

Table of Contents

Notation.....	XIII
---------------	------

Part I. Setting the Stage

1. Introduction	3
1.1 Evolutionary Algorithms	3
1.2 Overview of Related Work	9
1.3 Issues and Goals	15
1.4 Outline	17
2. Background	19
2.1 No Free Lunch	19
2.2 A Boolean Satisfiability Problem Generator	21
2.3 Using SAT to Create Multimodal and Epistatic Problems....	24
2.4 Speciation	28
2.5 Summary	34

Part II. Static Theoretical Analyses

3. A Survival Schema Theory for Recombination	39
3.1 Introduction	39
3.2 Framework	40
3.3 Survival Theory for n -point Recombination	42
3.4 Graphing Disruption	45
3.5 Estimates Using Population Homogeneity	47
3.6 Survival Theory for P_0 Uniform Recombination	51
3.7 Expected Number of Offspring in H_k	56
3.8 Summary	58
4. A Construction Schema Theory for Recombination	59
4.1 Introduction	59
4.2 Construction Theory for n -point Recombination	60
4.3 Graphing Construction	62

4.4	Construction Theory for P_0 Uniform Recombination	64
4.5	Expected Number of Offspring in H_k	72
4.6	Summary	74
5.	Survival and Construction Schema Theory for Recombination	77
5.1	Introduction	77
5.2	Survival and Construction	77
5.3	Expected Number of Offspring in H_k	81
5.4	Summary	82
6.	A Survival Schema Theory for Mutation	83
6.1	Introduction	83
6.2	Framework	84
6.3	Summary	90
7.	A Construction Schema Theory for Mutation	91
7.1	Introduction	91
7.2	Framework	91
7.3	Summary	99
8.	Schema Theory: Mutation versus Recombination	101
8.1	Introduction	101
8.2	Survival	101
8.3	Construction	104
8.4	Survival and Construction	113
8.5	Summary	114
9.	Other Static Characterizations of Mutation and Recombination	117
9.1	Introduction	117
9.2	Exploratory Power	118
9.3	Positional Bias	121
9.4	Distributional Bias	122
9.5	Summary	125
<hr/>		
Part III. Dynamic Theoretical Analyses		
<hr/>		
10.	Dynamic Analyses of Mutation and Recombination	129
10.1	Introduction	129
10.2	The Limiting Distribution for Recombination	129
10.3	The Limiting Distribution for Mutation	137
10.4	The Limiting Distribution for Mutation and Recombination	144
10.5	Summary	145

11. A Dynamic Model of Selection and Mutation	147
11.1 Introduction	147
11.2 Selection and Mutation	147
11.3 Summary	151
12. A Dynamic Model of Selection, Recombination, and Mutation	155
12.1 Introduction	155
12.2 EA Performance	155
12.3 Overview of Markov Chains	156
12.4 The Nix and Vose Markov Chain Model for EAs	159
12.5 Instantaneous Transient Behavior of EAs	161
12.6 Summary and Discussion	167
13. An Aggregation Algorithm for Markov Chains	169
13.1 Introduction	169
13.2 The Aggregation Algorithm at a High Level	170
13.3 The Aggregation Algorithm in More Detail	171
13.4 Special Cases in Which Aggregation Is Perfect	176
13.5 Error Analysis and a Similarity Metric	181
13.6 Some Experiments	183
13.7 Related Work	187
13.8 Summary	189
<hr/>	
Part IV. Empirical Analyses	
<hr/>	
14. Empirical Validation	193
14.1 Introduction	193
14.2 The Multimodal Problem Generator	194
14.3 The Relationship of Multimodality to Epistasis	198
14.4 Summary	201
<hr/>	
Part V. Summary	
<hr/>	
15. Summary and Discussion	205
15.1 Summary and Contributions	205
15.2 Future Work	208
15.3 Conclusions	209
Appendix: Formal Computations for Aggregation	211
References	213
Index	219
