

Table of Contents

Contributors.....	xxxix
Preface.....	xli
A* Algorithm	1
AHP.....	1
AI.....	1
ANP.....	1
ARIMA	1
Acceptance sampling	1
Accounting prices.....	1
Accreditation	1
Active constraint.....	1
Active set methods	1
Activity.....	1
Activity-analysis problem	1
Activity level	1
Acyclic network	1
Adjacent.....	1
Adjacent (neighboring) extreme points.....	2
Advertising <i>Kalyanaram/Bass</i>	2
Affiliated values bidding model.....	4
Affine transformation	4
Affine-scaling algorithm.....	5
Agency theory	5
Agriculture and the food industry <i>Bender/Kahan</i>	5
Air force operations analysis <i>Thomas/Sheldon</i>	8
Airline industry operations research <i>Clarke/Ryan</i>	10
Algebraic modeling languages for optimization <i>Rosenthal</i>	16
Algorithm.....	19
Algorithmic complexity	19
Alternate optima.....	19
Alternate paths	19
Analytic combat model	19
Analytic hierarchy process <i>Saaty</i>	19
Analytic network process <i>Saaty</i>	28
Animation	35
Anticycling rules.....	35

Antithetic random variates	35
Applied probability	35
ARC	35
Archimedean axiom	35
Arrival process	35
Arrival-point distribution	35
Arrow diagram	35
Artificial intelligence <i>Greenberg/De Jong</i>	35
Artificial variables	38
Assignment problem	38
Automation in manufacturing and services <i>Singhal/Agrawal/Liberatore</i>	38
Availability <i>Ushakov</i>	44
Averch-Johnson hypothesis	44
BTRAN	45
Backward chaining	45
Backward Kolmogorov equations	45
Backward chaining	45
Backward-recurrence time	45
Balance equations	45
Balking	45
Banking <i>Zenios</i>	45
Bar chart	49
Barrier functions and their modifications <i>Polyak</i>	49
Basic feasible solution	53
Basic solution	53
Basic variables	53
Basis	53
Basis inverse	53
Batch vector	53
Batch shops	53
Battle modeling <i>Hartley</i>	53
Bayesian decision theory, subjective probability and utility <i>Laskey</i>	57
Bayes rule	59
Beale tableau	59
Benders decomposition method	60
Best-fit decreasing algorithm	60
Bidding models <i>Rothkopf</i>	60
Big-M method	62
Bilevel linear programming	62
Binary variable	62
Bin-packing <i>Wang/Coleman</i>	62
Bipartite graph	66
Birth-death process	66
Bland's anticycling rules	66
Blending problem	66

Block-angular system	66
Block pivoting	66
Block-triangular matrix	66
Bootstrapping	66
Bootstrapping: resampling methodology <i>Friedman/Friedman</i>	66
Bounded rationality	69
Bounded variable	69
Branch	69
Branch and bound	69
Brownian motion	69
Buffer	70
Bulk queues	70
Burke's theorem	70
Busy period	70
Calculus of variations <i>Nash</i>	71
Call centers <i>Grossman/Oh/Rohleder/Samuels</i>	73
Call priorities	76
Candidate rules	76
Capacitated transportation problem	76
Capital budgeting <i>Levary</i>	76
Case	79
CDF	79
Center for naval analyses <i>Harris</i>	79
Certainty equivalence <i>Guyse</i>	83
Certainty factor	84
Chain	84
Chance-constrained programming	84
Chance constraint	84
Chaos	84
Chapman-Kolmogorov equations	84
Chinese postman problem <i>Stewart</i>	84
Choice strategies	87
Choice theory <i>Adelman</i>	87
Chromatic number	90
Chromosome	90
CIM	90
Circling	90
Classical optimization	90
Closed network	90
Cluster analysis <i>Aronson/Iyer</i>	91
Cobb-Douglas production function	94
COEA	94
Coefficient of variation	94
Cognitive mapping	94
Coherent system	94

