

# Table of Contents

<b>1. Introduction</b> .....	1
1.1 Scope of This Book .....	3
1.2 The Electromagnetic Spectrum .....	4
1.3 Spectral Lines and Energy Levels .....	5
1.4 Units in Optical Spectroscopy .....	8
Further Reading .....	9

---

## Part I. Atomic and Molecular Structure

---

<b>2. Basic Atomic Theory</b> .....	13
2.1 One-Electron Atoms .....	14
2.1.1 Schrödinger's Equation for One-Electron Atoms .....	14
2.1.2 Quantum Numbers and Wave Functions .....	17
2.1.3 The Probability Density .....	19
2.1.4 Electron Spin and Fine Structure .....	22
2.2 Two-Electron Atoms .....	25
2.2.1 Schrödinger's Equation for Two-Electron Atoms .....	25
2.2.2 The Pauli Principle and Antisymmetric Wave Functions .....	26
2.2.3 The Exchange Interaction .....	29
2.2.4 General Energy Level Structure of Two-Electron Systems .....	31
2.3 Many-Electron Atoms .....	32
2.3.1 The Central Field Approximation .....	33
2.3.2 <i>LS</i> Coupling .....	36
2.3.3 Deviation from Pure <i>LS</i> Coupling .....	42
2.3.4 Configuration Interaction .....	44
2.4 Radiative Transitions and Selection Rules .....	45
2.4.1 Time-Dependent Perturbations .....	45
2.4.2 The Electromagnetic Interaction .....	46
2.4.3 The Electric Dipole Approximation .....	48
2.4.4 Selection Rules for Electric Dipole Transitions .....	49
2.4.5 Selection Rules and Multiplets in <i>LS</i> Coupling .....	49
2.4.6 Forbidden Lines and Higher-Order Radiation .....	52
Further Reading .....	52

<b>3. Atomic Structure and Atomic Spectra</b> .....	55
3.1 One-Electron Systems .....	55
3.1.1 The Alkali Metals .....	56
3.1.2 Spectral Series .....	57
3.1.3 Other One-Electron Systems .....	60
3.2 Two-Electron Systems .....	62
3.2.1 Systems with an $s^2$ Ground Configuration .....	62
3.2.2 Systems with a $p^2$ Ground Configuration .....	63
3.2.3 The Rare Gas Systems .....	63
3.3 Complex Atoms .....	64
3.3.1 p-Shell Atoms with Multiple Parent Terms .....	64
3.3.2 The Transition Elements .....	66
3.3.3 Lanthanides and Actinides .....	67
3.4 Interpretation and Understanding of the Observations .....	68
3.5 Inner-Shell Excitation and Autoionization .....	68
3.6 Isoelectronic Sequences and Highly Charged Ions .....	71
3.7 Atomic Structure and the Periodic Table .....	74
3.7.1 Trends Along the Periodic Table .....	74
3.7.2 Regularities Within Periods .....	76
3.7.3 Different Coupling Types .....	76
3.8 Nuclear Effects .....	79
3.8.1 Hyperfine Structure .....	79
3.8.2 Isotope Structure .....	82
3.9 The Influence of External Fields .....	85
3.9.1 The Zeeman Effect .....	85
3.9.2 The Stark Effect .....	89
Further Reading .....	92
<b>4. The Analysis of Atomic Spectra</b> .....	93
4.1 Observations .....	93
4.2 Predictions .....	94
4.2.1 Semiempirical Relations .....	95
4.2.2 <i>Ab initio</i> Theoretical Predictions .....	97
4.2.3 Parametric Predictions .....	99
4.3 Term Analysis in Practice .....	100
4.4 Determination of the Ionization Energy .....	103
4.5 Databases: Spectral Lines and Energy Levels .....	105
Further Reading .....	106
<b>5. A Summary of Molecular Structure</b> .....	109
5.1 The Born–Oppenheimer Approximation .....	109
5.2 Electronic Energy of Diatomic Molecules .....	111
5.2.1 The Hydrogen Molecular Ion, $H_2^+$ .....	112
5.2.2 Symmetry Properties of Molecular Orbitals .....	115
5.2.3 General Structure of Diatomic Molecules .....	115

