

Table of Contents

Abbreviations	XVII
1. Abnormal Claisen rearrangement.....	1
2. Alder ene reaction	2
3. Aldol condensation.....	3
4. Allan–Robinson reaction.....	4
5. Alper carbonylation.....	6
6. Amadori rearrangement	8
7. Angeli–Rimini hydroxamic acid synthesis.....	9
8. ANRORC mechanism.....	10
9. Arndt–Eistert homologation.....	11
10. Auwers reaction	13
11. Baeyer–Drewson indigo synthesis	14
12. Baeyer–Villiger oxidation.....	16
13. Baker–Venkataraman rearrangement	17
14. Bamberger rearrangement	18
15. Bamford–Stevens reaction	19
16. Bargellini reaction.....	20
17. Bartoli indole synthesis	21
18. Barton decarboxylation	23
19. Barton–McCombie deoxygenation	24
20. Barton nitrite photolysis.....	25
21. Baylis–Hillman reaction.....	26
22. Beckmann rearrangement.....	28
23. Beirut reaction.....	29
24. Benzilic acid rearrangement.....	31
25. Benzoin condensation	32
26. Bergman cyclization.....	33
27. Biginelli pyrimidone synthesis.....	34
28. Birch reduction.....	36
29. Bischler–Möhlau indole synthesis	38
30. Bischler–Napieralski reaction	39
31. Blaise reaction.....	40
32. Blanc chloromethylation reaction	41
33. Boekelheide reaction.....	42
34. Boger pyridine synthesis	43
35. Boord reaction.....	44
36. Borsche–Drechsel cyclization	45
37. Boulton–Katritzky rearrangement.....	46
38. Bouveault aldehyde synthesis	47
39. Bouveault–Blanc reduction	48
40. Boyland–Sims oxidation	49
41. Bradsher reaction	51
42. Brook rearrangement.....	52

43.	Brown hydroboration reaction	53
44.	Bucherer carbazole synthesis	54
45.	Bucherer reaction	56
46.	Bucherer–Bergs reaction	57
47.	Buchner–Curtius–Schlotterbeck reaction	58
48.	Buchner method of ring expansion	59
49.	Buchwald–Hartwig C–N bond and C–O bond formation reactions	60
50.	Burgess dehydrating reagent	61
51.	Cadiot–Chodkiewicz coupling	62
52.	Cannizzaro disproportionation reaction	63
53.	Carroll rearrangement	65
54.	Castro–Stephens coupling	66
55.	Chapman rearrangement	67
56.	Chichibabin amination reaction	68
57.	Chichibabin pyridine synthesis	69
58.	Chugaev reaction	71
59.	Ciamician–Dennsted rearrangement	72
60.	Claisen condensation	73
61.	Claisen rearrangement	74
62.	Clarke–Eschweiler reductive alkylation of amines	76
63.	Clemmensen reduction	77
64.	Combes quinoline synthesis	79
65.	Conrad–Limpach reaction	81
66.	Cook–Heilbron thiazole synthesis	82
67.	Cope elimination reaction	83
68.	Cope, oxy-Cope, and anionic oxy-Cope rearrangements	84
69.	Corey–Bakshi–Shibata (CBS) reduction	86
70.	Corey–Chaykovsky reaction	88
71.	Corey–Fuchs reaction	90
72.	Corey–Kim oxidation	92
73.	Corey–Winter olefin synthesis	93
74.	Cornforth rearrangement	95
75.	Criegee glycol cleavage	96
76.	Criegee mechanism of ozonolysis	97
77.	Curtius rearrangement	98
78.	Dakin oxidation	99
79.	Dakin–West reaction	100
80.	Danheiser annulation	102
81.	Darzens glycidic ester condensation	103
82.	Davis chiral oxaziridine reagent	104
83.	de Mayo reaction	105
84.	Demjanov rearrangement	107
85.	Dess–Martin periodinane oxidation	109
86.	Dieckmann condensation	110
87.	Diels–Alder reaction	111
88.	Dienone–phenol rearrangement	113

