.5	Radiochemical Detection . . . . .	243
4.8.6	Other Types of Experiments . . . . .	248
4.9	Other Astrophysical Sources of Neutrinos . . . . .	250
4.9.1	Neutrino from Dark Matter Annihilation . . . . .	250
4.9.2	Ultra-High-Energy Neutrinos . . . . .	252
<b>5</b>	<b>Properties of the Neutrino . . . . .</b>	<b>255</b>
5.1	Electromagnetic Properties . . . . .	255
5.1.1	Electromagnetic Form Factors . . . . .	255
5.1.2	Electric Charge . . . . .	256
5.1.3	Magnetic and Electric Dipole Moments . . . . .	259
5.1.4	Charge Radius . . . . .	261
5.2	Limit on the Mass of Neutrinos . . . . .	262
5.3	Neutrino Mass: Cosmological and Astrophysical Considerations . . . . .	267
	Appendix: Cosmological Limits on the Mass of Heavy ‘Neutrinos’ .	271
<b>6</b>	<b>Massive Neutrinos . . . . .</b>	<b>273</b>
6.1	Massive Neutrinos – Overview . . . . .	273
6.2	Dirac Matrices . . . . .	274
6.3	Massless Neutrinos . . . . .	276
6.4	Massive Majorana Neutrinos . . . . .	277
6.5	Massive Dirac Neutrinos . . . . .	278
6.6	Massive Neutrinos in the Weinberg–Salam Theory . . . . .	278
6.7	Seesaw Mechanism . . . . .	279
6.8	Majoron Model . . . . .	281

6.9	Neutrino Mass Induced by Radiative Corrections . . . . .	283
6.10	Models for Dirac Neutrinos . . . . .	284
6.11	Pontecorvo's Neutrino Oscillation . . . . .	286
<b>7</b>	<b>Quantisation of the Majorana Field . . . . .</b>	<b>289</b>
7.1	Necessity of Quantisation . . . . .	289
7.2	Unitary Equivalence of the Majorana and the Weyl Fields . . . . .	289
7.3	Quantisation of Majorana Fermions . . . . .	292
7.4	Simple Derivation of Feynman Propagators . . . . .	296
7.5	Simple Examples of Applications . . . . .	297
7.5.1	$N \rightarrow e_L^- + \varphi^{(+)}$ . . . . .	297
7.5.2	$N + N \rightarrow e_L^- + e_L^+$ . . . . .	299
7.6	Double Beta Decay . . . . .	301
7.6.1	$0\nu 2\beta$ Decay Rate . . . . .	302
7.6.2	$2\nu 2\beta$ Decay . . . . .	305
7.6.3	Nuclear Matrix Elements . . . . .	307
7.6.4	Experimental Techniques . . . . .	313
7.6.5	Limit on the Majorana Neutrino Mass . . . . .	315
7.6.6	Several Remarks Concerning Double Beta Decay . . . . .	317
<b>8</b>	<b>Generation Mixing of Neutrinos . . . . .</b>	<b>321</b>
8.1	Generation Mixing – the Case of Dirac Neutrinos . . . . .	321
8.2	Generation Mixing – the Case of Majorana Neutrinos . . . . .	323
8.3	Phases of Mixing Matrices . . . . .	324
8.4	Neutrino Oscillation in Vacuum . . . . .	327
8.4.1	Formulation . . . . .	327
8.4.2	Neutrino Oscillation and the Uncertainty Principle . . . . .	330
8.4.3	$\nu_L \rightarrow \nu_R^c$ Oscillation . . . . .	334
8.5	Experimental Test for Neutrino Oscillation . . . . .	335
8.5.1	Survey . . . . .	335
8.5.2	Atmospheric Neutrino Oscillation Experiments . . . . .	338
8.5.3	Reactor Experiments with an Extended Baseline . . . . .	345
8.5.4	Long-Baseline Accelerator Experiments . . . . .	346
8.5.5	Neutrino Oscillation in Solar Neutrinos . . . . .	346
8.6	Neutrino Oscillation in Matter . . . . .	348
8.6.1	Neutrino Conversion . . . . .	348
8.6.2	Derivation of the Transition Probability . . . . .	353
8.6.3	Derivation of the Landau–Zener Formula . . . . .	355
8.6.4	Slab Model . . . . .	358
8.6.5	The MSW Effect in the Solar-Neutrino Problem . . . . .	359
8.7	The Effect of Earth on Neutrino Propagation . . . . .	363
8.8	Solar Neutrino Analysis: Latest Results . . . . .	369
8.9	Other Applications of the MSW Effect . . . . .	373
8.10	Neutrino Oscillation: Summary . . . . .	377
8.10.1	Present Status . . . . .	377

