Foreword — By Douglas Hofstadter	IX
Preface	XV

Part I. Turing’s Life and Thoughts

Alan Turing: an Introductory Biography	3
<i>Andrew Hodges</i>	
References	8
Alan’s Apple: Hacking the Turing Test	9
<i>Valeria Patera</i>	
1 The Author’s View	9
2 Turing and the Apple — By Giulio Giorello	10
3 The Play	12
References	40
What Would Alan Turing Have Done After 1954?	43
<i>Andrew Hodges</i>	
1 A Survey of Turing’s Legacy in 1954	43
2 Church’s Thesis and Copeland’s Thesis	47
3 Computability and Quantum Physics	53
References	56
From Turing to the Information Society	59
<i>Daniela Cerqui</i>	
1 The So-called “Information Society”	59
2 An Anthropological Analysis	60
3 First Tendency: the Disappearing Body?	61
4 Second Tendency: Reproducing Every Bodily Element	65
5 Information as the Lowest Common Denominator	66
6 Turing, Wiener and Cybernetics	67
7 Intelligence, Rationality and Humankind	68
8 From Unorganized to Organized Machines	69

9 Towards a New Human Being?	71
References	73

Part II. Computation and Turing Machines

The Mechanization of Mathematics	77
---	----

Michael J. Beeson

1 Introduction	77
2 Before Turing	82
3 Hilbert and the Entscheidungsproblem	84
4 Turing's Negative Solution of the Entscheidungsproblem	88
5 Church and Gödel	90
6 The Possible Loopholes	91
7 The First Theorem-Provers	92
8 Kinds of Mathematical Reasoning	95
9 Computer Algebra	100
10 Decision Procedures in Algebra and Geometry	103
11 Equality Reasoning	110
12 Proofs Involving Computations	114
13 Searching for Proofs	117
14 Proofs Involving Sets, Functions, and Numbers	122
15 Conclusion	124
References	127

Hypercomputational Models	135
--	-----

Mike Stannett

1 Introduction	135
2 A Taxonomy of Hypercomputation	138
3 Hypercomputer Engineering	149
4 Hypercomputational Characteristics	150
5 Conclusion and Summary	152
References	152

Turing's Ideas and Models of Computation	159
---	-----

Eugene Eberbach, Dina Goldin, Peter Wegner

1 Introduction: Algorithmic Computation	159
2 Turing's Contributions to Computer Science	160
3 Super-Turing Computation	170
4 Models of Super-Turing Computation	179
5 Towards a New Kind of Computer Science	185
6 Rethinking the Theory of Computation	188
7 Conclusions	191
References	192

The Myth of Hypercomputation	195
<i>Martin Davis</i>	
1 The Impossible as a Challenge	195
2 Algorithms and Infinity	196
3 Turing Machines, the Church-Turing Thesis, and Modern Computers	199
4 Hava Siegelmann Ventures “Beyond the Turing Limit”	200
5 Turing’s O-Machines	204
6 Computing with Randomness and Quantum Computation	208
7 Mechanism	208
8 Algorithms: Universality vs. Complexity	208
References	210
Quantum Computers: the Church-Turing Hypothesis Versus the Turing Principle	213
<i>Christopher G. Timpson</i>	
1 The Advent of Quantum Computers	213
2 From Bits to Qubits	215
3 The Turing Principle Versus the Church-Turing Hypothesis	217
4 The Computational Analogy	227
5 Deutsch and the Nature of Mathematics	232
6 Conclusion	238
References	238
Implementation of a Self-replicating Universal Turing Machine	241
<i>Hector Fabio Restrepo, Gianluca Tempesti, Daniel Mange</i>	
1 Introduction	241
2 Turing Machines	242
3 Self-replication of a Universal Turing Machine on a Multicellular Array	245
4 PICOPASCAL	253
5 Detailed Implementation of a Universal Turing Machine	259
6 Conclusion	265
References	267
Cognitive Science and the Turing Machine: an Ecological Perspective	271
<i>Andrew J. Wells</i>	
1 Introduction	271
2 Turing’s Analysis of Computation	273
3 The Implications of Turing’s Analysis for Cognitive Science	278
4 Broadening the Scope of Turing’s Analysis	288
References	291