Column generation.....	94
Column vector.....	94
Combat model.....	94
Combat simulation.....	94
Combinatorial and integer optimization <i>Hoffman/Padberg</i>	94
Combinatorial explosion.....	102
Combinatorial optimization by simulated cross-entropy <i>Rubinstein</i>	102
Combinatorics <i>Lawler</i>	106
Common random variates.....	108
Common value bidding model.....	108
Communications networks <i>Sykes</i>	108
Community operations research.....	114
Complementarity condition.....	115
Complementary pivot algorithm.....	115
Complementarity problems <i>Cottle</i>	115
Complementary slackness theorem.....	118
Computational complexity.....	119
Computational geometry <i>Beichl/Bernal/Witzgall/Sullivan</i>	122
Computational organization theory <i>Carley/Wallace</i>	126
Computational probability.....	132
Computer science and operations research interfaces <i>Sharda</i>	132
Concave function.....	135
Conclusion.....	135
Condition number.....	135
Cone.....	135
Congestion system.....	135
Conjoint analysis.....	135
Conjugate gradient method.....	135
Connected graph.....	135
Conservation of flow.....	136
Constrained optimization problem.....	136
Constraint.....	136
Constraint programming.....	136
Constraint qualification.....	141
Construction applications <i>Perry</i>	141
Continuous-time Markov chain (CTMC).....	143
Control charts.....	143
Controllable variables.....	143
Control theory.....	143
Convex combination.....	146
Convex cone.....	147
Convex function.....	147
Convex hull.....	147
Convex polyhedron.....	147
Convex-programming problem.....	147

Convex set	147
Convexity rows	147
Corner point	147
Corporate strategy <i>Hax/Majluf</i>	147
Cost analysis <i>Balut/Gulledge</i>	152
Cost coefficient	155
Cost effectiveness analysis <i>Womer</i>	155
Cost range	158
Cost row	158
Cost slope	158
Cost vector	158
COV	158
Covering problem	158
Coxian distribution	158
CPM	158
CPP	158
Cramer's rule	158
Crash cost	158
Crash time	158
Crew scheduling	158
Crime and justice <i>Barnett/Caulkins/Maltz</i>	159
Criterion cone	168
Criterion space	168
Criterion vector	168
Critical activity	168
Critical path	168
Critical path method (CPM)	168
Crossover	168
CS	169
Curse of dimensionality	169
Customer distribution	168
Cut	169
Cutset	169
Cutting stock problems <i>Haessler</i>	169
CV	174
Cybernetics and complex adaptive systems <i>Sage</i>	174
Cycle	181
Cyclic queueing network	181
Cyclic service discipline	181
Cycling	181
Dantzig-Wolfe decomposition algorithm	183
Database design	183
Data envelopment analysis <i>Cooper</i>	183
Data mining <i>Menon/Sharda</i>	191
DEA	194

Decision analysis <i>Schum</i>	194
Decision maker (DM)	198
Decision making <i>Buede</i>	199
Decision problem	200
Decision support systems <i>Vazsonyi</i>	200
Decision trees <i>Eriksen/Keller</i>	202
Decision variables	205
Decomposition algorithm	205
Degeneracy	205
Degeneracy graphs <i>Gal</i>	206
Degenerate solution.	208
Degree	208
Delaunay triangulation	208
Delay	208
Delphi method <i>Dewar/Friel</i>	208
Density	209
Density function	210
Departure process	210
Descriptive model	210
Design and control.	210
Detailed balance equations.	210
Determinant	210
Deterministic model	210
Developing countries <i>Galvão</i>	210
Development tool.	213
Devex pricing.	213
Deviation variables	213
DFR	213
Diameter	213
Diet problem	213
Digraph.	213
Diffusion approximation	213
Diffusion process	214
Dijkstra's algorithm	214
Directed graph.	214
Direction of a set	214
Directional derivative	214
Discrete-programming problem.	214
Discrete-time Markov chain (DTMC)	214
Distribution selection for stochastic modeling <i>Gross</i>	214
DMU	217
Documentation <i>Gass</i>	217
Domain knowledge	218
DSS	218
Dual linear-programming problem.	218

