Part I General Aspects of Systems Science

The Dynamics of Knowledge and Ignorance: Learning the New Systems Science

P.M. Allen 3

1	Complexity, Simplicity and Knowledge	4
1.1	The Assumptions Used to Reduce Complexity to Simplicity . . .	4
1.2	The Modelling Outcomes of Different Assumptions	6
2	Models and Knowledge: Simple to Complex	6
2.1	Equilibrium Models	7
2.2	Non-Linear Dynamical Models	7
2.3	Self-Organising Systems	8
2.4	Evolutionary Complex Systems	9
2.5	The General Structure of Modelling	16
3	Innovation and Design in Complex Systems	18
3.1	A Stochastic Dynamics of New Ideas	19
3.2	Exploring, Generating Knowledge and Hill-Climbing	21
3.3	Trust, Experience and Chance	25
4	The Law of Excess Diversity	26
5	Conclusions	28
	References	29

Chaos, Computability, Determinism, and Freedom: A Critical Analysis from a System-Theoretic Point of View

Theodor Leiber 31

1	Introduction	31
2	Deterministic Chaos and Its Epistemological Implications: Determinism vs Determinability/Computability	33
3	Chaos Research, Quantum Theory, and Freedom	38
4	System-Theoretic Determination Model of Action-Decision- Freedom, Neuronal Realization, and Responsibility	40
5	Conclusions and Summary	47
	References	49

	The Function of Systems Concepts – From Systems Theory to Systems Science	
	<i>Eberhard Umbach</i>	51
1	Formulation of the Problem	51
2	Historical Aspects	52
3	Priorities of Systems Concepts with Different Authors	55
4	Criticism of Systems Concepts	56
4.1	Some Critical Authors	56
4.1.1	Ida Hoos (1972)	56
4.1.2	Robert Lilienfeld (1978)	57
4.1.3	Czayka (1974)	59
4.1.4	Kappel and Schwarz (1981)	60
4.1.5	Klaus Mueller 1996	61
4.2	Summary of the Aspects of Criticism	65
5	Evaluation of Criticisms	67
6	Conclusions for Systems Science	69
	References and Further Reading	70
	Fuzzy Aspects of Systems Science	
	<i>William Silvert</i>	73
1	Introduction	73
2	What is Fuzzy Set Theory?	74
3	Some Applications of Fuzzy Set Theory to Systems Issues	75
3.1	Remote Sensing	75
3.2	Ecological Examples	75
3.3	Classification of Environmental Impacts	76
3.4	Evaluation of Ambiguous Data	77
3.5	Simplification and Clarification	78
3.6	Fuzzy Control	78
3.7	Forecasting	79
3.8	Fuzzy Classification and “Lumping”	80
4	Summary	81
	References	81
	Part II Biological Systems	
	On the Phenomenon of Bimodality in Aggregation Pattern Dynamics	
	<i>E. G. D’Ambrogio</i>	85
1	Introduction	85
2	The Reaction-Diffusion Model	86
3	The Stochastic Model	88
