| | |
|--|-----|
| 1. Overview | 1 |
| <i>Horst Loch</i> | |
| 1.1 Introduction | 1 |
| 1.2 Systematics and Boundary Conditions of This Book | 3 |
| 1.3 Some Important 3D Continuum Equations | 6 |
| References | 15 |
| 2. Melting and Fining | 17 |
| 2.1 Modeling of the Melting Process in Industrial Glass Furnaces | |
| <i>Ruud G.C. Beerkens</i> | |
| 2.1.1 Application of Process Simulation Models for Glass Furnaces | 17 |
| 2.1.2 Modeling of Heat Transfer and Convection Flows in Glass-Melting Tanks | 18 |
| 2.1.3 Sand-Grain Dissolution, Behavior of Gas Bubbles in Glass Melts, and Glass-Quality Index | 23 |
| 2.1.4 Models for Evaporation and Superstructure Refractory Attack by Vapors | 47 |
| 2.1.5 Dynamic Modeling | 61 |
| 2.1.6 Concluding Remarks | 71 |
| 2.2 Mathematical Modeling of Batch Melting in Glass Tanks | 72 |
| <i>Wolf S. Kuhn</i> | |
| 2.2.1 Motivation and Requirements on Batch Modeling | 73 |
| 2.2.2 Survey of Batch Melting | 74 |
| 2.2.3 Theoretical Basis of Batch Modeling | 76 |
| 2.2.4 Key Values and Non-Dimensional Numbers | 93 |
| 2.2.5 Batch Models | 105 |
| 2.3 High-Frequency Melting of Glass in Crucibles | 110 |
| <i>Frank-Thomas Lentz</i> | |
| 2.3.1 Basics of Electrodynamics | 126 |
| 2.3.2 Mathematical Formulation of the Simulation Model ... | 126 |
| 2.3.3 Simulation Results | 129 |
| 2.3.4 Conclusion and Outlook | 134 |

| | | |
|-----------|---|------------|
| 2.4 | Model-Based Glass Melter Control | |
| | <i>Ton Backx</i> | 137 |
| 2.4.1 | Model Concepts | 138 |
| 2.4.2 | Model-Predictive Control | 142 |
| 2.4.3 | Extensions of the MPC Technology | 148 |
| 2.4.4 | Application of MPC in the Glass Industry | 150 |
| | References | 155 |
| 3. | Homogenizing and Conditioning | 165 |
| 3.1 | The Intensity of Mixing Processes | |
| | <i>Henry Eisermann, Ulrich Lange, Horst Loch,</i> <i>Günter Weidmann</i> | 165 |
| 3.1.1 | Description and Quantification of Mixing Processes | 165 |
| 3.1.2 | Flows and Particle Paths in Stirrers | 169 |
| 3.1.3 | Statistics of Residence Time and Dispersion | 173 |
| 3.1.4 | Deformation of Infinitesimal Test Bodies | |
| | Along Particle Paths | 176 |
| 3.1.5 | Deformation Statistics | 187 |
| 3.1.6 | Example: a Simple Paddle Stirrer | 189 |
| 3.1.7 | Outlook | 192 |
| 3.2 | Instabilities and Stabilization of Glass Pipe Flows | |
| | <i>Ulrich Lange, Horst Loch</i> | 193 |
| 3.2.1 | Stationary Temperature and Pressure Profiles | |
| | in the Pipe | 193 |
| 3.2.2 | A Stability Phenomenon | 197 |
| 3.2.3 | Appendix: Derivation of Several Equations | 205 |
| 3.3 | Shape Optimization of Flanges | |
| | <i>Norbert Siedow, Horst Loch, Sandro Manservigi</i> | 208 |
| 3.3.1 | General Shape Optimization: | |
| | Continuously Varying Thicknesses and Contours | 209 |
| 3.3.2 | Finite-Dimensional Shape Optimization: | |
| | the 3-Ring/Spoke Flange | 230 |
| | References | 237 |
| 4. | Shaping at Low Viscosities | 239 |
| 4.1 | Heat Transfer Between Glass and Mold During Hot Forming | |
| | <i>Matthias Brinkmann, Norbert Siedow</i> | 239 |
| 4.1.1 | Heat Transfer Coefficient Between Glass and Mold | 241 |
| 4.1.2 | Physics and Mathematics of the Heat Transfer | 245 |
| 4.1.3 | Sample Computations | 252 |
| 4.1.4 | Radiative Contributions to the Heat Transfer | 255 |
| 4.1.5 | Laboratory Experiments | 259 |
| 4.2 | Remote Spectral Temperature Profile Sensing | |
| | <i>Matthias Brinkmann, Norbert Siedow, Thomas Korb</i> | 262 |
| 4.2.1 | Thermal Radiation in Hot Glass | 263 |

