## Invited Talks

|                                                                                           |    |
|-------------------------------------------------------------------------------------------|----|
| SFI: A Refinement Based Layered Software Architecture . . . . .                           | 1  |
| <i>Ralph-Johan Back</i>                                                                   |    |
| Developing Quality Software Systems<br>Using the SOFL Formal Engineering Method . . . . . | 3  |
| <i>Shaoying Liu</i>                                                                       |    |
| Maintaining Referential Integrity on the Web . . . . .                                    | 20 |
| <i>Mark A. Hale</i>                                                                       |    |
| Formal Methods in Enterprise Computing . . . . .                                          | 22 |
| <i>Richard Jüllig</i>                                                                     |    |
| Unifying Theories of Parallel Programming . . . . .                                       | 24 |
| <i>Jim Woodcock, Arthur Hughes</i>                                                        |    |

## Component Engineering and Software Architecture

|                                                                                                       |    |
|-------------------------------------------------------------------------------------------------------|----|
| ABC/ADL: An ADL Supporting Component Composition . . . . .                                            | 38 |
| <i>Hong Mei, Feng Chen, Qianxiang Wang, Yaodong Feng</i>                                              |    |
| The Description of CORBA Objects Based on Petri Nets . . . . .                                        | 48 |
| <i>Hong Zheng, Shi-xian Li</i>                                                                        |    |
| Toward a Formal Model of Software Components . . . . .                                                | 57 |
| <i>Maritta Heisel, Thomas Santen, Jeanine Souquières</i>                                              |    |
| A Specification-Based Software Construction Framework for Reuse . . . . .                             | 69 |
| <i>Jing Liu, Huaikou Miao, Xiaolei Gao</i>                                                            |    |
| Specifying a Component Model<br>for Building Dynamically Reconfigurable Distributed Systems . . . . . | 80 |
| <i>Xuejun Chen</i>                                                                                    |    |
| Three-Tiered Specification of Micro-architectures . . . . .                                           | 92 |
| <i>Vasu Alagar, Ralf Lämmel</i>                                                                       |    |
| Modeling the Architecture for Component-Based E-commerce System . . . .                               | 98 |
| <i>Jiayue Chang, Huadong Ma</i>                                                                       |    |

|                                                                                                                              |     |
|------------------------------------------------------------------------------------------------------------------------------|-----|
| Component Specification and Wrapper/Glue Code Generation<br>with Two-Level Grammar Using Domain Specific Knowledge . . . . . | 103 |
| <i>Fei Cao, Barrett R. Bryant, Rajeev R. Raje, Mikhail Auguston,<br/>Andrew M. Olson, Carol C. Burt</i>                      |     |

## Method Integration

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| Abstract Specification in Object-Z and CSP . . . . .                                 | 108 |
| <i>Graeme Smith, John Derrick</i>                                                    |     |
| Mechanization of an Integrated Approach:<br>Shallow Embedding into SAL/PVS . . . . . | 120 |
| <i>J. Christian Attiogbé</i>                                                         |     |

## Specification Techniques and Languages

|                                                                                                               |     |
|---------------------------------------------------------------------------------------------------------------|-----|
| Concept Use or Concept Refinement:<br>An Important Distinction in Building Generic Specifications . . . . .   | 132 |
| <i>David R. Musser, Zhiqing Shao</i>                                                                          |     |
| An Overview of Mobile Object-Z . . . . .                                                                      | 144 |
| <i>Kenji Taguchi, Jin Song Dong</i>                                                                           |     |
| Z Approach to Semantic Web . . . . .                                                                          | 156 |
| <i>Jin Song Dong, Jing Sun, Hai Wang</i>                                                                      |     |
| Hardware/Software Partitioning in Verilog . . . . .                                                           | 168 |
| <i>Shengchao Qin, Jifeng He, Zongyan Qiu, Naixiao Zhang</i>                                                   |     |
| A Formal Methodology to Specify E-commerce Systems . . . . .                                                  | 180 |
| <i>Adriano Pereira, Mark Song, Gustavo Gorgulho,<br/>Wagner Meira Jr., Sérgio Campos</i>                      |     |
| Model-Based Specification Animation Using Testgraphs . . . . .                                                | 192 |
| <i>Tim Miller, Paul Strooper</i>                                                                              |     |
| An Abstract Model for Scheduling Real-Time Programs . . . . .                                                 | 204 |
| <i>Alvaro E. Arenas</i>                                                                                       |     |
| A Specification and Validation Technique<br>Based on STATEMATE and FNLOG . . . . .                            | 216 |
| <i>Olfa Mosbahi, Leila Jemni, Samir Ben Ahmed, Jacques Jaray</i>                                              |     |
| Formal Representation and Analysis of Batch Stock Trading Systems<br>by Logical Petri Net Workflows . . . . . | 221 |
| <i>Yuyue Du, Changjun Jiang</i>                                                                               |     |
| A Calculus for Mobile Network Systems . . . . .                                                               | 226 |
| <i>Jinfeng Huang, Ad Verschueren, Henri Alderink, Johan Lukkien</i>                                           |     |

