Contents

1. The Introduction of Quarks 1
1.1 The Hadron Spectrum 1

2. Review of Relativistic Field Theory 17
2.1 Spinor Quantum Electrodynamics 17
2.1.1 The Free Dirac Equation and Its Solution 17
2.1.2 Density and Current Density 20
2.1.3 Covariant Notation 21
2.1.4 Normalization of Dirac Spinors 21
2.1.5 Interaction with a Four-Potential A^μ 23
2.1.6 Transition Amplitudes 24
2.1.7 Discrete Symmetries 24
2.2 Scalar Quantum Electrodynamics 25
2.2.1 The Free Klein–Gordon Equation and its Solutions . . 25
2.2.2 Interaction of a π^+ with a Potential A^μ 28
2.2.3 π^+K^+ Scattering 31
2.2.4 The Cross Section 34
2.2.5 Spin-1 Particles and Their Polarization 45
2.2.6 The Propagator for Virtual Photons 51
2.3 Fermion–Boson and Fermion–Fermion Scattering 56
2.3.1 Traces and Spin Summations 58
2.3.2 The Structure of the Form Factors from Invariance Considerations 68

3. Scattering Reactions and the Internal Structure of Baryons 75
3.1 Simple Quark Models Compared 75
3.2 The Description of Scattering Reactions 78
3.3 The MIT Bag Model 123

4. Gauge Theories and Quantum-Chromodynamics 153
4.1 The Standard Model: A Typical Gauge Theory 153
4.2 The Gauge Theory of Quark–Quark Interactions 163
4.3 Dimensional Regularization 182
4.4 The Renormalized Coupling Constant of QCD 200
4.5 Extended Example: Anomalies in Gauge Theories 217
4.5.1 The Schwinger Model on the Circle 217
4.5.2 Dirac Sea 219

4.5.3 Ultraviolet Regularization 221
4.5.4 Standard Derivation 225
4.5.5 Anomalies in QCD 227
4.5.6 The Axial and Scale Anomalies 228
4.5.7 Multiloop Corrections 234

5. Perturbative QCD I: Deep Inelastic Scattering 237
5.1 The Gribov–Lipatov–Altarelli–Parisi Equations 237
5.2 An Alternative Approach to the GLAP Equations 263
5.3 Common Parametrizations of the Distribution Functions and Anomalous Dimensions 279
5.4 Renormalization and the Expansion Into Local Operators 290
5.5 Calculation of the Wilson Coefficients 326
5.6 The Spin-Dependent Structure Functions 354

6. Perturbative QCD II: The Drell–Yan Process and Small-*x* Physics 385
6.1 The Drell–Yan Process 385
6.2 Small-*x* Physics 428

7. Nonperturbative QCD 439
7.1 Lattice QCD Calculations 440
7.1.1 The Path Integral Method 440
7.1.2 Expectation Values 445
7.1.3 QCD on the Lattice 447
7.1.4 Gluons on the Lattice 449
7.1.5 Integration in SU(2) 452
7.1.6 Discretization: Scalar and Fermionic Fields 454
7.1.7 Fermionic Path Integral 459
7.1.8 Monte Carlo Methods 461
7.1.9 Metropolis Algorithm 463
7.1.10 Langevin Algorithms 464
7.1.11 The Microcanonical Algorithm 466
7.1.12 Strong and Weak Coupling Expansions 472
7.1.13 Weak-Coupling Approximation 474
7.1.14 Larger Loops in the Limit of Weak and Strong Coupling 475
7.1.15 The String Tension 477
7.1.16 The Lattice at Finite Temperature 480
7.1.17 The Quark Condensate 483
7.1.18 The Polyakov Loop 485
7.1.19 The Center Symmetry 486
7.2 QCD Sum Rules 488

8. Phenomenological Models for Nonperturbative QCD Problems . . 513
8.1 The Ground State of QCD 513
8.2 The Quark–Gluon Plasma 528

Appendix 539
A The Group SU(N) 539
B Dirac Algebra in Dimension d 541
C Some Useful Integrals 544

Subject Index 547