89.	Di- π -methane rearrangement	114
90.	Doebner reaction	115
91.	Doebner–von Miller reaction	117
92.	Doering–LaFlamme allene synthesis	119
93.	Dornow–Wiehler isoxazole synthesis	120
94.	Dötz reaction	122
95.	Dowd ring expansion	123
96.	Dutt–Wormall reaction.....	125
97.	Eglinton reaction	126
98.	Eschenmoser coupling reaction.....	127
99.	Eschenmoser–Tanabe fragmentation	128
100.	Étard reaction	129
101.	Evans aldol reaction	130
102.	Favorskii rearrangement and Quasi-Favorskii rearrangement	132
103.	Feist–Bénary furan synthesis	134
104.	Ferrier rearrangement.....	135
105.	Finkelstein reaction	136
106.	Fischer–Hepp rearrangement	137
107.	Fischer indole synthesis	138
108.	Fischer–Speier esterification	139
109.	Fleming oxidation	140
110.	Forster reaction	142
111.	Frater–Seebach alkylation.....	144
112.	Friedel–Crafts reaction.....	145
113.	Friedländer synthesis.....	147
114.	Fries rearrangement.....	149
115.	Fritsch–Buttenberg–Wiechell rearrangement.....	151
116.	Fujimoto–Belleau reaction	152
117.	Fukuyama amine synthesis	153
118.	Gabriel synthesis	155
119.	Gassman indole synthesis	156
120.	Gattermann–Koch reaction	157
121.	Gewald aminothiophene synthesis	158
122.	Glaser coupling	160
123.	Gomberg–Bachmann reaction.....	161
124.	Gribble indole reduction	162
125.	Gribble reduction of diaryl ketones.....	163
126.	Grignard reaction	164
127.	Grob fragmentation	166
128.	Guareschi–Thorpe condensation	168
129.	Hajos–Wiechert reaction	169
130.	Haller–Bauer reaction	171
131.	Hantzsch pyridine synthesis.....	172
132.	Hantzsch pyrrole synthesis.....	174
133.	Haworth reaction.....	175
134.	Hayashi rearrangement.....	177

XII

135.	Heck reaction	179
136.	Hegedus indole synthesis	181
137.	Hell–Volhard–Zelinsky reaction	182
138.	Henry reaction (nitroaldol reaction)	183
139.	Herz reaction	184
140.	Heteroaryl Heck reaction	186
141.	Hiyama cross-coupling reaction	187
142.	Hoch–Campbell aziridine synthesis	189
143.	Hodges–Vedejs metallation of oxazoles	191
144.	Hofmann rearrangement (Hofmann degradation reaction)	192
145.	Hofmann–Löffler–Freitag reaction	193
146.	Hofmann–Martius reaction (Reilly–Hickinbottom rearrangement)	194
147.	Hooker oxidation	196
148.	Horner–Wadsworth–Emmons reaction	198
149.	Houben–Hoesch synthesis	200
150.	Hunsdiecker reaction	202
151.	Ing–Manske procedure	203
152.	Jacobsen–Katsuki epoxidation	204
153.	Jacobsen rearrangement	206
154.	Japp–Klingemann hydrazone synthesis	208
155.	Julia–Lythgoe olefination	209
156.	Kahne glycosidation	211
157.	Keck stereoselective allylation	213
158.	Keck macrolactonization	215
159.	Kemp elimination	217
160.	Kennedy oxidative cyclization	218
161.	Kharasch addition reaction	219
162.	Knöevenagel condensation	220
163.	Knorr pyrrole synthesis	222
164.	Koch carbonylation reaction (Koch–Haaf carbonylation reaction)	223
165.	Koenig–Knorr glycosidation	225
166.	Kolbe electrolytic coupling	226
167.	Kolbe–Schmitt reaction	227
168.	Kostanecki reaction	228
169.	Krapcho decarboxylation	230
170.	Kröhnke reaction (pyridine synthesis)	231
171.	Kumada cross-coupling reaction	233
172.	Larock indole synthesis	235
173.	Lawesson’s reagent	236
174.	Leuckart–Wallach reaction	237
175.	Lieben haloform reaction	238
176.	Liebeskind–Srogl coupling	239
177.	Lossen rearrangement	240
178.	Luche reduction	241
179.	McFadyen–Stevens reduction	242
180.	McLafferty rearrangement	243

