

Contents

1. Introduction	1
2. Schrödinger Theory from the Perspective of ‘Classical’ Fields Derived from Quantal Sources	7
2.1 Time-Dependent Schrödinger Theory	7
2.2 Definitions of Quantal Sources	8
2.2.1 Electron Density $\rho(\mathbf{r}t)$	9
2.2.2 Spinless Single-Particle Density Matrix $\gamma(\mathbf{r}\mathbf{r}'t)$	9
2.2.3 Pair-Correlation Density $g(\mathbf{r}\mathbf{r}'t)$, and Fermi-Coulomb Hole $\rho_{xc}(\mathbf{r}\mathbf{r}'t)$	10
2.2.4 Current Density $\mathbf{j}(\mathbf{r}t)$	11
2.3 Definitions of ‘Classical’ Fields	12
2.3.1 Electron-Interaction Field $\mathcal{E}_{ee}(\mathbf{r}t)$	12
2.3.2 Differential Density Field $\mathcal{D}(\mathbf{r}t)$	12
2.3.3 Kinetic Field $\mathcal{Z}(\mathbf{r}t)$	13
2.3.4 Current Density Field $\mathcal{J}(\mathbf{r}t)$	13
2.4 Energy Components in Terms of Quantal Sources and Fields .	14
2.4.1 Electron-Interaction Potential Energy $E_{ee}(t)$	14
2.4.2 Kinetic Energy $T(t)$	15
2.4.3 External Potential Energy $E_{\text{ext}}(t)$	16
2.5 Pure State Differential and Integral Virial Theorems	16
2.6 The Quantum-Mechanical ‘Hydrodynamical’ Equations	18
2.7 The Internal Field of the Electrons and Ehrenfest’s Theorem .	19
2.8 The Harmonic Potential Theorem	23
2.9 Time-Independent Schrödinger Theory: Ground and Bound Excited States	24
2.9.1 Coalescence Conditions	26
2.9.2 Asymptotic Structure of Wavefunction and Density ...	27
2.10 Examples of the Field Perspective: The Ground and First Excited Singlet State of the Hooke’s Atom	30
2.10.1 Wavefunction, Orbital Function, and Density	31
2.10.2 Fermi-Coulomb Hole Charge Distribution $\rho_{xc}(\mathbf{r}\mathbf{r}')$...	34

2.10.3	Hartree, Pauli–Coulomb, and Electron–Interaction Fields $\mathcal{E}_H(\mathbf{r})$, $\mathcal{E}_{xc}(\mathbf{r})$, $\mathcal{E}_{ee}(\mathbf{r})$ and Energies E_H, E_{xc}, E_{ee}	36
2.10.4	Kinetic Field $\mathcal{Z}(\mathbf{r})$ and Kinetic Energy T	39
2.10.5	Differential Density Field $\mathcal{D}(\mathbf{r})$	40
2.10.6	Total Energy E and Ionization Potential I	42
2.10.7	Expectations of Other Single–Particle Operators	42
2.11	Schrödinger Theory and Quantum Fluid Dynamics	43
2.11.1	Single–Electron Case	43
2.11.2	Many–Electron Case	45
3.	Quantal Density Functional Theory	49
3.1	Time-Dependent Quantal Density Functional Theory	50
3.1.1	Quantal Sources	51
3.1.2	Fields	54
3.1.3	Total Energy and Components in Terms of Quantal Sources and Fields	57
3.1.4	Effective Field $\mathcal{F}^{\text{eff}}(\mathbf{r}t)$ and Electron–Interaction Potential Energy $v_{ee}(\mathbf{r}t)$	60
3.2	Sum Rules	63
3.2.1	Integral Virial Theorem	63
3.2.2	Ehrenfest’s Theorem	63
3.2.3	Torque Sum Rule	64
3.3	Time-Independent Quantal Density Functional Theory	65
3.3.1	Quantal Sources	66
3.3.2	Fields	67
3.3.3	Total Energy and Components	67
3.3.4	Effective Field $\mathcal{F}^{\text{eff}}(\mathbf{r})$ and Electron–Interaction Potential Energy $v_{ee}(\mathbf{r})$	68
3.3.5	Sum Rules	69
3.3.6	Highest Occupied Eigenvalue ϵ_m	70
3.3.7	Endnote	70
3.4	Application of Q–DFT to the Ground and First Excited Singlet State of the Hooke’s Atom	71
3.4.1	S System Wavefunction, Spin–Orbitals, and Density ..	71
3.4.2	Pair–Correlation Density; Fermi and Coulomb Hole Charge Distributions	72
3.4.3	Hartree, Pauli, and Coulomb Fields $\mathcal{E}_H(\mathbf{r})$, $\mathcal{E}_x(\mathbf{r})$, $\mathcal{E}_c(\mathbf{r})$ and Energies E_H, E_x, E_c	77
3.4.4	Hartree $W_H(\mathbf{r})$, Pauli $W_x(\mathbf{r})$, and Coulomb $W_c(\mathbf{r})$ Potential Energies	79
3.4.5	Correlation–Kinetic Field $\mathcal{Z}_{tc}(\mathbf{r})$, Energy T_c , and Potential Energy $W_{tc}(\mathbf{r})$	81
3.4.6	Total Energy and Ionization Potential	85