| | | |
|-----------|--|------------|
| 4.2.2 | The Inverse Problem of Spectral Temperature Sensing | 266 |
| 4.2.3 | Sample Computations | 273 |
| 4.2.4 | Laboratory Experiment | 275 |
| 4.2.5 | Spectral Imaging of Hot Glass | 279 |
| 4.3 | Heat Transfer During Casting Experiments <i>Matthias Brinkmann, Thomas Korb</i> | 286 |
| 4.3.1 | Experimental Set-Up | 287 |
| 4.3.2 | Comparison Between “Exact” Modeling and Measurement | 289 |
| 4.3.3 | Alternative Modeling Using the Active Thermal Conductivity | 290 |
| 4.4 | Thin-Layer Flows of Glass <i>Ulrich Lange</i> | 293 |
| 4.4.1 | Example of a Thin-Layer Model | 294 |
| 4.4.2 | Simplified Energy Balance | 298 |
| 4.4.3 | Validation of the Model | 300 |
| 4.4.4 | Fiber- and Tube-Drawing Models | 302 |
| 4.4.5 | More Comprehensive Thin-Layer Flow Models | 305 |
| 4.5 | Pressing of Drinking-Glass Stems <i>Günter Weidmann, Kurt Holtberg, Henry Eisermann</i> | 306 |
| 4.5.1 | Model 1: Finite-Element Modeling | 309 |
| 4.5.2 | Model 2: Analytical Modeling | 310 |
| 4.5.3 | Comparison of Model 1 and Model 2 | 316 |
| 4.6 | The Use of Remeshing Methods in Pressing Simulations <i>Ulrich Lange</i> | 317 |
| 4.6.1 | Some Technical Aspects of the Method | 319 |
| 4.6.2 | Example: Pressing of a Tumbler | 320 |
| 4.6.3 | Example: Pressing of an “Axisymmetric TV Screen” | 321 |
| 4.7 | Chill Ripples in Pressing and Casting Processes <i>Ulrich Lange</i> | 326 |
| 4.7.1 | A Simple Casting Process | 328 |
| 4.7.2 | A Model for Kluge’s Experimental Set-Up | 330 |
| | References | 335 |
| 5. | Reshaping at High Viscosities | 339 |
| 5.1 | Temperature-Dependent Elasticity in Reshaping Simulations <i>Thoralf Johansson, Ulrich Fotheringham</i> | 339 |
| 5.1.1 | Model | 339 |
| 5.1.2 | Simulation Results | 341 |
| 5.2 | Sagging and Pressing of Glass Sheets <i>Thoralf Johansson</i> | 343 |
| 5.2.1 | Model and Boundary Conditions | 344 |
| 5.2.2 | Results of the Model Computations | 345 |