181.	McMurry coupling	244
182.	Madelung indole synthesis	245
183.	Mannich reaction	246
184.	Marshall boronate fragmentation	248
185.	Martin's sulfurane dehydrating reagent	249
186.	Masamune–Roush conditions	251
187.	Meerwein arylation	253
188.	Meerwein–Ponndorf–Verley reduction	254
189.	Meinwald rearrangement	255
190.	Meisenheimer complex	256
191.	Meisenheimer rearrangement	258
192.	Meyer–Schuster rearrangement	259
193.	Michael addition	260
194.	Michaelis–Arbuzov phosphonate synthesis	261
195.	Midland reduction	262
196.	Miller–Loudon–Snyder nitrile synthesis	263
197.	Mislow–Evans rearrangement	264
198.	Mitsunobu reaction	265
199.	Miyaura boration reaction	266
200.	Moffatt oxidation	267
201.	Morgan–Walls reaction (Pictet–Hubert reaction)	269
202.	Mori–Ban indole synthesis	270
203.	Morin rearrangement	272
204.	Mukaiyama aldol reaction	274
205.	Mukaiyama esterification	275
206.	Myers–Saito cyclization	277
207.	Nametkin rearrangement (retropinacol rearrangement)	279
208.	Nazarov cyclization	280
209.	Neber rearrangement	281
210.	Nef reaction	282
211.	Negishi cross-coupling reaction	283
212.	Nenitzescu indole synthesis	284
213.	Nicholas reaction	286
214.	Noyori asymmetric hydrogenation	287
215.	Nozaki–Hiyama–Kishi reaction	289
216.	Oppenauer oxidation	290
217.	Orton rearrangement	292
218.	Overman rearrangement	293
219.	Paal–Knorr furan synthesis	294
220.	Paal–Knorr pyrrole synthesis	295
221.	Parham cyclization	296
222.	Passerini reaction	298
223.	Paterno–Büchi reaction	299
224.	Pauson–Khand cyclopentenone synthesis	300
225.	Payne rearrangement	302
226.	Pechmann condensation (coumarin synthesis)	303

XIV

227.	Pechmann pyrazole synthesis.....	304
228.	Perkin reaction (cinnamic acid synthesis).....	305
229.	Perkow vinyl phosphate synthesis	307
230.	Peterson olefination.....	308
231.	Pfau–Plattner azulene synthesis	310
232.	Pfitzinger quinoline synthesis	311
233.	Pictet–Gams isoquinoline synthesis.....	312
234.	Pictet–Spengler tetrahydroisoquinoline synthesis.....	314
235.	Pinacol rearrangement.....	315
236.	Pinner synthesis	316
237.	Polonovski reaction.....	317
238.	Polonovski–Potier rearrangement	319
239.	Pomeranz–Fritsch reaction.....	320
240.	Prévost <i>trans</i> -dihydroxylation.....	322
241.	Prilezhaev reaction.....	323
242.	Prins reaction	324
243.	Pschorr ring closure	325
244.	Pummerer rearrangement.....	327
245.	Ramberg–Bäcklund olefin synthesis.....	328
246.	Reformatsky reaction	329
247.	Regitz diazo synthesis.....	330
248.	Reimer–Tiemann reaction.....	332
249.	Reissert reaction (aldehyde synthesis)	334
250.	Riley oxidation (selenium dioxide oxidation).....	336
251.	Ring-closing metathesis (RCM) using Grubbs and Schrock catalysts ..	337
252.	Ritter reaction.....	339
253.	Robinson annulation	340
254.	Robinson–Schöpf reaction	341
255.	Rosenmund reduction	343
256.	Roush allylboronate reagent.....	344
257.	Rubottom oxidation.....	345
258.	Rupe rearrangement	346
259.	Rychnovsky polyol synthesis.....	347
260.	Sakurai allylation reaction (Hosomi–Sakurai reaction)	349
261.	Sandmeyer reaction.....	350
262.	Sarett oxidation	351
263.	Schiemann reaction (Balz–Schiemann reaction)	354
264.	Schlosser modification of the Wittig reaction.....	355
265.	Schmidt reaction	356
266.	Schmidt’s trichloroacetimidate glycosidation reaction	357
267.	Scholl reaction	359
268.	Schöpf reaction	361
269.	Schotten–Baumann reaction.....	362
270.	Shapiro reaction	363
271.	Sharpless asymmetric amino hydroxylation	364
272.	Sharpless asymmetric epoxidation	366

