

Table of Contents

Part I. Background

1. Introduction	5
1.1 Motivation	5
1.2 Outline	7
1.3 Conventions	9
2. Description Logics	11
2.1 Terminological Knowledge	12
2.1.1 Syntax	12
2.1.2 Semantics	14
2.1.3 Subsumption	15
2.2 Assertional Knowledge	17
2.3 CLASSIC	18
3. Composite Objects	21
3.1 Composite Objects in Different Areas	22
3.1.1 Mereology	22
3.1.2 Cognitive Science and Linguistics	23
3.1.3 Databases	25
3.1.4 Early Approaches in Knowledge Representation	26
3.1.5 Summary	27
3.2 A Basis for Part-Of Representation	28
3.2.1 Mereological Assumptions	28
3.2.2 Scope of the Framework	29
4. Part-Of in Description Logics	31
4.1 General Frameworks	31
4.1.1 A Framework for Physical Whole-Part Relations	31
4.1.2 A Framework with Specialized Role Constructors and Quantifiers	32
4.1.3 A Framework for Part-Of in Engineering Applications	33

4.2	Specific Issues	34
4.2.1	Composition Constructor	34
4.2.2	Transitivity Aspects	35
4.2.3	Part-Of in an Object-Based Framework	36
4.3	Summary	37

Part II. Theory

5.	A Framework for Part-Of Reasoning in Description Logics	41
5.1	Introduction	41
5.2	Terminological Knowledge	42
5.2.1	Syntax	43
5.2.2	Semantics	45
5.2.3	Subsumption	46
5.3	Assertional Knowledge	47
5.4	Part-Of Hierarchy for Individuals	50
5.5	Implemented Functionality	51
5.6	Summary	53
6.	Extending the Framework	55
6.1	Introduction	55
6.2	Extended Language	56
6.2.1	Terminological Knowledge	56
6.2.2	Assertional Knowledge	65
6.3	Compositional Inclusion for Individuals	68
6.3.1	Modules and Compositional Inclusion	68
6.3.2	Modules and Compositional Inclusion for Individuals	72
6.4	Compositional Inclusion for Concepts	73
6.5	Composes	76
6.6	Assembly	81
6.6.1	Compositional Assembly	83
6.6.2	Compositional Extension	83
6.6.3	Algorithm	85
6.6.4	Preference Relation for Compositional Extension	87
6.7	Completion	92
6.7.1	Completion	92
6.7.2	Algorithm	93
6.7.3	Preference Relation for Completion	95
6.8	Summary	97

7. Comparison of the Framework with Other Approaches . . .	99
7.1 Model for Part-Of	99
7.2 Part-Of in the Description Logic	99
7.3 Subsumption Relationships	100
7.4 Specialized Inferences	101
7.5 Part-Of Hierarchy for Individuals	101
7.6 Compositional Inclusion Hierarchy for Concepts	101

Part III. Application Areas

8. Domain Modeling in an Agent-Oriented Application	107
8.1 Motivation	107
8.2 dMARS	109
8.3 Reaction Control System	110
8.4 Modeling the Belief Knowledge Base	111
8.5 Advantages and Disadvantages	115
8.5.1 Advantages	115
8.5.2 Disadvantages	118
8.6 Conclusion	119
9. Document Management	121
9.1 Motivation	121
9.2 Modeling the Document Management Domain	122
9.3 Useful Queries and Inferences	126
9.3.1 Top-Down Instantiation of Documents	126
9.3.2 Bottom-Up Instantiation of Documents	127
9.3.3 Inheritance via Part-Of	127
9.3.4 Recognition of Individuals	128
9.3.5 Retrieval	129
9.4 Summary	129
10. Learning Composite Concepts	131
10.1 Motivation	131
10.2 Framework	131
10.3 Learning Task	132
10.4 Useful Operations	133
10.4.1 Least Common Subsumer	133
10.4.2 Specific Concepts	136
10.5 Learning Composite Concepts	139
10.5.1 Learning by Using Concepts and Subsumption	139
10.5.2 Learning by Using Individuals	140
10.5.3 Learning by Using Concepts and Part-Of	140
10.6 Summary	141

Part IV. Application

11. Document Search Using Content, Structure and Properties 145

- 11.1 Model 147
 - 11.1.1 Query Language 147
 - 11.1.2 Document Bases 151
- 11.2 Architecture 151
 - 11.2.1 Knowledge Bases 152
 - 11.2.2 Information Extractor 153
 - 11.2.3 Kernel 153
 - 11.2.4 User Interface 155
- 11.3 Prototype Implementation and Test Results 155
- 11.4 Related Work 163
- 11.5 Conclusion 164

Part V. Conclusion

12. Conclusion 169

- 12.1 Contributions 169
- 12.2 Future Work 171

References 177

Part VI. Appendices

A. New User Functions 189

B. Query Language 193

C. Symbols 195
