<b>Contributors</b>	<b>13</b>
<b>Preface</b>	<b>15</b>
<b>I Finance</b>	<b>19</b>
<b>1 Stable Distributions</b>	<b>21</b>
<i>Szymon Borak, Wolfgang Härdle, and Rafał Weron</i>	
1.1 Introduction . . . . .	21
1.2 Definitions and Basic Characteristic . . . . .	22
1.2.1 Characteristic Function Representation . . . . .	24
1.2.2 Stable Density and Distribution Functions . . . . .	26
1.3 Simulation of $\alpha$ -stable Variables . . . . .	28
1.4 Estimation of Parameters . . . . .	30
1.4.1 Tail Exponent Estimation . . . . .	31
1.4.2 Quantile Estimation . . . . .	33
1.4.3 Characteristic Function Approaches . . . . .	34
1.4.4 Maximum Likelihood Method . . . . .	35
1.5 Financial Applications of Stable Laws . . . . .	36

<b>2 Extreme Value Analysis and Copulas</b>	<b>45</b>
<i>Krzysztof Jajuga and Daniel Papla</i>	
2.1 Introduction . . . . .	45
2.1.1 Analysis of Distribution of the Extremum . . . . .	46
2.1.2 Analysis of Conditional Excess Distribution . . . . .	47
2.1.3 Examples . . . . .	48
2.2 Multivariate Time Series . . . . .	53
2.2.1 Copula Approach . . . . .	53
2.2.2 Examples . . . . .	56
2.2.3 Multivariate Extreme Value Approach . . . . .	57
2.2.4 Examples . . . . .	60
2.2.5 Copula Analysis for Multivariate Time Series . . . . .	61
2.2.6 Examples . . . . .	62
<b>3 Tail Dependence</b>	<b>65</b>
<i>Rafael Schmidt</i>	
3.1 Introduction . . . . .	65
3.2 What is Tail Dependence? . . . . .	66
3.3 Calculation of the Tail-dependence Coefficient . . . . .	69
3.3.1 Archimedean Copulae . . . . .	69
3.3.2 Elliptically-contoured Distributions . . . . .	70
3.3.3 Other Copulae . . . . .	74
3.4 Estimating the Tail-dependence Coefficient . . . . .	75
3.5 Comparison of TDC Estimators . . . . .	78
3.6 Tail Dependence of Asset and FX Returns . . . . .	81
3.7 Value at Risk – a Simulation Study . . . . .	84

<b>4 Pricing of Catastrophe Bonds</b>	<b>93</b>
<i>Krzysztof Burnecki, Grzegorz Kukla, and David Taylor</i>	
4.1 Introduction . . . . .	93
4.1.1 The Emergence of CAT Bonds . . . . .	94
4.1.2 Insurance Securitization . . . . .	96
4.1.3 CAT Bond Pricing Methodology . . . . .	97
4.2 Compound Doubly Stochastic Poisson Pricing Model . . . . .	99
4.3 Calibration of the Pricing Model . . . . .	100
4.4 Dynamics of the CAT Bond Price . . . . .	104
<b>5 Common Functional IV Analysis</b>	<b>115</b>
<i>Michał Benko and Wolfgang Härdle</i>	
5.1 Introduction . . . . .	115
5.2 Implied Volatility Surface . . . . .	116
5.3 Functional Data Analysis . . . . .	118
5.4 Functional Principal Components . . . . .	121
5.4.1 Basis Expansion . . . . .	123
5.5 Smoothed Principal Components Analysis . . . . .	125
5.5.1 Basis Expansion . . . . .	126
5.6 Common Principal Components Model . . . . .	127
<b>6 Implied Trinomial Trees</b>	<b>135</b>
<i>Pavel Čížek and Karel Komorád</i>	
6.1 Option Pricing . . . . .	136
6.2 Trees and Implied Trees . . . . .	138
6.3 Implied Trinomial Trees . . . . .	140
6.3.1 Basic Insight . . . . .	140

6.3.2	State Space . . . . .	142
6.3.3	Transition Probabilities . . . . .	144
6.3.4	Possible Pitfalls . . . . .	145
6.4	Examples . . . . .	147
6.4.1	Pre-specified Implied Volatility . . . . .	147
6.4.2	German Stock Index . . . . .	152