5.2.4	The Labelling of Electronic States . . . . .	116
5.3	Vibrational Energy of Diatomic Molecules . . . . .	118
5.4	Rotational Energy of Diatomic Molecules . . . . .	121
5.5	Remarks on Polyatomic Molecules . . . . .	123
	Further Reading . . . . .	127
<b>6.</b>	<b>Molecular Spectra: A Brief Introduction . . . . .</b>	<b>129</b>
6.1	Transition Probabilities and Selection Rules for Diatomic Molecules . . . . .	129
6.2	Rotational and Vibrational Spectra of Diatomic Molecules . . .	132
6.2.1	Rotational Spectra . . . . .	132
6.2.2	Vibration–Rotation Spectra . . . . .	134
6.3	Electronic Spectra of Diatomic Molecules . . . . .	136
6.3.1	Hund’s Coupling Cases . . . . .	136
6.3.2	Symmetry Considerations . . . . .	137
6.3.3	Electronic Transitions . . . . .	138
6.3.4	The Franck–Condon Principle . . . . .	143
6.4	Some Further Points on Spectra of Diatomic Molecules . . . . .	145
6.4.1	Satellite Bands . . . . .	145
6.4.2	Missing Rotational Lines and Alternation of Intensities	145
6.4.3	Continuous Spectra . . . . .	147
6.4.4	Predissociation . . . . .	149
6.5	Raman Spectra . . . . .	150
6.6	Remarks on the Spectra of Polyatomic Molecules . . . . .	153
6.6.1	Rotational Spectra . . . . .	153
6.6.2	Vibrational Spectra . . . . .	154
6.6.3	Electronic Spectra . . . . .	155
6.6.4	Spectra of Atmospheric Importance . . . . .	156
	Further Reading . . . . .	158

---

## Part II. Emission and Absorption of Radiation

---

<b>7.</b>	<b>Emission and Absorption of Radiation . . . . .</b>	<b>161</b>
7.1	Definitions of Light Flux . . . . .	161
7.2	Blackbody Radiation . . . . .	164
7.3	The Emission and Absorption of Line Radiation . . . . .	166
7.4	Boltzmann Distribution of Population . . . . .	167
7.5	The Einstein Probability Coefficients . . . . .	167
7.6	Absorption Coefficient . . . . .	170
7.7	Einstein Coefficients and Line Strengths . . . . .	172
7.8	Oscillator Strength . . . . .	175
7.9	The $f$ Sum Rule . . . . .	179
7.10	Magnetic Dipole and Electric Quadrupole Radiation . . . . .	180
7.11	$f$ Values in Diatomic Molecules . . . . .	182
	Further Reading . . . . .	186

<b>8. The Width and Shape of Spectral Lines</b> .....	187
8.1 Line Profiles in Absorption and Emission .....	187
8.2 Natural Broadening .....	189
8.3 Doppler Broadening .....	191
8.4 Pressure Broadening .....	194
8.4.1 Types of Perturbation .....	195
8.4.2 The Impact Approximation .....	198
8.4.3 The Weisskopf Radius .....	199
8.4.4 The Quasistatic Approximation .....	201
8.4.5 Orders of Magnitude .....	204
8.4.6 Pressure Broadening in Molecular Spectra .....	205
8.4.7 Some Limitations of the Approximations .....	206
8.5 Convolution of Line Profiles: The Voigt Profile .....	207
Further Reading .....	208
<b>9. Radiative Transfer and Population Distributions</b> .....	209
9.1 Optical Depth and Equivalent Width .....	209
9.2 Curve of Growth .....	211
9.3 Emission Lines: Source Function and Radiative Transfer .....	214
9.4 Thermodynamic Equilibrium and Collisional Transition Rates .....	217
9.4.1 Collisional Transition Rates .....	218
9.4.2 Local Thermodynamic Equilibrium .....	220
9.4.3 Coronal Equilibrium .....	222
9.5 Energy Distributions and Partition Functions .....	223
9.5.1 The Boltzmann Distribution .....	223
9.5.2 The Maxwell Distribution .....	224
9.6 Dissociation and Ionization Equilibrium .....	225
9.6.1 Saha's Equation for Ionization Equilibrium .....	226
9.6.2 Conditions for Ionization Equilibrium .....	228
Further Reading .....	229
<b>10. Elementary Plasma Spectroscopy</b> .....	231
10.1 Composition of Plasmas .....	231
10.2 Debye Radius .....	232
10.3 Plasma Oscillations .....	235
10.4 Thermodynamic Equilibrium in Transient Plasmas .....	239
10.5 Depression of Ionization Potential and the Inglis-Teller Limit .....	240
10.6 Continuous Emission and Absorption .....	241
10.7 The Continuous Absorption Cross-Section .....	244
10.8 The Continuous Emission .....	247
10.9 Other Continua .....	249
10.10 Applications of Plasma Spectroscopy .....	250
10.11 Spectroscopic Measurement of Temperature .....	250

