Introduction	
<i>M. Monastyrsky</i>	1
1 Topology in the Electron Theory of Metals	
<i>A.M. Kosevich</i>	3
1.1 Introduction	3
1.2 Dynamics of Conductivity Electrons and the Fermi Surface	4
1.3 Geometry of the Fermi Surface in Crystal	8
1.4 Quantum Magnetic Oscillations and the Shape of the Fermi Surface	11
1.5 Magnetic Breakdown	16
1.6 Band Electrons in the Electric Field and Bloch Oscillations	17
1.7 Topology of the Fermi Surfaces and Low-Temperature Magnetoresistivity of Metals	19
1.8 Berry's Phase and the Topology of the Electron Trajectories in the Magnetic Field	23
References	28
2 Topology, Quasiperiodic Functions, and the Transport Phenomena	
<i>A.Ya. Maltsev and S.P. Novikov</i>	31
2.1 Introduction	31
2.1.1 Galvanomagnetic Phenomena in Normal Metals: Classical Results, GSMF Limit	31
2.1.2 Modern Ideas: The GSMF Limit, Topology, and Dynamical Systems	36
2.1.3 Transport in 2D Electron Gas and Topology of Quasiperiodic Functions	39
2.2 The Classification of Fermi Surfaces and the "Topological Quantum Numbers"	41

2.3 Quasiperiodic Modulations of 2D Electron Gas and the Generalized Novikov Problem	49
References	58

3 The Role of Topology in Growth and Agglomeration

<i>R. Kerner</i>	61
3.1 Introduction	61
3.2 Topology and Geometry of Polygon Tilings and Networks	62
3.3 Dynamical Model of Polygon Agglomeration in Two Dimensions ...	69
3.4 Application: How the Fullerene Molecules are Formed	74
3.5 Onion Fullerenes and Carbon Tubes	79
3.6 Rigidity and Local Structure in Covalent Glasses	85
References	90

4 Topological Defects in Carbon Nanocrystals

<i>V.A. Osipov</i>	93
4.1 Introduction	93
4.2 Geometry and Topology of Carbon Nanoparticles	94
4.3 Electronic Properties	98
4.3.1 Theory: Basic Assumptions	99
4.4 Spherical Molecules	102
4.4.1 The Model	102
4.4.2 Extended Electron States	104
4.4.3 Numerical Results	105
4.4.4 Zero-Energy Modes	106
4.5 Nanocones	107
4.5.1 The Model	107
4.5.2 Electron States	108
4.5.3 Numerical Results	110
4.6 Hyperboloid Geometry	110
4.6.1 The Model	110
4.6.2 Electron States	111
4.6.3 Numerical Results	113
4.7 Conclusions	114
References	115

5 Physics from Topology and Structures

<i>J. Yi</i>	117
5.1 Introduction	117
5.2 Quantum Hall Effect	118
5.3 Shapiro Steps in Josephson Junctions	122
5.4 Charge Density Waves	126
5.5 Quantum Phases	129
5.6 Carbon Nanotubes	132

