

Contents

Invited Talks

- Approximations of independent sets in graphs 1
Magnús M. Halldórsson
- Using linear programming in the design and analysis of approximation algorithms: Two illustrative problems 15
David B. Shmoys
- The steiner tree problem and its generalizations 33
Vijay V. Vazirani

Contributed Talks

- Approximation schemes for covering and scheduling on related machines 39
Yossi Azar and Leah Epstein
- One for the price of two: A unified approach for approximating covering problems 49
Reuven Bar-Yehuda
- Approximation of geometric dispersion problems 63
Christoph Baur and Sándor P. Fekete
- Approximating k -outconnected subgraph problems 77
Joseph Cheriyan, Tibor Jordán and Zeev Nutov
- Lower bounds for on-line scheduling with precedence constraints on identical machines 89
Leah Epstein
- Instant recognition of half integrality and 2-approximations 99
Dorit S. Hochbaum
- The t - vertex cover problem: Extending the half integrality framework with budget constraints 111
Dorit S. Hochbaum

VIII Table of Contents

A new fully polynomial approximation scheme for the knapsack problem <i>Hans Kellerer and Ulrich Pferschy</i>	123
On the hardness of approximating spanners <i>Guy Kortsarz</i>	135
Approximating circular arc colouring and bandwidth allocation in all-optical ring networks <i>Vijay Kumar</i>	147
Approximating maximum independent set in k -clique-free graphs <i>Ingo Schiermeyer</i>	159
Approximating an interval scheduling problem <i>Frits C.R. Spieksma</i>	169
Finding dense subgraphs with semidefinite programming <i>Anand Srivastav and Katja Wolf</i>	181
Best possible approximation algorithm for MAX SAT with cardinality constraint <i>Maxim I. Sviridenko</i>	193
Author Index	201