10.11.1 Gas Kinetic Temperature .....	251
10.11.2 Population or Excitation Temperature .....	251
10.11.3 Ionization Temperature .....	252
10.11.4 Reversal Temperature .....	253
10.11.5 Optically Thick Limit .....	253
10.11.6 Intensity of Continuous Radiation .....	253
Further Reading .....	254

---

### Part III. Experimental Methods

---

<b>11. Introduction to Experimental Methods .....</b>	<b>257</b>
11.1 Dispersion and Resolving Power .....	258
11.2 Throughput and Illumination .....	262
11.3 Wavelength and Intensity Measurements .....	265
Further Reading .....	266
<b>12. Dispersive Spectrometers: Prisms and Gratings .....</b>	<b>267</b>
12.1 Slit Width .....	268
12.2 Prism Instruments .....	270
12.2.1 Types of Prism Instrument .....	270
12.2.2 Deviation and Dispersion .....	271
12.2.3 Resolving Power .....	274
12.2.4 Prism Materials .....	275
12.2.5 Image Defects .....	276
12.2.6 Merits of Prism Spectrometers .....	277
12.3 Grating Instruments .....	277
12.3.1 Basic Properties of Diffraction Gratings .....	277
12.3.2 Condition for Maxima .....	278
12.3.3 Intensity Distribution from Ideal Diffraction Grating ..	279
12.3.4 Dispersion and Resolving Power .....	283
12.3.5 Concave Gratings .....	286
12.4 Mountings for Diffraction Grating Spectrometers .....	290
12.4.1 Mountings for Plane Gratings .....	290
12.4.2 Mountings for Concave Gratings .....	292
12.4.3 Image Defects .....	295
12.5 Production and Characteristics of Gratings .....	295
12.6 Gratings for Special Purposes .....	298
12.6.1 Echelle Gratings .....	298
12.6.2 Gratings in the Infrared .....	300
12.6.3 Gratings in the Far Ultraviolet .....	301
Further Reading .....	303

<b>13. Interferometric Spectrometers</b> .....	305
13.1 Basic Concepts of Interferometric Spectroscopy .....	305
13.2 Resolution and Throughput .....	307
13.3 Fabry–Perot Interferometers:	
Intensity Distribution and Resolution .....	309
13.3.1 The Airy Distribution and Its Properties .....	310
13.3.2 Resolving Power .....	313
13.4 Use of Fabry–Perot Interferometers .....	315
13.4.1 Limitations .....	315
13.4.2 Methods of Use .....	317
13.4.3 Particular Applications .....	319
13.5 Michelson Interferometers	
and Fourier Transform Spectroscopy (FTS) .....	320
13.5.1 The Interferogram and the Spectrum .....	320
13.5.2 Instrument Function and Resolution .....	324
13.5.3 Sampling and Aliasing .....	327
13.6 Practical Aspects of Fourier Transform Spectroscopy .....	330
13.6.1 The Scanning Interferometer .....	330
13.6.2 Computing and Control .....	332
13.6.3 Limitations and Advantages .....	333
13.7 Spatially Heterodyned, Non-scanning Interferometers	
for FTS .....	334
Further Reading .....	337
<b>14. Laser Spectroscopy</b> .....	339
14.1 Introduction to Lasers .....	339
14.2 Types of Laser .....	343
14.2.1 Fixed-Frequency Lasers .....	343
14.2.2 Tunable Lasers .....	344
14.2.3 Frequency Doubling and Mixing .....	346
14.3 Optical Pumping and Saturation .....	347
14.4 Spectral and Temporal Laser Bandwidths .....	349
14.5 Laser Absorption and Excitation Experiments .....	351
14.6 Doppler-Free Spectroscopy .....	354
14.7 Trapping and Cooling of Atoms and Ions .....	357
14.8 Comments on Laser	
versus ‘Conventional’ Spectroscopy .....	358
Further Reading .....	358
<b>15. Light Sources and Detectors</b> .....	359
15.1 Emission Spectroscopy .....	360
15.1.1 Flames .....	360
15.1.2 Arcs .....	360
15.1.3 Sparks .....	361
15.1.4 Glow Discharges .....	362