|                                                                                           |     |
|-------------------------------------------------------------------------------------------|-----|
| Modelling Real-Time Systems with Continuous-Time Temporal Logic . . . .                   | 231 |
| <i>Guangyuan Li, Zhisong Tang</i>                                                         |     |
| On Concept-Based Definition of Domain-Specific Languages . . . . .                        | 237 |
| <i>Ying Liu, Naixiao Zhang</i>                                                            |     |
| Formal Specification of Evolutionary Software Agents . . . . .                            | 249 |
| <i>Hong Zhu</i>                                                                           |     |
| Detecting Deadlock in Ada Rendezvous Flow Structure<br>Based on Process Algebra . . . . . | 262 |
| <i>Yuan Liu, Baowen Xu, Zhenqiang Chen</i>                                                |     |
| Formal Analysis of Real-Time Systems with SAM . . . . .                                   | 275 |
| <i>Huiqun Yu, Xudong He, Yi Deng, Lian Mo</i>                                             |     |

## Tools and Environments

|                                                                           |     |
|---------------------------------------------------------------------------|-----|
| Tool Support for Visualizing CSP in UML . . . . .                         | 287 |
| <i>Muan Yong Ng, Michael Butler</i>                                       |     |
| Theorem Prover Support for Precondition and Correctness Calculation . . . | 299 |
| <i>Orieta Celiku, Joakim von Wright</i>                                   |     |
| XML-Based Static Type Checking and Dynamic Visualization for TCOZ . .     | 311 |
| <i>Jin Song Dong, Yuan Fang Li, Jing Sun, Jun Sun, Hai Wang</i>           |     |

## Refinement

|                                                                         |     |
|-------------------------------------------------------------------------|-----|
| $\mu$ -Chart-Based Specification and Refinement . . . . .               | 323 |
| <i>Doug Goldson, Greg Reeve, Steve Reeves</i>                           |     |
| Towards a Refinement Calculus for Concurrent Real-Time Programs . . . . | 335 |
| <i>Sibylle Peuker, Ian Hayes</i>                                        |     |
| Refinement Algebra for Formal Bytecode Generation . . . . .             | 347 |
| <i>Adolfo Duran, Ana Cavalcanti, Augusto Sampaio</i>                    |     |

## Applications

|                                                             |     |
|-------------------------------------------------------------|-----|
| Formal Modelling of Java GUI Event Handling . . . . .       | 359 |
| <i>Jessica Chen</i>                                         |     |
| A New Algorithm for Service Interaction Detection . . . . . | 371 |
| <i>Ana Cavalli, Stéphane Maag</i>                           |     |
| Specification of an Asynchronous On-chip Bus . . . . .      | 383 |
| <i>Juha Plosila, Tiberiu Seculeanu</i>                      |     |
| Analysis of a Security Protocol in $\mu$ CRL . . . . .      | 396 |
| <i>Jun Pang</i>                                             |     |

Developing a Spell-Checker for Tajik Using RAISE . . . . . 401  
*Gafurov Davrondjon, Tomasz Janowski*

M2Z: A Tool for Translating a Natural Language Software Specification  
into Z . . . . . 406  
*Zarina Shukur, Abdullah Md. Zin, Ainita Ban*

**Validation and Verification**

Abstract Interpretation with a Theorem Prover . . . . . 411  
*Hugh Anderson*

Formal Reasoning about Hardware and Software Memory Models . . . . . 423  
*Abhik Roychoudhury*

Slicing Hierarchical Automata for Model Checking UML Statecharts . . . . . 435  
*Ji Wang, Wei Dong, Zhi-Chang Qi*

Formal Verification of a SONET Telecom System Block . . . . . 447  
*M. Hasan Zobair, Sofiène Tahar*

Enabling Hardware Verification through Design Changes . . . . . 459  
*Amr T. Abdel-Hamid, Sofiène Tahar, John Harrison*

Specification-Based Test Generation for Security-Critical Systems  
Using Mutations . . . . . 471  
*Guido Wimmel, Jan Jürjens*

A Formal Definition of Function Points  
for Automated Measurement of B Specifications . . . . . 483  
*Hassan Diab, Marc Frappier, Richard St-Denis*

Machine Code Type Safety . . . . . 495  
*Fan Guo, YiYun Chen, RongGui Hu*

**UML**

On the Formalized Semantics of Static Modeling Elements in UML . . . . . 500  
*Yan-Bing Jiang, Wei-Zhong Shao, Zhi-Yi Ma, Yao-Dong Feng*

From a B Specification to UML StateChart Diagrams . . . . . 511  
*Ahmed Hammad, Bruno Tatibouët,  
Jean-Christophe Voisinet, Wu Weiping*

Formalizing UML Models with Object-Z . . . . . 523  
*Huaikou Miao, Ling Liu, Li Li*

Using Transition Systems to Unify UML Models . . . . . 535  
*Zhiming Liu, Xiaoshan Li, Jifeng He*

|                                                                                                                          |            |
