Contents

1. Introduction 1
- 1.1 The Challenges of Controlling Robot Office Couriers 2
- 1.2 The Control Problem 4
- 1.3 The Computational Model 7
- 1.4 An Adaptive Robotic Office Courier 9
- 1.5 Previous Work 15
  - 1.5.1 Descriptive Models of Everyday Activity 15
  - 1.5.2 Computational Models of Everyday Activity 16
- 1.6 Contributions 18
- 1.7 Overview 20

2. Overview of the Control System 21
- 2.1 Abstract Models of Robotic Agents 21
  - 2.1.1 The Dynamic System Model 21
  - 2.1.2 Autonomous Robots as Rational Agents 24
  - 2.1.3 The BDI Model of Rational Agents 26
  - 2.1.4 Discussion of Our Robotic Agent Model 27
- 2.2 The Environment Maps 28
- 2.3 The Computational Structure of the Control System 30
  - 2.3.1 The Functional Layer 31
  - 2.3.2 The "Robotic Agent" Abstract Machine 36
  - 2.3.3 The Structured Reactive Controller 39

3. Plan Representation for Robotic Agents 43
- 3.1 Low-Level Integration of Mechanisms 46
  - 3.1.1 Navigation 47
  - 3.1.2 Communication Mechanisms 49
  - 3.1.3 Execution Time Planning 53
  - 3.1.4 Image Processing 55
  - 3.1.5 Summary of Low-Level Integration 58
- 3.2 Low-Level Plans 58
  - 3.2.1 Low-Level Navigation Plans 60
  - 3.2.2 Low-Level Image Processing Plans 62
  - 3.2.3 Low-Level Conversational Plans 66

3.2.4 Task-Specific Low-Level Plans 67
3.2.5 Summary of Low-Level Plans 68
3.3 Structured Reactive Plans 69
3.3.1 Properties of SRCs and Their Sub-plans 69
3.3.2 High-Level Navigation Plans 71
3.3.3 Structured Reactive Plans for Other Mechanisms 76
3.4 The Plan Adaptation Framework 76
3.4.1 Properties of Revision Rules and Revisable Plans 79
3.4.2 Revision Rules 80
3.5 Related Work on Plan Representation 83
3.6 Discussion 87

4. Probabilistic Hybrid Action Models 89
4.1 Projecting Delivery Tour Plans 90
4.2 Modeling Reactive Control Processes and Continuous Change 94
4.3 Probabilistic, Totally-Ordered Temporal Projection 98
4.3.1 Probabilistic Temporal Rules for PHAMs 102
4.3.2 Properties of PHAMs 104
4.4 The Implementation of PHAMs 106
4.4.1 Projection with Adaptive Causal Models 107
4.4.2 Endogenous Event Scheduler 111
4.4.3 Projecting Exogenous Events, Passive Sensors, and Obstacle Avoidance 113
4.4.4 Probabilistic Sampling-Based Projection 115
4.5 Evaluation 117
4.5.1 Generality 117
4.5.2 Scaling Up 118
4.5.3 Qualitatively Accurate Predictions 118
4.6 Related Work on Temporal Projection 119
4.7 Discussion 122

5. Learning Structured Reactive Navigation Plans 125
5.1 Navigation Planning as a Markov Decision Problem 125
5.2 An Overview on XFRMLEARN 126
5.3 Structured Reactive Navigation Plans 129
5.4 XFRMLEARN in Detail 130
5.4.1 The "Analyze" Step 131
5.4.2 The "Revise" Step 134
5.4.3 The "Test" Step 137
5.5 Experimental Results 138
5.5.1 The First Learning Experiment 138
5.5.2 The Second Learning Experiment 139
5.5.3 Discussion of the Experiments 139
5.6 Related Work on Learning Robot Plans 143
5.7 Discussion 146

6. Plan-Based Robotic Agents 147
6.1 A Robot Office Courier 147
6.1.1 The Plans of the Robot Courier 148
6.1.2 Plan Adaptors of the Robot Courier 149
6.1.3 Probabilistic Prediction-Based Schedule Debugging . . . 150
6.1.4 Demonstrations and Experiments 152
6.1.5 Prediction-Based Plan Management 155
6.2 A Robot Museums Tourguide 159
6.2.1 The Plans of the Tourguide Robot 160
6.2.2 Learning Tours and Tour Management 160
6.2.3 Demonstrations of the Tourguide Robot 161
6.3 A Robot Party Butler 162
6.4 Demonstrations of Integrated Mechanisms 162
6.4.1 Communication 162
6.4.2 Image Processing 164
6.4.3 Resource-Adaptive Search 165
6.4.4 Active Localization 168
6.5 Related Work on Plan-Based Robotic Agents 171
6.5.1 XAVIER 172
6.5.2 CHIP 173
6.5.3 Flakey 174
6.5.4 An Architecture for Autonomy 175
6.5.5 Remote Agent 176
6.6 Discussion 177

7. Conclusions 179