**7 Heston's Model and the Smile** **161***Rafał Weron and Uwe Wystup*

7.1	Introduction . . . . .	161
7.2	Heston's Model . . . . .	163
7.3	Option Pricing . . . . .	166
7.3.1	Greeks . . . . .	168
7.4	Calibration . . . . .	169
7.4.1	Qualitative Effects of Changing Parameters . . . . .	171
7.4.2	Calibration Results . . . . .	173

**8 FFT-based Option Pricing** **183***Szymon Borak, Kai Detlefsen, and Wolfgang Härdle*

8.1	Introduction . . . . .	183
8.2	Modern Pricing Models . . . . .	183
8.2.1	Merton Model . . . . .	184
8.2.2	Heston Model . . . . .	185
8.2.3	Bates Model . . . . .	187
8.3	Option Pricing with FFT . . . . .	188
8.4	Applications . . . . .	192

<b>9 Valuation of Mortgage Backed Securities</b>	<b>201</b>
<i>Nicolas Gaussel and Julien Tamine</i>	
9.1 Introduction . . . . .	201
9.2 Optimally Prepaid Mortgage . . . . .	204
9.2.1 Financial Characteristics and Cash Flow Analysis . . .	204
9.2.2 Optimal Behavior and Price . . . . .	204
9.3 Valuation of Mortgage Backed Securities . . . . .	212
9.3.1 Generic Framework . . . . .	213
9.3.2 A Parametric Specification of the Prepayment Rate . .	215
9.3.3 Sensitivity Analysis . . . . .	218
<b>10 Predicting Bankruptcy with Support Vector Machines</b>	<b>225</b>
<i>Wolfgang Härdle, Rouslan Moro, and Dorothea Schäfer</i>	
10.1 Bankruptcy Analysis Methodology . . . . .	226
10.2 Importance of Risk Classification in Practice . . . . .	230
10.3 Lagrangian Formulation of the SVM . . . . .	233
10.4 Description of Data . . . . .	236
10.5 Computational Results . . . . .	237
10.6 Conclusions . . . . .	243
<b>11 Modelling Indonesian Money Demand</b>	<b>249</b>
<i>Noer Azam Achsani, Oliver Holtemöller, and Hizir Sofyan</i>	
11.1 Specification of Money Demand Functions . . . . .	250
11.2 The Econometric Approach to Money Demand . . . . .	253
11.2.1 Econometric Estimation of Money Demand Functions .	253
11.2.2 Econometric Modelling of Indonesian Money Demand .	254
11.3 The Fuzzy Approach to Money Demand . . . . .	260

11.3.1 Fuzzy Clustering . . . . .	260
11.3.2 The Takagi-Sugeno Approach . . . . .	261
11.3.3 Model Identification . . . . .	262
11.3.4 Fuzzy Modelling of Indonesian Money Demand . . . . .	263
11.4 Conclusions . . . . .	266
<b>12 Nonparametric Productivity Analysis</b>	<b>271</b>
<i>Wolfgang Härdle and Seok-Oh Jeong</i>	
12.1 The Basic Concepts . . . . .	272
12.2 Nonparametric Hull Methods . . . . .	276
12.2.1 Data Envelopment Analysis . . . . .	277
12.2.2 Free Disposal Hull . . . . .	278
12.3 DEA in Practice: Insurance Agencies . . . . .	279
12.4 FDH in Practice: Manufacturing Industry . . . . .	281
<b>II Insurance</b>	<b>287</b>
<b>13 Loss Distributions</b>	<b>289</b>
<i>Krzysztof Burnecki, Adam Misiorek, and Rafal Weron</i>	
13.1 Introduction . . . . .	289
13.2 Empirical Distribution Function . . . . .	290
13.3 Analytical Methods . . . . .	292
13.3.1 Log-normal Distribution . . . . .	292
13.3.2 Exponential Distribution . . . . .	293
13.3.3 Pareto Distribution . . . . .	295
13.3.4 Burr Distribution . . . . .	298
13.3.5 Weibull Distribution . . . . .	298

