

Table of Contents

Simultaneous Relevant Feature Identification and Classification in High-Dimensional Spaces	1
<i>L.R. Grate (Lawrence Berkeley National Laboratory), C. Bhattacharyya, M.I. Jordan, and I.S. Mian (University of California Berkeley)</i>	
Pooled Genomic Indexing (PGI): Mathematical Analysis and Experiment Design	10
<i>M. Csűrös (Université de Montréal), and A. Milosavljevic (Human Genome Sequencing Center)</i>	
Practical Algorithms and Fixed-Parameter Tractability for the Single Individual SNP Haplotyping Problem	29
<i>R. Rizzi (Università di Trento), V. Bafna, S. Istrail (Celera Genomics), and G. Lancia (Università di Padova)</i>	
Methods for Inferring Block-Wise Ancestral History from Haploid Sequences	44
<i>R. Schwartz, A.G. Clark (Celera Genomics), and S. Istrail (Celera Genomics)</i>	
Finding Signal Peptides in Human Protein Sequences Using Recurrent Neural Networks	60
<i>M. Reczko (Synaptic Ltd.), P. Fiziev, E. Staub (metaGen Pharmaceu- ticals GmbH), and A. Hatzigeorgiou (University of Pennsylvania)</i>	
Generating Peptide Candidates from Amino-Acid Sequence Databases for Protein Identification via Mass Spectrometry	68
<i>N. Edwards and R. Lippert (Celera Genomics)</i>	
Improved Approximation Algorithms for NMR Spectral Peak Assignment .	82
<i>Z.-Z. Chen (Tokyo Denki University), T. Jiang (University of Califor- nia, Riverside), G. Lin (University of Alberta), J. Wen (University of California, Riverside), D. Xu, and Y. Xu (Oak Ridge National Labo- ratory)</i>	
Efficient Methods for Inferring Tandem Duplication History	97
<i>L. Zhang (Nat. University of Singapore), B. Ma (University of Western Ontario), and L. Wang (City University of Hong Kong)</i>	
Genome Rearrangement Phylogeny Using Weighbor	112
<i>L.-S. Wang (University of Texas at Austin)</i>	

Segment Match Refinement and Applications	126
<i>A.L. Halpern (Celera Genomics), D.H. Huson (Tübingen University), and K. Reinert (Celera Genomics)</i>	
Extracting Common Motifs under the Levenshtein Measure: Theory and Experimentation	140
<i>E.F. Adebisi and M. Kaufmann (Universität Tübingen)</i>	
Fast Algorithms for Finding Maximum-Density Segments of a Sequence with Applications to Bioinformatics	157
<i>M.H. Goldwasser (Loyola University Chicago), M.-Y. Kao (Northwest- ern University), and H.-I. Lu (Academia Sinica)</i>	
FAUST: An Algorithm for Extracting Functionally Relevant Templates from Protein Structures	172
<i>M. Milik, S. Szalma, and K.A. Olszewski (Accelrys)</i>	
Efficient Unbound Docking of Rigid Molecules	185
<i>D. Duhovny, R. Nussinov, and H.J. Wolfson (Tel Aviv University)</i>	
A Method of Consolidating and Combining EST and mRNA Alignments to a Genome to Enumerate Supported Splice Variants	201
<i>R. Wheeler (Affymetrix)</i>	
A Method to Improve the Performance of Translation Start Site Detection and Its Application for Gene Finding	210
<i>M. Pertea and S.L. Salzberg (The Institute for Genomic Research)</i>	
Comparative Methods for Gene Structure Prediction in Homologous Sequences	220
<i>C.N.S. Pedersen and T. Scharling (University of Aarhus)</i>	
MultiProt – A Multiple Protein Structural Alignment Algorithm	235
<i>M. Shatsky, R. Nussinov, and H.J. Wolfson (Tel Aviv University)</i>	
A Hybrid Scoring Function for Protein Multiple Alignment	251
<i>E. Rocke (University of Washington)</i>	
Functional Consequences in Metabolic Pathways from Phylogenetic Profiles	263
<i>Y. Bilu and M. Linial (Hebrew University)</i>	
Finding Founder Sequences from a Set of Recombinants	277
<i>E. Ukkonen (University of Helsinki)</i>	
Estimating the Deviation from a Molecular Clock	287
<i>L. Nakhleh, U. Roshan (University of Texas at Austin), L. Vawter (Aventis Pharmaceuticals), and T. Warnow (University of Texas at Austin)</i>	