5.7 Conclusions	136
References	136
6 Phason Dynamics in Aperiodic Crystals	
<i>T. Janssen</i>	139
6.1 Introduction	139
6.1.1 Quasiperiodic Crystals	139
6.1.2 Examples of Quasiperiodic Crystals	140
6.1.3 Symmetry	141
6.2 Embedding in Superspace	143
6.3 Simple Models for Incommensurate Structures	145
6.3.1 Displacively Modulated Phases	145
6.3.2 The Double-Chain Model for Incommensurate Composites	147
6.3.3 The Ground State of the DCM	147
6.4 Phonons and Phasons	148
6.4.1 Phonons in Aperiodic Crystals	148
6.4.2 Phason Excitations	151
6.4.3 The Phason Content of Phonons	153
6.5 Nonlinear Phason Dynamics	154
6.5.1 Modulated Phases	154
6.5.2 Incommensurate Composites	155
6.6 Sliding on a Quasiperiodic Substrate	160
6.6.1 A Model	160
6.6.2 Nonlinear Dynamics and Friction	162
6.7 Conclusions	162
References	163
7 Hamiltonian Monodromy as Lattice Defect	
<i>B. Zhilinskii</i>	165
7.1 Introduction	165
7.2 Integrable Classical Singular Fibrations and Monodromy	165
7.3 Quantum Monodromy	167
7.4 Elementary Defects of Lattices	168
7.4.1 Vacations and Linear Dislocations	169
7.4.2 Angular Dislocations as Elementary Monodromy Defect	170
7.4.3 About the Sign of the Elementary Monodromy Defect	171
7.4.4 Rational Cuts and Rational Line Defects	172
7.5 Defects with Arbitrary Monodromy	175
7.5.1 Topological Description of Unimodular Matrices	175
7.5.2 Classes of Conjugated Elements and “Normal Form” of $SL(2, Z)$ Matrices	177
7.5.3 Several Elementary Monodromy Defects	177
7.5.4 Several Rational Line Defects	181
7.6 Is There Mutual Interest in Defect – Monodromy Correspondence?	183
References	185

8 Two-Qubit and Three-Qubit Geometry and Hopf Fibrations

<i>R. Mosseri</i>	187
8.1 Introduction	187
8.2 From the S^3 Hypersphere to the Bloch Sphere Representation	188
8.3 Two Qubits, Entanglement, and the S^7 Hopf Fibration	190
8.3.1 The Two-Qubit Hilbert Space	190
8.3.2 The S^7 Hopf Fibration	190
8.3.3 Generalized Bloch Sphere for the Two-Qubit Case	192
8.4 Three Qubits and the S^{15} Hopf Fibration	197
8.4.1 Three Qubits	197
8.4.2 The S^{15} Hopf Fibration	197
8.4.3 Discussion	198
8.5 Conclusions	200
References	203

9 Defects, Surface Anchoring, and Three-Dimensional Director Fields in the Lamellar Structure of Cholesteric Liquid Crystals as Studied by Fluorescence Confocal Polarizing Microscopy

<i>I.I. Smalyukh and O.D. Lavrentovich</i>	205
9.1 Introduction	205
9.2 Experimental Methods and Materials	207
9.2.1 Materials and Cell Preparation	207
9.2.2 Fluorescence Confocal Polarizing Microscopy	208
9.3 Directors and Defects in Cholesteric Liquid Crystals	209
9.4 Elastic and Surface Properties of Cholesterics	210
9.4.1 Elasticity of Cholesteric Liquid Crystals	211
9.4.2 Surface Anchoring Energy	213
9.5 Dislocation–Interface Interaction and Three-Dimensional Director Structures in the Weakly Anchored Cholesterics	216
9.5.1 Anchoring-Mediated Dislocation–Interface Interaction	216
9.5.2 Layers Profiles of Isolated Edge Dislocations	220
9.6 The Equilibrium Defects and Structures in Strongly Anchored Cholesteric Wedges	222
9.6.1 Experimental Observations	223
9.6.2 Far-Field Energy of an Isolated Dislocation	226
9.6.3 Dislocation Core Energy	227
9.6.4 Effect of Confinement on the Dislocation Energy	228
9.6.5 Equilibrium Lattice of Dislocation in a Cholesteric Wedge	228
9.7 Metastable Structures, Oily Streaks, Turns and Nodes of Defects	230
9.7.1 Metastable Structures and Oily Streaks	230
9.7.2 Dislocation Turns	234
9.7.3 Nodes of Line Defects	235
9.8 Dynamics of Defects, Glide and Climb of Dislocations, and Their Kinks	237

9.8.1 Peach and Koehler Force	238
9.8.2 Climb	238
9.8.3 Glide	239
9.8.4 Experimental Observations	240
9.8.5 Peierls–Nabarro Friction	244
9.8.6 Kink Structure Versus Peierls–Nabarro Energy Barrier	246
9.9 Conclusions	247
References	249