15.1.5	Inductively Coupled Plasmas . . . . .	363
15.1.6	Beam Foil Source . . . . .	363
15.1.7	Laser-Produced Plasmas . . . . .	364
15.1.8	Shock Tubes . . . . .	364
15.1.9	Fusion Plasma Devices . . . . .	365
15.1.10	Electron Beam Ion Trap . . . . .	366
15.2	Absorption Spectroscopy . . . . .	366
15.2.1	Continuum Sources for the Visible Region . . . . .	367
15.2.2	Continuum Sources for the Infrared and Ultraviolet Regions . . . . .	368
15.3	General Remarks on Detectors . . . . .	370
15.4	Detectors for the Infrared . . . . .	373
15.5	Detectors for the Visible and Ultraviolet . . . . .	375
15.6	Multichannel Detectors . . . . .	377
15.6.1	Array Detectors . . . . .	377
15.6.2	Photographic Emulsions . . . . .	378
	Further Reading . . . . .	380
<b>16.</b>	<b>Experimental Determination of Transition Probabilities and Radiative Lifetimes . . . . .</b>	<b>381</b>
16.1	Emission Measurements . . . . .	383
16.2	Absorption and Dispersion Measurements . . . . .	385
16.2.1	Integrated Absorption . . . . .	386
16.2.2	Equivalent Width . . . . .	386
16.2.3	Hook Technique . . . . .	387
16.3	Lifetime Measurements . . . . .	391
16.3.1	Delay Methods . . . . .	391
16.3.2	Beam Measurements . . . . .	394
16.3.3	Hanle Effect . . . . .	396
16.4	Combinations of Methods . . . . .	398
	Further Reading . . . . .	400
<b>17.</b>	<b>Uncertainties in Experimental Measurements . . . . .</b>	<b>403</b>
17.1	Signal-to-Noise Ratios . . . . .	404
17.1.1	Sources of Noise . . . . .	404
17.1.2	SNR in Fourier Transform Spectrometry (FTS) . . . . .	405
17.1.3	SNRs in Grating and FT Spectrometry . . . . .	406
17.2	Wavelength Measurements . . . . .	407
17.2.1	Measurement Precision and Wavelength Calibration . . . . .	407
17.2.2	Background to Wavelength Standards . . . . .	408
17.2.3	Frequency-Based Standards . . . . .	410
17.3	Intensity Measurements . . . . .	411
17.3.1	Absorption Measurements . . . . .	411
17.3.2	Emission Measurements . . . . .	412
17.3.3	Radiometric Standards . . . . .	413
	Further Reading . . . . .	414

<b>Appendix</b> .....	415
A.1 Perturbation Theory .....	415
A.1.1 Time-Independent First-Order Perturbation .....	415
A.1.2 Time-Independent Second-Order Perturbation .....	417
A.1.3 Time-Dependent Perturbation .....	417
A.2 Physical Constants .....	419
A.2.1 General Constants .....	419
A.2.2 Spectroscopic Constants .....	420
A.2.3 Energy Conversion .....	420
<b>References</b> .....	421
<b>Index</b> .....	425