13.3.6 Gamma Distribution . . . . .	300
13.3.7 Mixture of Exponential Distributions . . . . .	302
13.4 Statistical Validation Techniques . . . . .	303
13.4.1 Mean Excess Function . . . . .	303
13.4.2 Tests Based on the Empirical Distribution Function . .	305
13.4.3 Limited Expected Value Function . . . . .	309
13.5 Applications . . . . .	311
<b>14 Modeling of the Risk Process</b>	<b>319</b>
<i>Krzysztof Burnecki and Rafał Weron</i>	
14.1 Introduction . . . . .	319
14.2 Claim Arrival Processes . . . . .	321
14.2.1 Homogeneous Poisson Process . . . . .	321
14.2.2 Non-homogeneous Poisson Process . . . . .	323
14.2.3 Mixed Poisson Process . . . . .	326
14.2.4 Cox Process . . . . .	327
14.2.5 Renewal Process . . . . .	328
14.3 Simulation of Risk Processes . . . . .	329
14.3.1 Catastrophic Losses . . . . .	329
14.3.2 Danish Fire Losses . . . . .	334
<b>15 Ruin Probabilities in Finite and Infinite Time</b>	<b>341</b>
<i>Krzysztof Burnecki, Paweł Miśta, and Aleksander Weron</i>	
15.1 Introduction . . . . .	341
15.1.1 Light- and Heavy-tailed Distributions . . . . .	343
15.2 Exact Ruin Probabilities in Infinite Time . . . . .	346
15.2.1 No Initial Capital . . . . .	347

15.2.2 Exponential Claim Amounts . . . . .	347
15.2.3 Gamma Claim Amounts . . . . .	347
15.2.4 Mixture of Two Exponentials Claim Amounts . . . . .	349
15.3 Approximations of the Ruin Probability in Infinite Time . . . . .	350
15.3.1 Cramér–Lundberg Approximation . . . . .	351
15.3.2 Exponential Approximation . . . . .	352
15.3.3 Lundberg Approximation . . . . .	352
15.3.4 Beekman–Bowers Approximation . . . . .	353
15.3.5 Renyi Approximation . . . . .	354
15.3.6 De Vylder Approximation . . . . .	355
15.3.7 4-moment Gamma De Vylder Approximation . . . . .	356
15.3.8 Heavy Traffic Approximation . . . . .	358
15.3.9 Light Traffic Approximation . . . . .	359
15.3.10 Heavy-light Traffic Approximation . . . . .	360
15.3.11 Subexponential Approximation . . . . .	360
15.3.12 Computer Approximation via the Pollaczek–Khinchin Formula . . . . .	361
15.3.13 Summary of the Approximations . . . . .	362
15.4 Numerical Comparison of the Infinite Time Approximations . . . . .	363
15.5 Exact Ruin Probabilities in Finite Time . . . . .	367
15.5.1 Exponential Claim Amounts . . . . .	368
15.6 Approximations of the Ruin Probability in Finite Time . . . . .	368
15.6.1 Monte Carlo Method . . . . .	369
15.6.2 Seegerdahl Normal Approximation . . . . .	369
15.6.3 Diffusion Approximation . . . . .	371
15.6.4 Corrected Diffusion Approximation . . . . .	372
15.6.5 Finite Time De Vylder Approximation . . . . .	373

15.6.6	Summary of the Approximations . . . . .	374
15.7	Numerical Comparison of the Finite Time Approximations . . . . .	374
<b>16</b>	<b>Stable Diffusion Approximation of the Risk Process</b>	<b>381</b>
<i>Hansjörg Furrer, Zbigniew Michna, and Aleksander Weron</i>		
16.1	Introduction . . . . .	381
16.2	Brownian Motion and the Risk Model for Small Claims . . . . .	382
16.2.1	Weak Convergence of Risk Processes to Brownian Motion	383
16.2.2	Ruin Probability for the Limit Process . . . . .	383
16.2.3	Examples . . . . .	384
16.3	Stable Lévy Motion and the Risk Model for Large Claims . . . . .	386
16.3.1	Weak Convergence of Risk Processes to $\alpha$ -stable Lévy Motion . . . . .	387
16.3.2	Ruin Probability in Limit Risk Model for Large Claims	388
16.3.3	Examples . . . . .	390
<b>17</b>	<b>Risk Model of Good and Bad Periods</b>	<b>395</b>
<i>Zbigniew Michna</i>		
17.1	Introduction . . . . .	395
17.2	Fractional Brownian Motion and Model of Good and Bad Periods	396
17.3	Ruin Probability in Limit Risk Model of Good and Bad Periods	399
17.4	Examples . . . . .	402
<b>18</b>	<b>Premiums in the Individual and Collective Risk Models</b>	<b>407</b>
<i>Jan Iwanik and Joanna Nowicka-Zagrajek</i>		
18.1	Premium Calculation Principles . . . . .	408
18.2	Individual Risk Model . . . . .	410
18.2.1	General Premium Formulae . . . . .	411

