## Contents

<b>1. Propagators and Scattering Theory . . . . .</b>	1
1.1 Introduction . . . . .	1
1.2 The Nonrelativistic Propagator . . . . .	2
1.3 Green's Function and Propagator . . . . .	3
1.4 An Integral Equation for $\psi$ . . . . .	7
1.5 Application to Scattering Problems . . . . .	12
1.6 The Unitarity of the $S$ Matrix . . . . .	21
1.7 Symmetry Properties of the $S$ Matrix . . . . .	22
1.8 The Green's Function in Momentum Representation and Its Properties . . . . .	25
1.9 Another Look at the Green's Function for Interacting Particles . . . . .	31
1.10 Biographical Notes . . . . .	40
<b>2. The Propagators for Electrons and Positrons . . . . .</b>	43
<b>3. Quantum-Electrodynamical Processes . . . . .</b>	83
3.1 Coulomb Scattering of Electrons . . . . .	83
3.2 Scattering of an Electron off a Free Proton: The Effect of Recoil . . . . .	103
3.3 Scattering of Identical Fermions . . . . .	141
3.4 Electron–Positron Scattering: Bhabha Scattering and Muon Pair Creation . . . . .	149
3.5 Scattering of Polarized Dirac Particles . . . . .	161
3.6 Bremsstrahlung . . . . .	168
3.7 Compton Scattering – The Klein–Nishina Formula . . . . .	189
3.8 Annihilation of Particle and Antiparticle . . . . .	203
3.9 Biographical Notes . . . . .	256
<b>4. Summary: The Feynman Rules of QED . . . . .</b>	259
4.1 The Feynman Rules of QED in Momentum Space . . . . .	260
4.2 The Photon Propagator in Different Gauges . . . . .	265
4.3 Biographical Notes . . . . .	269
<b>5. The Scattering Matrix in Higher Orders . . . . .</b>	271
5.1 Electron–Positron Scattering in Fourth Order . . . . .	271
5.2 Vacuum Polarization . . . . .	274
5.3 Self-Energy of the Electron . . . . .	309

5.4	The Vertex Correction . . . . .	316
5.5	Biographical Notes . . . . .	344
<b>6.</b>	<b>Two-Particle Systems</b> . . . . .	347
6.1	The Bethe–Salpeter Equation . . . . .	347
6.2	Biographical Notes . . . . .	379
<b>7.</b>	<b>Quantum Electrodynamics of Strong Fields</b> . . . . .	381
7.1	Strong Fields in Atoms . . . . .	385
7.2	Strong Fields in Heavy Ion Collisions . . . . .	415
7.3	The Effective Lagrangian of the Electromagnetic Field . . . . .	425
7.4	Biographical Notes . . . . .	447
<b>8.</b>	<b>Quantum Electrodynamics of Spinless Bosons</b> . . . . .	449
8.1	The Klein–Gordon Equation . . . . .	450
8.2	The Feynman Propagator for Scalar Particles . . . . .	452
8.3	The Scattering of Spin-0 Bosons . . . . .	453
8.4	The Feynman Rules of Scalar Electrodynamics . . . . .	459
<b>Appendix</b>	.....	467
<b>Index</b>	.....	469

---

## Contents of Examples and Exercises

1.1	Properties of $G$ . . . . .	5
1.2	Relation Between $G^+$ and $G^-$ . . . . .	16
1.3	The Free Green's Function and Its Properties . . . . .	18
1.4	An Integral Representation for the Step Function . . . . .	25
1.5	Green's Function for Diffusion . . . . .	32
1.6	Kirchhoff's Integral as an Example of Huygens' Principle in Electrodynamics . . . . .	35
2.1	Plane-Wave Decomposition of the Feynman Propagator . . . . .	53
2.2	Feynman Propagator for a Fermi Gas . . . . .	60
2.3	Nonrelativistic Limit of the Feynman Propagator . . . . .	68
2.4	Time-Evolution of Dirac Wave Functions . . . . .	70
2.5	The Explicit Form of $S_F(x)$ in Coordinate Space . . . . .	73
3.1	Calculation of a Useful Integral . . . . .	93
3.2	Lorentz Transformation of Plane Waves . . . . .	94
3.3	Traces and Identities Involving $\gamma$ Matrices . . . . .	96
3.4	Coulomb Scattering of Positrons . . . . .	100
3.5	Rosenbluth's Formula . . . . .	121
3.6	Higher-Order Electron-Proton Scattering . . . . .	130
3.7	Static Limit of the Two-Photon Exchange . . . . .	138
3.8	Mandelstam Variables Applied to Møller and Bhabha Scattering .	154
3.9	Degree of Polarization . . . . .	165
3.10	Static Limit of Bremsstrahlung . . . . .	181
3.11	The Bethe-Heitler Formula for Bremsstrahlung . . . . .	184
3.12	Relations of Energy and Momentum . . . . .	202
3.13	The Total Cross Section of Pair Annihilation . . . . .	209
3.14	Electron-Positron Annihilation in the Centre-of-Mass Frame . .	212
3.15	Pair Creation by Two Photons . . . . .	217
3.16	Pair Creation in the Field of an Atomic Nucleus . . . . .	220
3.17	The Method of Equivalent Photons . . . . .	224
3.18	Angular Integration of the Hadron Tensor . . . . .	235
3.19	Electron-Positron Pair Production in Intense Laser Fields . . .	237
3.20	Exact Solution of the Dirac Equation in the Field of a Travelling Wave . . . . .	250
4.1	Furry's Theorem . . . . .	263
4.2	Supplement: Systems of Units in Electrodynamics . . . . .	267

5.1	Evaluation of an Integral . . . . .	288
5.2	The Photon Polarization Function . . . . .	290
5.3	The Running Coupling Constant . . . . .	294
5.4	The Uehling Potential . . . . .	297
5.5	Muonic Atoms . . . . .	306
5.6	Gaussian Integrals . . . . .	308
5.7	The Form Factor of the Electron . . . . .	320
5.8	The Infrared Catastrophe . . . . .	329
5.9	The Energy Shift of Atomic Levels . . . . .	332
6.1	Solution of the Initial-Value Problem for Fermions . . . . .	356
6.2	The Bethe–Salpeter Equation for Positronium . . . . .	358
6.3	The Nonretarded Limit of the Bethe–Salpeter Equation . . . . .	364
6.4	The Breit Interaction . . . . .	370
6.5	Nonrelativistic Reduction of the Two-Body Equation Applied to Positronium . . . . .	374
7.1	The Wave Function at the Diving Point . . . . .	388
7.2	Fano’s Formalism for the Description of Resonances . . . . .	395
7.3	The Product of Two Principal-Value Poles . . . . .	403
7.4	Time-Dependent Decay of the Vacuum . . . . .	405
7.5	The Supercritical Point Charge . . . . .	411
7.6	An Alternative Derivation of the Effective Lagrangian . . . . .	437
7.7	The Solution of the Dirac Equation in a Homogeneous Magnetic Field . . . . .	440
7.8	Birefringence of the Vacuum in a Strong Magnetic Field . . . . .	442
8.1	Compton Scattering at Bosons . . . . .	460
8.2	The Electro-Production of Pion Pairs . . . . .	463