8.10.2	Future Neutrino Experiments . . . . .	379
8.11	CP Violation . . . . .	380
8.11.1	CP Violation in Neutrino Oscillation . . . . .	380
8.11.2	CP-Violation Characteristic of the Majorana Phase . . . . .	384
<b>9</b>	<b>Models for Massive Neutrinos . . . . .</b>	<b>387</b>
9.1	Beyond the Standard Model . . . . .	387
9.2	Classification of Models for Neutrino Mass . . . . .	391
9.3	Grand Unification: Introduction . . . . .	394
9.3.1	SU(5) GUT . . . . .	394
9.3.2	SUSY SU(5) GUT . . . . .	402
9.3.3	Introduction of $B-L$ and Massive Neutrinos . . . . .	409
9.3.4	Constraints on U(1) Symmetry Breaking: Cosmic String Formation . . . . .	409
9.4	Left–Right Symmetry Model . . . . .	410
9.5	Left–Right Symmetry in SO(10) . . . . .	414
9.6	General Discussion of SO(10) Grand Unification . . . . .	421
9.6.1	Symmetry-Breaking Pattern and the Neutrino Mass . .	421
9.6.2	Prediction of the Mass Scale . . . . .	423
9.6.3	Phenomenology with SO(10) GUT . . . . .	428
9.7	Model with Horizontal Gauge Symmetry . . . . .	430
9.8	Seesaw Mechanism with Global Symmetry . . . . .	431
9.8.1	Model with U(1) Symmetry . . . . .	431
9.8.2	Model with Family Symmetry . . . . .	432
9.8.3	Model for the Fourth-Generation Neutrino . . . . .	434
9.9	Peccei–Quinn Symmetry and the Neutrino Mass . . . . .	436
9.9.1	Strong CP Problem and Peccei–Quinn Symmetry . .	436
9.9.2	Model for the Neutrino Mass . . . . .	438
9.9.3	Astrophysical and Cosmological Constraints . . . . .	439
9.9.4	Domain Wall Problem . . . . .	442
9.10	Heuristic Models for the Neutrino Mass Matrix . . . . .	443
9.10.1	Model of Froggatt and Nielsen . . . . .	444
9.10.2	Democratic Mass Matrix . . . . .	447
9.10.3	Models for Other Textures . . . . .	449
9.11	Neutrino Mass Matrix from Radiative Corrections . . . . .	453
9.12	Brief Assessment of Models . . . . .	454
	Appendix: Representation of SO(10) group . . . . .	455
<b>10</b>	<b>Magnetic Moment of the Neutrino . . . . .</b>	<b>461</b>
10.1	Neutrino Magnetic Moment in the Weinberg–Salam Model . .	461
10.2	Neutrino Magnetic Moment in the Left–Right Symmetric Model . . . . .	464
10.3	Model with a Charged Scalar Particle . . . . .	469
10.4	Variants of the Scalar Model . . . . .	476
10.4.1	Voloshin’s Symmetry . . . . .	477

10.4.2	Helicity Suppression Mechanism . . . . .	478
10.5	Astrophysical Significance of the Neutrino Magnetic Moment . . . . .	479
10.5.1	Solar Neutrino Problem . . . . .	479
10.5.2	Neutrino Radiative Decay and Cosmology . . . . .	483
10.5.3	Neutrino Magnetic Moment and the Early Universe . . . . .	485
<b>11</b>	<b>Baryon Asymmetry in the Universe and Neutrinos . . . . .</b>	<b>487</b>
11.1	Introduction . . . . .	487
11.2	Sphaleron-Induced Baryon-Number Violation . . . . .	489
11.2.1	Instanton-Induced Baryon-Number Nonconservation . .	489
11.2.2	$B$ Violation in Minkowski Space-Time . . . . .	491
11.2.3	Sphalerons . . . . .	492
11.2.4	The Rate of the $B$ -Violating Process . . . . .	493
11.2.5	Constraints on $B - L$ Violating Interactions . . . . .	496
11.2.6	Electroweak Baryogenesis . . . . .	499
11.3	Baryon-Number Production with GUT . . . . .	501
11.4	Leptogenesis from Heavy Majorana Neutrinos . . . . .	505
11.5	Affleck–Dine Baryogenesis and Its Variants . . . . .	510
11.6	Summary . . . . .	515
<b>Note Added in Proof . . . . .</b>	<b>517</b>	
<b>References . . . . .</b>	<b>521</b>
