

Contents

Preface	vii
Contents.....	xi

Chapter 1. Introduction to machine dynamics

1.1	Basic concepts and definitions.....	1
1.2	Dynamic models of drivers.....	3
1.3	Dynamic models of mechanical systems	13
1.4	Operating characteristics. Resistance forces	18
1.5	Motion control systems.....	21

Chapter 2. Dynamics of single driver machines with rigid components

2.1	Kinetic energy of machine and generalised forces.....	29
2.2	Equations of machine motion. Motion regimes	33
2.3	Steady state motion dynamics.....	36
2.4	Methods to reduce internal vibration in machine.....	45
2.5	Transient processes	49
2.6	Vibration of a machine on a flexible foundation	55

Chapter 3. Dynamics of machines with flexible transmission mechanism

3.1	Elastic and dissipative characteristics of transmission mechanism.....	63
3.2	Equations of motion for machine with a flexible transmission mechanism	69
3.3	Steady state motion.....	70
3.4	Transient processes	76

Chapter 4 Dynamics of machines with multi-mass chained mechanical system

4.1	Degrees of freedom for dynamic models. Generalised coordinates.....	83
4.2	Equations of motion for chained system.....	85
4.3	Transfer functions and frequency characteristics of chained system	88
4.4	Steady state motion of machine with chained mechanical system.....	97
4.5	Transient processes in machine with chained mechanical system	103

Chapter 5. Dynamics of machines with program control system

5.1	Program control of machine motion and feedback	107
5.2	Structure of control systems with feedback	110
5.3	Stabilisation of velocity in machine with rigid components	125
5.4	Efficiency and stability in a closed-loop automatic control system	136
5.5	Stabilisation of velocity in machine with flexible transmission mechanism	144

Chapter 6. Dynamics of resonant machines

6.1	Excitation and tuning of resonant machines	153
6.2	Generalised models of a vibration machine	161
6.3	Vibration machines with forced excitation	164
6.4	Vibration machines with single degree of freedom under forced excitation. Resonant machines	166
6.5	Vibration machines with kinematic excitation	172
6.6	Dynamic characteristics of vibration systems	175
6.7	Operating loads. Nonlinear effects in resonant machines	182
6.8	Methods for the tuning of resonant machines	196
6.9	Autoresonant excitation of vibration machines	203

Chapter 7. Dynamics of hand-held percussion machines

7.1	Percussion machine as a pulse modulator	207
7.2	Excitation of percussion machine as a problem of optimal control	211
7.3	Quasi-optimal excitations with condensed acceleration impulses	216
7.4	Dynamics of rotary-percussion machines	219
Bibliography		225
Subject Index		229
