

Contents

1. Generalities

1.1 The Rationale for QCD	1
1.2 Perturbative Expansions; S -Matrix and Green's Functions; Wick's Theorem	6
1.3 Path Integral Formulation of Field Theory	12

2. QCD as a Field Theory

2.1 Gauge Invariance	19
2.2 Canonical Quantization; Gauge Fixing; Covariant Gauges	22
2.3 Unitarity; Lorentz Gauges; Ghosts; Physical Gauges	25
i Covariant Gauges	25
ii Physical Gauges	30
2.4 The Becchi–Rouet–Stora Transformations	32
2.5 Functional Formalism for QCD. Gauge Invariance	35
2.6 Feynman Rules in the Path Integral Formalism	39
2.7 The Background Field Method	43
2.8 Global Symmetries of the QCD Lagrangian: Conserved Currents	45

3. Renormalization in QCD

3.1 Regularization (Dimensional)	49
3.2 Renormalization – Generalities	54
3.3 Renormalization of QCD (One Loop)	59
i μ -Renormalization	59
ii The Minimal Subtraction Scheme	63
iii Renormalization in the Background Field Formalism	69
3.4 The Renormalization Group	70
3.5 The Callan–Symanzik Equation	73
3.6 Renormalization of Composite Operators	75
3.7 The Running Coupling Constant and the Running Mass in QCD: Asymptotic Freedom	79
3.8 Heavy and Light Quarks: the Decoupling Theorem. Effective n_f , Λ	82
3.9 The Operator Product Expansion (OPE) at Short Distances. Nonperturbative Effects in Quark and Gluon Propagators	87
i Short Distance Expansion	87
ii Nonperturbative Effects in Quark and Gluon Propagators	89

4. Perturbative QCD, I. Deep Inelastic Processes

4.1	e^+e^- Annihilation into Hadrons	93
4.2	τ and Z Decays Involving Hadrons	99
	i τ Decay	99
	ii Z Decay	105
4.3	Kinematics of Deep Inelastic Scattering.	
	The Parton Model	107
	i Kinematics. Structure Functions	107
	ii The Parton Model	111
4.4	Light Cone Expansion of Products of Currents	114
4.5	The OPE for Deep Inelastic Scattering in QCD: Moments	120
4.6	Renormalization Group Analysis:	
	the QCD Equations for the Moments	126
4.7	QCD Equations for the Moments	
	to Second and Higher Orders	130
	i Nonsinglet	130
	ii Longitudinal Structure Function	132
	iii Singlet	136
4.8	The Altarelli–Parisi, or DGLAP, Method	139
4.9	General Consequences of QCD for Structure Functions	148
	i Sum Rules	148
	ii Behaviour of Structure Functions as $x \rightarrow 1$	151
	iii The Limit $x \rightarrow 0$, Nonsinglet	153
	iv The Limit $x \rightarrow 0$, Singlet	156
	v The BFKL Pomeron	159
4.10	Target Mass Corrections	160
4.11	Nonperturbative Effects in e^+e^- Annihilations	
	and Higher Twists in Deep Inelastic Scattering	162
4.12	Comparison of DIS Calculations with Experiment	165
	i Parametrizations	165
	ii Exact Reconstruction	166
	iii Structure Functions at Small x	167

5. Perturbative QCD, II. OZI Forbidden Decays; Drell–Yan Processes; Jets; SVZ Sum Rules; Exclusive Processes and so on.

5.1	OZI Forbidden Decays	173
5.2	Drell–Yan Processes	177
	i Partonic Formulation	177
	ii Radiative QCD Corrections	179
	iii The K Factor	182
5.3	Jets – Generalities	189
5.4	Jets in e^+e^- Annihilations	193
	i Two Jet Events	193
	ii Three Jet Events	197

