
Contents

1	Transport in Freight Carrier Networks	1
1.1	Recent Trends in Freight Transportation	1
1.2	Carrier Transport Networks.....	4
1.3	Network Design, Configuration and Deployment	9
1.4	Distribution and Collection Planning	11
1.5	Aims of this Book and Used Methods	13
2	Operational Freight Transport Planning	15
2.1	Decision Problems	16
2.1.1	Request Acceptance	16
2.1.2	Mode Selection.....	17
2.1.3	Routing	19
2.1.4	Freight Optimization	20
2.2	Hierarchical and Simultaneous Planning	22
2.2.1	Hierarchical Approach	22
2.2.2	Simultaneous Routing and Freight Optimization.....	23
2.3	Generic Models for Simultaneous Problems	24
2.3.1	Maximal-Profit Selection	25
2.3.2	Bottleneck Selection	25
2.3.3	Selection with Compulsory Requests	26
2.3.4	Selection with Postponement	27
2.4	Conclusions.....	29
3	Pickup and Delivery Selection Problems	31
3.1	Problems with Pickup and Delivery Requests	31
3.1.1	Problems with Depot-Connected Requests	33
3.1.2	Problems with Direct Delivery Requests.....	33
3.1.3	Simultaneous Problems	34
3.2	Pickup and Delivery Paths and Schedules.....	34
3.3	Optimization Problem	36
3.4	Problem Variants.....	37

3.4.1	The PDSP with LSP Incorporation	38
3.4.2	The Capacitated PDSP	39
3.4.3	The PDSP with Compulsory Requests	39
3.4.4	The PDSP with Postponement	40
3.5	Test Case Generation	42
3.5.1	Generation of Pickup and Delivery Requests	42
3.5.2	Freight Tariff	45
3.5.3	Benchmark Suites	46
3.6	Conclusions	48
4	Memetic Algorithms	49
4.1	Algorithmic Solving of Problems with PD-Requests	49
4.2	Evolutionary Algorithms	52
4.3	Genetic Algorithms	55
4.3.1	Terminus Technici	55
4.3.2	General Framework	56
4.3.3	Applicability of Genetic Search	57
4.3.4	Limits of the Genetic Search	58
4.4	Repairing and Improving the Genetic Code	60
4.5	Conclusions	64
5	Memetic Algorithm Vehicle Routing	65
5.1	Genetic Sequencing	65
5.2	Genetic Clustering	68
5.3	Combined Genetic Sequencing and Clustering	71
5.4	Advanced MA-Approaches: The State-of-the-Art	71
5.4.1	Multi-Chromosome Memetic Algorithms	72
5.4.2	Co-Evolution with Specialization	74
5.4.3	Co-Evolution of Partial Solutions	75
5.5	Conclusions	76
6	Memetic Search for Optimal PD-Schedules	77
6.1	Permutation-Controlled Schedule Construction	78
6.1.1	Construction of Routes for more than one Vehicle	78
6.1.2	Parallel Time-Window-Based Routing	78
6.1.3	Algorithm Steps	79
6.1.4	Determination of the Request Instantiation Order	84
6.2	Representation of a PD-Schedule	84
6.3	Configuration of the Memetic Algorithm	85
6.3.1	Initial Population	85
6.3.2	Recombination	86
6.3.3	Mutation	90
6.3.4	Population Model	92
6.4	Computational Experiments	93
6.4.1	Parameterization of the MA	94

6.4.2	Impacts of Spatial Distribution and Time Window Tightness	97
6.4.3	Identification of Profit-Maximum Request Selections	100
6.4.4	Consideration of Capacity Limitations	102
6.4.5	Identification of Deferrable Requests	109
6.5	Conclusions	113
7	Coping with Compulsory Requests	115
7.1	Limits of Fitness Penalization	116
7.1.1	Static Penalties	116
7.1.2	Dynamically Determined Penalties	118
7.1.3	Adaptive Penalization	119
7.2	A Double-Ranking Approach	120
7.3	Converging-Constraint Approach	121
7.3.1	Alternating and Converging Constraints	121
7.3.2	ACC-Algorithm Control	124
7.4	Assessing QC-MA and ACC-MA: Numerical Results	125
7.4.1	Experimental Setup	125
7.4.2	Numerical Results	125
7.4.3	Impacts of Intermediate Cost Reductions: An Example	130
7.5	Conclusions	133
8	Request Selection and Collaborative Planning	135
8.1	The Portfolio Re-composition Problem	136
8.1.1	Literature Review	136
8.1.2	Formal Problem Statement	137
8.2	Configuration of the Groupage System	139
8.2.1	Bundle Specification by the Carriers	140
8.2.2	Bundle Assignment by the Mediator	140
8.3	Computational Experiments	141
8.3.1	Test Cases	142
8.3.2	Collaborative Planning Approach	142
8.3.3	Reference Approach	143
8.3.4	Results	143
8.4	Conclusions	147
9	Conclusions	149
9.1	Understanding Freight Carrier Decision Problems	149
9.2	Model Building	150
9.3	Methodological Enhancements	151
	References	153
