

Table of Contents

Foreword	V
Preface	VII
1. Introduction	1
1.1 Motivation	1
1.1.1 Importance of Visual Perception	1
1.1.2 Performance of the Human Visual System	2
1.1.3 Limitations of Current Computer Vision Systems	6
1.1.4 Iterative Interpretation – Local Interactions in a Hierarchy	9
1.2 Organization of the Thesis	11
1.3 Contributions	12

Part I. Theory

2. Neurobiological Background	17
2.1 Visual Pathways	17
2.2 Feature Maps	22
2.3 Layers	23
2.4 Neurons	26
2.5 Synapses	28
2.6 Discussion	30
2.7 Conclusions	33
3. Related Work	35
3.1 Hierarchical Image Models	35
3.1.1 Generic Signal Decompositions	35
3.1.2 Neural Networks	41
3.1.3 Generative Statistical Models	46
3.2 Recurrent Models	50
3.2.1 Models with Lateral Interactions	51
3.2.2 Models with Vertical Feedback	56
3.2.3 Models with Lateral and Vertical Feedback	60
3.3 Conclusions	63

4. Neural Abstraction Pyramid Architecture	65
4.1 Overview	65
4.1.1 Hierarchical Network Structure	65
4.1.2 Distributed Representations	67
4.1.3 Local Recurrent Connectivity	69
4.1.4 Iterative Refinement	70
4.2 Formal Description	71
4.2.1 Simple Processing Elements	71
4.2.2 Shared Weights	73
4.2.3 Discrete-Time Computation	75
4.2.4 Various Transfer Functions	76
4.3 Example Networks	79
4.3.1 Local Contrast Normalization	79
4.3.2 Binarization of Handwriting	82
4.3.3 Activity-Driven Update	89
4.3.4 Invariant Feature Extraction	91
4.4 Conclusions	94
5. Unsupervised Learning	95
5.1 Introduction	95
5.2 Learning a Hierarchy of Sparse Features	99
5.2.1 Network Architecture	100
5.2.2 Initialization	101
5.2.3 Hebbian Weight Update	102
5.2.4 Competition	103
5.3 Learning Hierarchical Digit Features	104
5.4 Digit Classification	108
5.5 Discussion	109
6. Supervised Learning	111
6.1 Introduction	111
6.1.1 Nearest Neighbor Classifier	111
6.1.2 Decision Trees	112
6.1.3 Bayesian Classifier	112
6.1.4 Support Vector Machines	113
6.1.5 Bias/Variance Dilemma	113
6.2 Feed-Forward Neural Networks	114
6.2.1 Error Backpropagation	114
6.2.2 Improvements to Backpropagation	116
6.2.3 Regularization	119
6.3 Recurrent Neural Networks	120
6.3.1 Backpropagation through Time	120
6.3.2 Real-Time Recurrent Learning	122
6.3.3 Difficulty of Learning Long-Term Dependencies	122
6.3.4 Random Recurrent Networks with Fading Memories	124
6.3.5 Robust Gradient Descent	125
6.4 Conclusions	126

Part II. Applications

7. Recognition of Meter Values	129
7.1 Introduction to Meter Value Recognition	129
7.2 Swedish Post Database	130
7.3 Preprocessing	131
7.3.1 Filtering	131
7.3.2 Normalization	134
7.4 Block Classification	136
7.4.1 Network Architecture and Training	137
7.4.2 Experimental Results	138
7.5 Digit Recognition	140
7.5.1 Digit Preprocessing	140
7.5.2 Digit Classification	143
7.5.3 Combination with Block Recognition	144
7.6 Conclusions	146
8. Binarization of Matrix Codes	149
8.1 Introduction to Two-Dimensional Codes	149
8.2 Canada Post Database	150
8.3 Adaptive Threshold Binarization	151
8.4 Image Degradation	153
8.5 Learning Binarization	154
8.6 Experimental Results	156
8.7 Conclusions	164
9. Learning Iterative Image Reconstruction	167
9.1 Introduction to Image Reconstruction	167
9.2 Super-resolution	168
9.2.1 NIST Digits Dataset	169
9.2.2 Architecture for Super-resolution	170
9.2.3 Experimental Results	171
9.3 Filling-in Occlusions	174
9.3.1 MNIST Dataset	175
9.3.2 Architecture for Filling-in of Occlusions	176
9.3.3 Experimental Results	177
9.4 Noise Removal and Contrast Enhancement	179
9.4.1 Image Degradation	180
9.4.2 Experimental Results	181
9.5 Reconstruction from a Sequence of Degraded Digits	183
9.5.1 Image Degradation	184
9.5.2 Experimental Results	185
9.6 Conclusions	189

- 10. Face Localization** 191
 - 10.1 Introduction to Face Localization 191
 - 10.2 Face Database and Preprocessing 193
 - 10.3 Network Architecture 195
 - 10.4 Experimental Results 196
 - 10.5 Conclusions 202

- 11. Summary and Conclusions** 203
 - 11.1 Short Summary of Contributions 203
 - 11.2 Conclusions 204
 - 11.3 Future Work 205
 - 11.3.1 Implementation Options 205
 - 11.3.2 Using More Complex Processing Elements 206
 - 11.3.3 Integration into Complete Systems 207

- References** 209

- Index** 221