Exploring the Set of All Minimal Sequences of Reversals – An Application to Test the Replication-Directed Reversal Hypothesis	300
<i>Y. Ajana, J.-F. Lefebvre (Université de Montréal), E.R.M. Tillier (University Health Network), and N. El-Mabrouk (Université de Montréal)</i>	
Approximating the Expected Number of Inversions Given the Number of Breakpoints	316
<i>N. Eriksen (Royal Institute of Technology)</i>	
Invited Lecture – Accelerating Smith-Waterman Searches	331
<i>G. Myers (Celera Genomics) and R. Durbin (Sanger Centre)</i>	
Sequence-Length Requirements for Phylogenetic Methods	343
<i>B.M.E. Moret (University of New Mexico), U. Roshan, and T. Warnow (University of Texas at Austin)</i>	
Fast and Accurate Phylogeny Reconstruction Algorithms Based on the Minimum-Evolution Principle	357
<i>R. Desper (National Library of Medicine, NIH) and O. Gascuel (LIRMM)</i>	
NeighborNet: An Agglomerative Method for the Construction of Planar Phylogenetic Networks	375
<i>D. Bryant (McGill University) and V. Moulton (Uppsala University)</i>	
On the Control of Hybridization Noise in DNA Sequencing-by-Hybridization	392
<i>H.-W. Leong (National University of Singapore), F.P. Preparata (Brown University), W.-K. Sung, and H. Willy (National University of Singapore)</i>	
Restricting SBH Ambiguity via Restriction Enzymes	404
<i>S. Skiena (SUNY Stony Brook) and S. Snir (Technion)</i>	
Invited Lecture – Molecule as Computation: Towards an Abstraction of Biomolecular Systems	418
<i>E. Shapiro (Weizmann Institute)</i>	
Fast Optimal Genome Tiling with Applications to Microarray Design and Homology Search	419
<i>P. Berman (Pennsylvania State University), P. Bertone (Yale University), B. DasGupta (University of Illinois at Chicago), M. Gerstein (Yale University), M.-Y. Kao (Northwestern University), and M. Snyder (Yale University)</i>	
Rapid Large-Scale Oligonucleotide Selection for Microarrays	434
<i>S. Rahmann (Max-Planck-Institute for Molecular Genetics)</i>	

Border Length Minimization in DNA Array Design 435
A.B. Kahng, I.I. Măndoiu, P.A. Pevzner, S. Reda (University of California at San Diego), and A.Z. Zelikovsky (Georgia State University)

The Enhanced Suffix Array and Its Applications to Genome Analysis 449
M.I. Abouelhoda, S. Kurtz, and E. Ohlebusch (University of Bielefeld)

The Algorithmic of Gene Teams 464
A. Bergeron (Université du Québec a Montreal), S. Corteel (CNRS - Université de Versailles), and M. Raffinot (CNRS - Laboratoire Génome et Informatique)

Combinatorial Use of Short Probes
for Differential Gene Expression Profiling 477
L.L. Warren and B.H. Liu (North Carolina State University)

Designing Specific Oligonucleotide Probes
for the Entire *S. cerevisiae* Transcriptome 491
D. Lipson (Technion), P. Webb, and Z. Yakhini (Agilent Laboratories)

K-ary Clustering with Optimal Leaf Ordering for Gene Expression Data . . 506
Z. Bar-Joseph, E.D. Demaine, D.K. Gifford (MIT LCS), A.M. Hamel (Wilfrid Laurier University), T.S. Jaakkola (MIT AI Lab), and N. Srebro (MIT LCS)

Inversion Medians Outperform Breakpoint Medians
in Phylogeny Reconstruction from Gene-Order Data 521
B.M.E. Moret (University of New Mexico), A.C. Siepel (University of California at Santa Cruz), J. Tang, and T. Liu (University of New Mexico)

Modified Mincut Supertrees 537
R.D.M. Page (University of Glasgow)

Author Index 553