273.	Sharpless dihydroxylation.....	369
274.	Shi asymmetric epoxidation.....	372
275.	Simmons–Smith reaction	374
276.	Simonini reaction	375
277.	Simonis chromone cyclization	376
278.	Skraup quinoline synthesis.....	378
279.	Smiles rearrangement.....	380
280.	Sommelet reaction.....	381
281.	Sommelet–Hauser (ammonium ylide) rearrangement.....	383
282.	Sonogashira reaction	384
283.	Staudinger reaction.....	386
284.	Stetter reaction (Michael–Stetter reaction)	387
285.	Stevens rearrangement	389
286.	Stieglitz rearrangement	390
287.	Still–Gennari phosphonate reaction	392
288.	Stille coupling	393
289.	Stille–Kelly reaction.....	394
290.	Stobbe condensation.....	396
291.	Stollé synthesis.....	397
292.	Stork enamine reaction.....	398
293.	Strecker amino acid synthesis	399
294.	Suzuki coupling.....	400
295.	Swern oxidation	402
296.	Tamao–Kumada oxidation	404
297.	Tebbe olefination (Petasis alkenylation)	405
298.	Thorpe–Ziegler reaction.....	407
299.	Tiemann rearrangement	408
300.	Tiffeneau–Demjanov rearrangement.....	409
301.	Tishchenko reaction	411
302.	Tollens reaction.....	412
303.	Tsuji–Trost allylation.....	414
304.	Ueno–Stork cyclization.....	415
305.	Ugi reaction.....	416
306.	Ullmann reaction.....	418
307.	Vilsmeier–Haack reaction.....	419
308.	von Braun reaction	421
309.	von Richter reaction	422
310.	Wacker oxidation	424
311.	Wagner–Meerwein rearrangement.....	426
312.	Wallach rearrangement	427
313.	Weinreb amide	428
314.	Weiss reaction.....	429
315.	Wenker aziridine synthesis	431
316.	Wharton oxygen transposition reaction.....	432
317.	Willgerodt–Kindler reaction	433
318.	Williamson ether synthesis	437

XVI

319.	Wittig reaction	438
320.	[1,2]-Wittig rearrangement	439
321.	[2,3]-Wittig rearrangement	440
322.	Wohl–Ziegler reaction	441
323.	Wolff rearrangement	443
324.	Wolff–Kishner reduction	444
325.	Woodward <i>cis</i> -dihydroxylation.....	445
326.	Wurtz reaction.....	446
327.	Yamada coupling reagent.....	447
328.	Yamaguchi esterification	448
329.	Zaitsev elimination.....	450
330.	Zincke reaction.....	451
331.	Zinin benzidine rearrangement (semidine rearrangement).....	453
	Subject Index.....	455