Part III. Artificial Intelligence and the Turing Test

Can Machines Think?	295
<i>Daniel C. Dennett</i>	
1 Can Machines Think?	295
2 Postscript [1985]: Eyes, Ears, Hands, and History	310
3 Postscript [1997]	314
References	316
The Computer, Artificial Intelligence, and the Turing Test	317
<i>B. Jack Copeland, Diane Proudfoot</i>	
1 Turing and the Computer	317
2 Artificial Intelligence	328
3 Artificial Life	335
4 The Turing Test	336
5 Postscript	345
References	346
A Note on Enjoying Strawberries with Cream, Making Mistakes, and Other Idiotic Features	353
<i>Helmut Schnelle</i>	
1 Human Thought Capacity	353
2 Some Details on “Sub-computationality”	355
3 Some Details on “Con-computationality”	356
References	357
Robots and Rule-Following	359
<i>Diane Proudfoot</i>	
1 Turing and Wittgenstein	359
2 Rule-Following	362
3 The Argument from Manufacturing History	370
References	377
The Law of Accelerating Returns	381
<i>Ray Kurzweil</i>	
1 The Intuitive Linear View Versus the Historical Exponential View .	381
2 The Law of Accelerating Returns	383
3 The Singularity Is Near	385
4 Wherefrom Moore’s Law	387
5 Moore’s Law Was Not the First, but the Fifth Paradigm to Provide for Exponential Growth of Computing	388
6 DNA Sequencing, Memory, Communications, the Internet, and Miniaturization	391
7 The Law of Accelerating Returns Applied to the Growth of Computation	391

8	The Software of Intelligence	395
9	Reverse Engineering the Human Brain	397
10	Scanning from Inside	398
11	How to Use Your Brain Scan	398
12	Downloading the Human Brain	399
13	Is the Human Brain Different from a Computer?	401
14	Objective and Subjective	401
15	The Importance of Having a Body	402
16	So Just Who Are These People?	403
17	A Thought Experiment	404
18	On Tubules and Quantum Computing	406
19	A Clear and Future Danger	408
20	Living Forever	412
21	The Next Step in Evolution and the Purpose of Life	413
22	Why Intelligence Is More Powerful than Physics	415

Part IV. The Enigma

The Polish Brains Behind the Breaking of the Enigma Code Before and During the Second World War 419

Elisabeth Rakus-Andersson

1	Introduction	419
2	The Cryptology Course in Poznań	420
3	The Enigma	421
4	The International Cooperation	423
5	The Breaking of the Enigma System	424
6	The New Devices as a Reaction to Changes in the Enigma Settings	426
7	French and British Efforts at Breaking Enigma	427
8	The Bombe as a Response to Further Changes in the Enigma System	428
9	The Gift to the Allies	429
10	The Mathematical Solution of Enigma	430
11	Epilogue	435
	References	438

Alan Turing at Bletchley Park in World War II 441

Tony Sale

1	Alan Turing and the Enigma Machine	441
2	“Cribs” and Opened Out Enigmas	444
3	The “E” Rack	451
4	Adding the Diagonal Board to the Bombe	453
5	Alan Turing and the German Navy’s Use of Enigma	454
6	Alan Turing after German Naval Enigma	460
7	An Appreciation of Alan Turing at Bletchley Park	460

A Appendix II of UK Public Record Office Document HW14/2 461

Part V. Almost Forgotten Ideas

Watching the Daisies Grow: Turing and Fibonacci Phyllotaxis 477
Jonathan Swinton

1 Introduction: Turing’s Last, Lost Work 477
 2 Fibonacci Phyllotaxis 478
 3 Where Do Spots Come from? The Turing Instability 481
 4 Lattice Generation 484
 5 Geometrical Phyllotaxis 485
 6 Dynamic Phyllotaxis 487
 7 Routes to Phyllotaxis 489
 8 Turing and Modern Approaches to Fibonacci Phyllotaxis 493
 9 Conclusion 495
 10 Acknowledgments 496
 References 496

Turing’s Connectionism 499
Christof Teuscher

1 Introduction 499
 2 Connectionism and Artificial Neural Networks 501
 3 Turing’s Unorganized Machines 506
 4 Organizing Unorganized Machines 519
 5 Conclusion 523
 References 525
