Contents

1 Introduction 1

2 Introduction to Quantum Mechanics 5
2.1 Line, Band and Continuous Spectra
Bohr's Atomic Theory 6
2.2 Wave-Particle Dualism and Wave Mechanics 11
2.2.1 Rigid Rotors 13
2.2.2 Harmonic Oscillator 16
2.2.3 Anharmonic Oscillator 20
2.3 Exercise 23

3 Introduction to Statistical Mechanics 25
3.1 Bose, Boltzmann and Fermi Statistics 28
3.2 Thermodynamic Properties 33
3.2.1 Contribution of Translational Energy 36
3.2.2 Contribution of Rotational
and Vibrational Energy Forms 38
3.2.3 Contribution of Electronic Energy 49
3.2.4 Sample Calculations 50
3.3 Distribution of Energy Levels 52
3.4 Exercise 57

4 Radiative Properties
of High Temperature Gases 59
4.1 Basic Concepts and Laws 59
4.2 Gas Radiation and Equation of Energy Transfer 68
4.3 Radiative Characteristics for Ionized Gases 84
4.4 Evaluation of Radiation 94
4.5 Exercise 101

5 Collision Processes for High Temperature Gases 103
5.1 Dynamics of Binary Collision 103
5.2 Collision Cross-Section 108
5.2.1 Collision Between Neutrals 108

5.2.2 Collision Between Electrons and Neutrals 114
5.2.3 Ion-Neutral Collision 117
5.2.4 Charged Particle Collision 119
5.3 Collision Frequency, Mean Free Path 122
5.4 Reaction Rates and Vibrational and Temperature Nonequilibrium 125
5.5 Exercise 134

6 Equilibrium Composition of a Reacting Gas Mixture 135
6.1 Vant' Hoff Model of Chemical Reaction 136
6.2 Heat of Reaction 139
6.3 Properties of Mixture of Gases 141
6.4 Equilibrium Composition of an Ideal Dissociating Diatomic Gas 142
6.5 Equilibrium Composition for a Multiple Component Gas 147
6.6 Equilibrium Composition for a Pure Monatomic Gas Plasma 152
6.7 Equilibrium Composition of a Multiple Temperature Gas Plasma 158
6.8 Temperature Derivatives of Equilibrium Gas Mixtures 162
6.9 Effect of Radiation 165
6.10 Exercise 166

7 Transport Properties of High Temperature Gases 167
7.1 Motion of a Singly-Charged Particle in Electromagnetic Fields 167
7.2 Collision-Dominated Ionized Gas 172
7.3 Diffusion, Ambi-polar Diffusion and Mobility 177
7.4 Viscosity, Heat Conductivity and Electrical Conductivity 183
7.5 Diffusion and Radiative Heat Conduction 188
7.6 Effect of Magnetic Field on the Transport Properties of Ionized Gases 191
7.7 Transport Properties of an Ideal Dissociating Gas 194
7.8 Exercise 196

8 Boundary Effects for High Temperature Gases 197
8.1 Emission of Electrons and Ions 197
8.2 One-Dimensional Sheath Effects 204
8.3 Heat Transfer 212

9 Production of High Temperature Gases 217
9.1 Thermodynamic Charts for Air Plasma 219
9.2 Isentropic Flow in a Nozzle 220

9.3 Gas State After a Shock . . . 223
9.4 Vibrational Relaxation Effects in Gas Dynamics . . . 226
9.5 Electrical Breakdown in Gases . . . 230
9.6 High Frequency Discharges . . . 239

10 Diagnostic Techniques . . . 241
10.1 Temperature Measurement-Probe Method . . . 243
10.2 Temperature Measurement-Spectroscopical Methods . . . 247
10.3 Temperature Measurement-Interferometric Methods . . . 254
10.4 Velocity Measurement by Laser-Doppler Velocimeter . . . 256
10.5 Exercise . . . 257

11 High Temperature Gas Dynamics . . . 259
11.1 Basic Equations . . . 259
11.2 Magneto- and Electromagneto-gas-dynamic Approximations . 273
11.3 Wave Propagation . . . 278

12 Some Practical Examples . . . 283
12.1 Magneto-gas-dynamic Waves and Shocks . . . 283
12.2 Arc Plasma Flow in a Tube . . . 288
12.3 Impinging Plasma Jet . . . 295
12.4 Particle-Plasma Interaction . . . 297
12.4.1 Drag and Heat Transfer . . . 299
12.4.2 Internal Conduction . . . 305
12.4.3 Low Pressure Effects . . . 305
12.4.4 Particle Charging Effect . . . 305
12.4.5 Fluctuating Velocity and Temperature . . . 306
12.5 A Transverse Blown Arc . . . 307
12.6 Magneto-gas-dynamic Flow Inside Ducts . . . 311
12.7 MGD Power Generation or Gas Acceleration . . . 314
12.8 Plasma Manufacturing and Processing . . . 320
12.9 Weakly Ionized Plasma . . . 323
12.10 Exercise . . . 323

A Statistical Weights and Energy (cm^{-1}) for Selected Atoms and Molecules . . . 325

B Enthalpy (MJ/kmol) for Different Gases (1MJ = 1 Mega Joule) . . . 337

C Entropy (MJ/kmol) for Different Gases (1MJ = 1 Mega Joule) . . . 339

References . . . 341

List of Symbols . . . 347

Index . . . 355
