Invariant manifolds, asymptotic immersion and the (adaptive) stabilization of nonlinear systems	1
<i>Alessandro Astolfi, Romeo Ortega</i>	
1 Introduction	1
2 Asymptotic stabilization via immersion and invariance	4
3 Robustification <i>vis à vis</i> high order dynamics	6
4 Adaptive control via immersion and invariance	9
5 Conclusions and outlook	18
References	19
Robust control of a nonlinear fluidics problem	21
<i>Lubimor Baramov, Owen Tutty, Eric Rogers</i>	
1 Introduction	21
2 Mathematical models	22
3 Control design	28
4 Results and conclusions	29
References	31
Optimal control of the Schrödinger equation with two or three levels	33
<i>Ugo Boscain, Grégoire Charlot, Jean-Paul Gauthier</i>	
1 Introduction	33
2 The two levels case	35
3 The resonant problem with three levels	37
4 The counter intuitive solutions	41
5 Conclusion	42
References	42
Strong robustness in adaptive control	45
<i>Maria Cadic, Jan Willem Polderman</i>	
1 Introduction	45
2 General setup	46
3 Strong robustness and strongly robust stability radius	47
4 Existence of strongly robust sets	49
5 Strong robustness and open balls of systems	50
6 Conclusion	54
References	54

On composition of Dirac structures and its implications for control by interconnection	55
<i>Joaquín Cervera, Arjan J. van der Schaft, Alfonso Baños</i>	
1 Introduction	55
2 Parametrization of kernel/image representations	56
3 Dirac structures composition expression	58
4 Application example	61
5 Conclusions	62
References	63
Adaptive nonlinear excitation control of synchronous generators ..	65
<i>Gilney Damm, Riccardo Marino, Françoise Lamnabhi-Lagarrigue</i>	
1 Introduction	65
2 Dynamical model	66
3 Adaptive controller and main result	69
4 Simulation results	74
5 Conclusions	75
References	76
Parameter identification for nonlinear pneumatic cylinder actuators	77
<i>N.A. Daw, J. Wang, Q.H. Wu, J. Chen, and Y. Zhao</i>	
1 Introduction	77
2 Mathematical model of pneumatic actuators	78
3 Static friction measurement	81
4 Description of Genetic Algorithms for parameter identification	82
5 Experiment and simulation results	83
6 Conclusion	86
References	87
The quasi-infinite horizon approach to nonlinear model predictive control	89
<i>Rolf Findeisen, Frank Allgöwer</i>	
1 Introduction to nonlinear model predictive control	89
2 Quasi-infinite horizon NMPC	94
3 Some results on output feedback NMPC	98
4 Some remarks on the efficient numerical solution of NMPC	102
5 Application example—real-time feasibility of NMPC	103
6 Conclusions	104
References	105
State and parameter identification for nonlinear uncertain systems using variable structure theory	109
<i>Fabienne Floret-Pontet, Françoise Lamnabhi-Lagarrigue</i>	
1 Introduction	109
2 State identification	111

3 Parameter identification 115
 4 Simultaneous state and parameter identification 118
 5 Simulations results 119
 6 Conclusion 127
 References 128

Stabilizing memoryless controllers and controls with memory for a class of uncertain, bilinear systems with discrete and distributed delays 129

D.P. Goodall

1 Introduction 129
 2 Preliminaries and nomenclature 130
 3 Problem statement 130
 4 Hypotheses 131
 5 Stability results 133
 6 Example 136
 7 Concluding remarks 137