| | | |
|-----------|--|------------|
| 5.3 | Calibration of Glass Tubes | |
| | <i>Thoralf Johansson</i> | 349 |
| 5.3.1 | Model Description | 349 |
| 5.3.2 | Results of the Model Computations | 350 |
| 6. | Thermal Treatment | 359 |
| 6.1 | Verification of Relaxation Models | |
| | <i>Peter Thomas, Clemens Kunisch</i> | 359 |
| 6.1.1 | Mathematical Models | 359 |
| 6.1.2 | Experiments in the Lehr | 362 |
| 6.1.3 | Simulation | 363 |
| 6.1.4 | Measuring Stress and Compaction | 363 |
| 6.1.5 | Results | 363 |
| 6.2 | Stresses and Crack Growth in Continuously Formed Slabs | |
| | <i>Clemens Kunisch</i> | 367 |
| 6.2.1 | Cooling a Continuous Strip | 369 |
| 6.2.2 | Crack Growth | 370 |
| 6.2.3 | Modified Temperature Program in Order to Avoid Cracking | 371 |
| 6.2.4 | Cutting the Strip into Slabs | 372 |
| 6.3 | Thermal Tempering of Drinking Glasses | |
| | <i>Volker Seibert, Andreas Bensberg</i> | 374 |
| 6.3.1 | Principles of Thermal Tempering | 375 |
| 6.3.2 | Results for Spatially Inhomogeneous Quenching | 376 |
| 6.3.3 | Realization of a Quenching Process | 378 |
| 7. | Post-Processing by Laser Cutting | 381 |
| | <i>Kurt Nattermann, Christoph Hermanns</i> | |
| 7.1 | Rough Estimation of Process Parameters | 381 |
| 7.1.1 | Stress Levels | 381 |
| 7.1.2 | Laser-Beam Profiling | 382 |
| 7.1.3 | Selection of Laser | 384 |
| 7.2 | Numerical Analysis of Cutting Processes | 385 |
| 7.2.1 | Calculation of Temperature Distributions | 386 |
| 7.2.2 | Calculation of Stress Distributions | 391 |
| 7.2.3 | Condition for Cut Elongation | 396 |
| 7.2.4 | Calculation of Stress Intensities for Laser Cutting | 399 |
| 7.3 | Practical Realization | 404 |
| 7.4 | Appendix: Fundamentals of Fracture Mechanics | 408 |
| 7.4.1 | Fracture Mechanics for Brittle Solids | 408 |
| 7.4.2 | FEA Calculation of Stress-Intensity Factors | 410 |
| 7.4.3 | Prediction of the Crack Path | 411 |

8. Glass Products Under Mechanical and Thermal Loads 413

8.1 Strength Optimization of Airbag Igniters
Kurt Nattermann, Harald Krümmel, Ludwig Frank 413

8.1.1 FEA for Axial-Symmetric Models 413

8.1.2 FEA of 3D Models 420

8.1.3 Pull-Out Tests 423

8.1.4 Push-Out Tests 432

8.1.5 Pressure Tests 435

8.1.6 Appendix: Statistical Procedure 437

8.2 Stiffness and Weight Optimization of a Reticle Stage
for Optical Lithography
Volker Seibert 438

8.2.1 Requirements for a (9 × 9)'' Reticle Stage 439

8.2.2 Design of a Prototype 440

8.2.3 FEM Optimization Without Additional Masses 442

8.2.4 FEM Analysis With Additional Masses 444

References 446

9. Simulation and Test of the Spinning Process Applied to Platinum Metals 449

Seth Nzahumunyurwa, Hans-Jürgen Hoffmann, Hans Oechsner, Joachim Disam

9.1 Necessity to Shape Materials 449

9.2 Qualitative Description of the Spinning Process 449

9.3 Essential Assumptions for the Modeling
of the Spinning Process 451

9.4 General Relations for the Model of the
Spinning Process 453

9.5 Approximations 455

9.5.1 First Approximation:
Quasi-Homogeneous Deformation 455

9.5.2 Second Approximation:
Linearly Decreasing Deformation 458

9.6 A Practical Example
for the First and Second Approximations 460

9.7 Experimental Observations and Discussion 464