iii Multijet Events	201
iv Gluon Jets in Quarkonium Decays	201
5.5 Jets in Hadron Physics	202
5.6 The SVZ Sum Rules	208
5.7 Exclusive Processes	214
5.8 Other Processes that can be Described with Perturbative QCD	221
i Deep Inelastic Scattering on π , K , γ Targets	221
ii Strong Interaction Corrections to Weak and Electromagnetic Decays of Hadrons	222
6. Hadrons as Bound States of Quarks	
6.1 Generalities. The Quark Model of Hadrons	227
6.2 Pole Mass and the Schrödinger Equation. Corrections	229
i Confinement. Pole Mass. Relation with the $\overline{\text{MS}}$ Mass	229
ii The Schrödinger Equation. Ladders	232
iii The Static Potential; Radiative Corrections	235
6.3 Relativistic, Radiative and Nonperturbative Corrections to Heavy Quarkonium. Evaluation of Lowest Lying $\bar{c}c$ and $\bar{b}b$ States	237
i Coulomb Potential and Relativistic Corrections	237
ii One and Two Loop Radiative Corrections to the Coulombic Potential. Mixed Radiative–Relativistic Corrections	240
iii Nonperturbative Corrections	245
iv QCD Analysis of Lowest Lying $\bar{c}c$ and $\bar{b}b$ States	249
6.4 Higher Excited $\bar{c}c$ and $\bar{b}b$ States. Confinement Forces. Effective Potentials	252
6.5 The Constituent Quark Model	258
6.6 Bag Models	260
i Introduction. Bogoliubov’s Model	260
ii The MIT Bag	263
7. Light Quarks; PCAC; Chiral Dynamics; the QCD Vacuum	
7.1 Mass Terms and Invariances: Chiral Invariance	265
7.2 Wigner–Weyl and Nambu–Goldstone Realizations of Symmetries	270
7.3 PCAC and Light Quark Mass Ratios	272
7.4 Bounds and Estimates of Light Quark Masses	276
7.5 The Decay $\pi^0 \rightarrow \gamma\gamma$; the Axial Anomaly	279
7.6 The $U(1)$ Problem. The Gluon Anomaly	287
7.7 The θ Parameter; the QCD Vacuum; the Effect of Massless Quarks; Solution to the $U(1)$ Problem	290

8. Instantons

8.1 The WKB Approximation in the Path Integral Formalism; Tunnelling	297
8.2 Euclidean QCD	300
8.3 Instantons	302
8.4 Connection with the Topological Quantum Number and the QCD Vacuum	307

9. Lattice QCD

9.1 Quarks (and Gluons) on an Euclidean Lattice	313
9.2 Gluons (and Quarks) on the Lattice. Paths and Loops. The Wilson Action	318
i Abelian Gauge Theories	318
ii QCD. The Wilson Action	324
9.3 Feynman Rules on the Lattice. Renormalization Group. Connection with the Continuum Parameters	326
i Feynman Rules	326
ii Renormalization, and Renormalization Group	328
9.4 The Wilson Loop. Strong Coupling. Confinement	330
9.5 Observable Consequences of Lattice QCD	336
i Wilson Loop; String Tension; Connection Between Long and Short Distances	336
ii Hadronization of Jets	338
iii Locality of the QCD Vacuum. Long Distance Behaviour of Invariant Propagators. Constituent Quark Mass	341
iv Masses and Other Hadron Properties. Glueballs	343

10. The Perturbative QCD Series. The Parameters of QCD

10.1 The Functions β , γ_m	347
10.2 The Character of the QCD Perturbative Series. Renormalization Scheme Dependence of Calculations and Parameters. Renormalons. Saturation	350
i Truncation and Renormalization Effects	350
ii Renormalons	353
iii Saturation	358
iv The Limit of Accuracy of QCD Calculations	360
10.3 Coupling Constants: θ , α_s , Λ	362
i The parameter θ	362
ii Λ and α_s	362
10.4 Quark Masses	365
10.5 Condensates	367
i Quark Condensates, $\langle \bar{q}q \rangle$	368
ii The Gluon Condensate, $\langle \alpha_s G^2 \rangle$	369

Appendices

Appendix A: γ -Algebra in Dimension D	375
Appendix B: Some Useful Integrals	376
Appendix C: Group-theoretic Quantities. Group Integration ..	380
Appendix D: Feynman Rules for QCD	383
Appendix E: Feynman Rules for Composite Operators	388
Appendix F: Some Singular Functions	389
Appendix G: Kinematics, Cross Sections, Decay Rates. Units ..	390
Appendix H: Functional Derivatives	392
Appendix I: Gauge Invariant Operator Product	393
References	395
Subject Index	409