18.2.2 Premiums in the Case of the Normal Approximation . . . . .	412
18.2.3 Examples . . . . .	413
18.3 Collective Risk Model . . . . .	416
18.3.1 General Premium Formulae . . . . .	417
18.3.2 Premiums in the Case of the Normal and Translated Gamma Approximations . . . . .	418
18.3.3 Compound Poisson Distribution . . . . .	420
18.3.4 Compound Negative Binomial Distribution . . . . .	421
18.3.5 Examples . . . . .	423
<b>19 Pure Risk Premiums under Deductibles</b>	<b>427</b>
<i>Krzysztof Burnecki, Joanna Nowicka-Zagrajek, and Agnieszka Wyłomańska</i>	
19.1 Introduction . . . . .	427
19.2 General Formulae for Premiums Under Deductibles . . . . .	428
19.2.1 Franchise Deductible . . . . .	429
19.2.2 Fixed Amount Deductible . . . . .	431
19.2.3 Proportional Deductible . . . . .	432
19.2.4 Limited Proportional Deductible . . . . .	432
19.2.5 Disappearing Deductible . . . . .	434
19.3 Premiums Under Deductibles for Given Loss Distributions . . . . .	436
19.3.1 Log-normal Loss Distribution . . . . .	437
19.3.2 Pareto Loss Distribution . . . . .	438
19.3.3 Burr Loss Distribution . . . . .	441
19.3.4 Weibull Loss Distribution . . . . .	445
19.3.5 Gamma Loss Distribution . . . . .	447
19.3.6 Mixture of Two Exponentials Loss Distribution . . . . .	449
19.4 Final Remarks . . . . .	450

<b>20 Premiums, Investments, and Reinsurance</b>	<b>453</b>
<i>Paweł Miśta and Wojciech Otto</i>	
20.1 Introduction . . . . .	453
20.2 Single-Period Criterion and the Rate of Return on Capital . . . . .	456
20.2.1 Risk Based Capital Concept . . . . .	456
20.2.2 How To Choose Parameter Values? . . . . .	457
20.3 The Top-down Approach to Individual Risks Pricing . . . . .	459
20.3.1 Approximations of Quantiles . . . . .	459
20.3.2 Marginal Cost Basis for Individual Risk Pricing . . . . .	460
20.3.3 Balancing Problem . . . . .	461
20.3.4 A Solution for the Balancing Problem . . . . .	462
20.3.5 Applications . . . . .	462
20.4 Rate of Return and Reinsurance Under the Short Term Criterion	463
20.4.1 General Considerations . . . . .	464
20.4.2 Illustrative Example . . . . .	465
20.4.3 Interpretation of Numerical Calculations in Example 2 .	467
20.5 Ruin Probability Criterion when the Initial Capital is Given . .	469
20.5.1 Approximation Based on Lundberg Inequality . . . . .	469
20.5.2 “Zero” Approximation . . . . .	471
20.5.3 Cramér–Lundberg Approximation . . . . .	471
20.5.4 Beekman–Bowers Approximation . . . . .	472
20.5.5 Diffusion Approximation . . . . .	473
20.5.6 De Vylder Approximation . . . . .	474
20.5.7 Subexponential Approximation . . . . .	475
20.5.8 Panjer Approximation . . . . .	475
20.6 Ruin Probability Criterion and the Rate of Return . . . . .	477
20.6.1 Fixed Dividends . . . . .	477

20.6.2 Flexible Dividends . . . . .	479
20.7 Ruin Probability, Rate of Return and Reinsurance . . . . .	481
20.7.1 Fixed Dividends . . . . .	481
20.7.2 Interpretation of Solutions Obtained in Example 5 . . .	482
20.7.3 Flexible Dividends . . . . .	484
20.7.4 Interpretation of Solutions Obtained in Example 6 . . .	485
20.8 Final remarks . . . . .	487
 <b>III General</b>	 <b>489</b>
 <b>21 Working with the XQC</b>	 <b>491</b>
<i>Szymon Borak, Wolfgang Härdle, and Heiko Lehmann</i>	
21.1 Introduction . . . . .	491
21.2 The XploRe Quantlet Client . . . . .	492
21.2.1 Configuration . . . . .	492
21.2.2 Getting Connected . . . . .	493
21.3 Desktop . . . . .	494
21.3.1 XploRe Quantlet Editor . . . . .	495
21.3.2 Data Editor . . . . .	496
21.3.3 Method Tree . . . . .	501
21.3.4 Graphical Output . . . . .	503
 <b>Index</b>	 <b>507</b>