3.5	Quantal Density Functional Theory of Hartree–Fock and Hartree Theories	86
3.5.1	Hartree–Fock Theory	87
3.5.2	The Slater–Bardeen Interpretation of Hartree–Fock Theory	89
3.5.3	Theorems in Hartree–Fock Theory	90
3.5.4	Q–DFT of Hartree–Fock Theory	91
3.5.5	Hartree Theory	94
3.5.6	Q–DFT of Hartree Theory	96
4.	The Hohenberg–Kohn Theorems and Kohn–Sham Density Functional Theory	99
4.1	The Hohenberg–Kohn Theorems	100
4.1.1	Inverse Maps and Constrained Search	105
4.2	Kohn–Sham Density Functional Theory	107
4.3	Time-Dependent Density Functional Theory	111
4.4	Corollary to the Hohenberg–Kohn Theorem	114
4.4.1	Time-Independent Case	115
4.4.2	Time-Dependent Case	120
4.4.3	Endnote	122
5.	Physical Interpretation of Kohn–Sham Density Functional Theory	125
5.1	Interpretation of the Kohn–Sham Electron–Interaction Energy Functional $E_{ee}^{KS}[\rho]$ and Its Derivative $v_{ee}(\mathbf{r})$	126
5.2	Adiabatic Coupling Constant Scheme	130
5.2.1	Q–DFT Within Adiabatic Coupling Constant Framework	131
5.2.2	KS–DFT Within Adiabatic Coupling Constant Framework	133
5.2.3	Q–DFT and KS–DFT in Terms of the Adiabatic Coupling Constant Perturbation Expansion	135
5.3	Interpretation of the Kohn–Sham ‘Exchange’ Energy Functional $E_x^{KS}[\rho]$ and Its Derivative $v_x(\mathbf{r})$	137
5.4	Interpretation of the Kohn–Sham ‘Correlation’ Energy Functional $E_c^{KS}[\rho]$ and Its Derivative $v_c(\mathbf{r})$	138
5.5	Interpretation of the KS–DFT of Hartree–Fock Theory	139
5.6	Interpretation of the KS–DFT of Hartree Theory	140
5.7	The Optimized Potential Method	141
5.7.1	The Exchange–Only Optimized Potential Method	142
5.8	Physical Interpretation of the Optimized Potential Method	146
5.8.1	Interpretation of ‘Exchange–Only’ OPM	147

6. Quantal Density Functional Theory of the Density Amplitude	153
6.1 Density Functional Theory of the B System	154
6.1.1 DFT Definitions of the Pauli Kinetic and Potential Energies	157
6.2 Derivation of the Differential Equation for the Density Amplitude from the Schrödinger Equation ...	158
6.3 Quantal Density Functional Theory of the B System	161
6.3.1 Q–DFT Definitions of the Pauli Kinetic and Potential Energy	164
6.4 Endnote	166
7. Quantal Density Functional Theory of the Discontinuity in the Electron–Interaction Potential Energy	167
7.1 Origin of the Discontinuity of the Electron–Interaction Potential Energy	168
7.2 Expression for Discontinuity Δ in Terms of S System Eigenvalues	171
7.3 Correlations Contributing to the Discontinuity According to Kohn–Sham Theory	174
7.4 Quantal Density Functional Theory of the Discontinuity	175
7.4.1 Correlations Contributing to the Discontinuity According to Q–DFT: Analytical Proof	177
7.4.2 Numerical Examples	180
7.5 Endnote	186
8. Further Insights Derived Via Quantal Density Functional Theory	187
8.1 The Local Density Approximation in Kohn–Sham Theory ...	189
8.1.1 Derivation and Interpretation of Electron Correlations Via Kohn–Sham Theory	189
8.1.2 Derivation and Interpretation of Electron Correlations Via Quantal Density Functional Theory	192
8.1.3 Structure of the Fermi Hole in the Local Density Approximation	198
8.1.4 Endnote	203
8.2 Slater Theory	205
8.2.1 Derivation of the Exact ‘Slater Potential’	205
8.2.2 Why the ‘Slater Exchange Potential’ Does Not Represent the Potential Energy of an Electron	208
8.2.3 Correctly Accounting for the Dynamic Nature of the Fermi Hole	210
8.2.4 The Local Density Approximation in Slater Theory ...	212

9. Epilogue	215
9.1 Asymptotic Structure of the Electron–Interaction Potential Energy in the Classically Forbidden Region of Atoms and Metal Surfaces	216
9.1.1 Asymptotic Structure in Atoms	216
9.1.2 Asymptotic Structure at Metal Surfaces	217
Appendices	221
A. Proof of the Pure State Differential Virial Theorem	221
B. Proof of the Harmonic Potential Theorem	225
C. Analytical Expressions for the Properties of the Ground and First Excited Singlet States of the Hooke’s Atom	227
C.1 Ground State ($k = 1/4$)	227
C.2 First Excited Singlet State ($k = 0.144498$; $\omega = \sqrt{k} = 0.381029$)	232
D. Derivation of the Kinetic–Energy–Density Tensor for Hooke’s Atom in Its Ground State	236
E. Proof of the S System Differential Virial Theorem	238
F. Derivation of the Pair–Correlation Density in the Local Density Approximation for Exchange	240
