

Table of Contents

Java

- From Flop to MegaFlops: Java for Technical Computing 1
J. E. Moreira, S. P. Midkiff and M. Gupta
(IBM T.J. Watson Research Center)
- Considerations in HPJava Language Design and Implementation 18
Guansong Zhang, Bryan Carpenter, Geoffrey Fox, Xinying Li
and Yuhong Wen (Syracuse University)

Locality

- A Loop Transformation Algorithm Based on Explicit Data Layout
Representation for Optimizing Locality 34
M. Kandemir (Northwestern University), *J. Ramanujam* (Louisiana
State University), *A. Choudhary* (Northwestern University) and
P. Banerjee (Northwestern University)
- An Integrated Framework for Compiler-Directed Cache Coherence
and Data Prefetching 51
Hock-Beng Lim (University of Illinois) and *Pen-Chung Yew*
(University of Minnesota)
- I/O Granularity Transformations 68
Gagan Agrawal (University of Delaware)

Network Computing

- Stampede*: A Programming System for Emerging Scalable
Interactive Multimedia Applications 83
Rishiyur S. Nikhil (Compaq), *Umakishore Ramachandran* (Georgia Tech),
James M. Rehg (Compaq), *Robert H. Halstead, Jr.* (Curl Corporation),
Christopher F. Joerg (Compaq) and *Leonidas Kontothanassis* (Compaq)
- Network-Aware Parallel Computing with Remos 100
Bruce Lowekamp, Nancy Miller, Dean Sutherland, Thomas Gross,
Peter Steenkiste and Jaspal Subhlok (Carnegie Mellon University)
- Object-Oriented Implementation of Data-Parallelism on
Global Networks 120
Jan Borowiec (GMD FIRST)

Fortran

- Optimized Execution of Fortran 90 Array Language on
Symmetric Shared-Memory Multiprocessors 131
Vivek Sarkar (IBM T.J. Watson Research Center)

Fortran RED — A Retargetable Environment for Automatic Data Layout 148
Ulrich Kremer (Rutgers University)

Automatic Parallelization of C by Means of Language Transcription 166
Richard L. Kennell and Rudolf Eigenmann (Purdue University)

Irregular Applications

Improving Compiler and Run-Time Support for Irregular Reductions Using Local Writes 181
Hwansoo Han and Chau-Wen Tseng (University of Maryland)

Beyond Arrays — A Container-Centric Approach for Parallelization of Real-World Symbolic Applications 197
Peng Wu and David Padua (University of Illinois)

SIPR: A New Framework for Generating Efficient Code for Sparse Matrix Computations 213
William Pugh and Tatiana Shpeisman (University of Maryland)

HPF-2 Support for Dynamic Sparse Computations 230
R. Asenjo (University of Málaga), *O. Plata* (University of Málaga), *J. Touriño* (University of La Coruña), *R. Doallo* (University of La Coruña) and *E.L. Zapata* (University of Málaga)

Instruction Scheduling

Integrated Instruction Scheduling and Register Allocation Techniques 247
David A. Berson (Intel Corporation), *Rajiv Gupta* (University of Pittsburgh) and *Mary Lou Soffa* (University of Pittsburgh)

A Spill Code Placement Framework for Code Scheduling 263
Dingchao Li, Yuji Iwahori, Tatsuya Hayashi and Naohiro Ishii (Nagoya Institute of Technology)

Copy Elimination for Parallelizing Compilers 275
David J. Kolson, Alexandru Nicolau and Nikil Dutt (University of California, Irvine)

Potpourri

Compiling for SIMD Within a Register 290
Randall J. Fisher and Henry G. Dietz (Purdue University)

Automatic Analysis of Loops to Exploit Operator Parallelism on Reconfigurable Systems 305
Narasimhan Ramasubramanian, Ram Subramanian and Santosh Pande (University of Cincinnati)

Principles of Speculative Run-Time Parallelization 323
Devang Patel and Lawrence Rauchwerger (Texas A&M University)

Dependence Analysis

The Advantages of Instance-Wise Reaching Definition Analyses in Array (S)SA	338
<i>Jean-François Collard</i> (University of Versailles)	
Dependency Analysis of Recursive Data Structures Using Automatic Groups	353
<i>D. K. Arvind and T. A. Lewis</i> (The University of Edinburgh)	
The I+ Test	367
<i>Weng-Long Chang and Chih-Ping Chu</i> (National Cheng Kung University)	
Author Index	383