Dual-simplex method	218
Duality theorem	218
Dualplex method	218
Dummy arrow	218
Dynamic programming <i>White</i>	218
Earliest finish time.....	221
Earliest start time.....	221
Econometrics <i>Kelejian/Prucha</i>	221
Economic order quantity.....	223
Economic order quantity model extensions <i>Lev</i>	223
Economics and operations research <i>Murphy</i>	225
Edge	231
Educational issues in business schools <i>Grossman/Powell</i>	231
Efficiency.....	235
Efficiency frontier	235
Efficient algorithm.....	235
Efficient point	235
Efficient solution	235
Eigenvalue.....	235
Eigenvector.....	235
Electric power systems <i>Yu</i>	235
Electronic commerce <i>Sibley</i>	239
Elementary elimination matrix	243
Elimination method.....	243
Ellipsoid algorithm.....	243
ELSP	243
Embedding	243
Emergency services <i>Chelst</i>	243
EMS.....	249
Engineering applications <i>Levary</i>	249
Entering variable	255
Environmental systems analysis <i>ReVelle</i>	255
EOQ.....	260
Ergodic theorems.....	260
Erlang.....	260
Erlang B formula	260
Erlang C formula	261
Erlang delay model	261
Erlang distribution.....	261
Erlang loss model.....	261
Error analysis	261
ETA matrix.....	261
ETA file	261
ETA vector	261
Ethics in the practice of operations research <i>Engel</i>	261

Euler tour	263
Evaluation.....	263
Event-driven simulation.....	264
Evolutionary algorithms <i>Michalewicz/Schoenauer</i>	264
EVOP	269
Ex ante forecasts	269
Exclusive-or node.....	269
Expected utility theory.....	270
Expert systems <i>Holsapple/Whinston</i>	270
Exploratory modeling <i>Bankes</i>	273
Exponential arrivals	275
Exponential-bounded (-time) algorithm.....	275
Exponential smoothing <i>Brown</i>	275
Extremal	277
Extremal column	277
Extremal problem	277
Extreme direction	277
Extreme point	277
Extreme point solution	277
Extreme ray	277
Face validity.....	279
Facilities layout <i>Kaku</i>	279
Facility location <i>Chhajed/Francis/Lowe</i>	283
Factorable programming <i>Jackson</i>	285
Failure-rate function	288
Farkas' lemma.....	289
Farrell measure.....	289
Fathom.....	289
FCFS.....	289
Feasible basis	289
Feasible region	289
Feasible solution	289
FEBA	289
Feedback queue	289
Field analysis <i>Kreiner</i>	289
FIFO	292
Financial markets <i>Board/Sutcliffe/Ziemba</i>	292
Finite source	299
Fire models and applications <i>Levin/Hall</i>	300
Firing a rule	303
First feasible solution.....	303
First-fit decreasing algorithm.....	303
First-order conditions.....	303
Fixed-charge problem.....	303
Fleet assignment.....	303

Flexible manufacturing	303
Flight scheduling	303
Float	304
Flow	304
Flow shop	304
Flow time	304
FMS.....	304
Forecasting <i>Armstrong</i>	304
Forward Kolmogorov equations	310
Forward chaining	310
Forward-recurrence time.....	310
Fourier-Motzkin elimination method.....	310
Fractional programming <i>Schaible</i>	310
Fractional-programming problem.....	313
Framing	313
Free float	313
Frank-Wolfe method	314
Free variable	314
Freight routing	314
FTRAN	314
Fuzzy sets <i>Gass</i>	314
GA	317
Game theory <i>Lucas</i>	317
Gaming <i>Schwabe</i>	321
Gamma distribution.....	323
Gantt charts <i>Nahmias</i>	324
Gaussian elimination.....	325
Gauss-Jordan elimination method	325
Gene	326
Generalized Erlangian distribution	326
Generalized upper-bounded (GUB) problem.....	326
Generator (of a Markov process).....	326
Genetic algorithms.....	326
Geographic information systems <i>Gray/Suchocki/Horan</i>	326
Geometric programming <i>Ecker</i>	330
GERT	332
GIS.....	332
Global balance equations	332
Global climate change models <i>Gottinger</i>	332
Global maximum (minimum).....	335
Global models <i>Gass</i>	335
Global solution	336
Goal constraints	336
Goal programming <i>Schniederjans</i>	337
Gomory cut.....	338
Gordan's theorem.....	339

GP	339
Gradient vector	339
Graeco-Latin square	339
Graph	339
Graphical evaluation and review technique	339
Graphics	339
Graph theory <i>Shier</i>	339
Greedy algorithm	342
GRG method	342
Group decision computer technology <i>Buede</i>	343
Group decision making <i>Zahedi</i>	343
GUB	350
Half space	351
Hamiltonian tour	351
Hazard rate	351
Health care systems <i>Gascon/Pierskalla</i>	351
Heavy-traffic approximation	355
Hessenberg matrix	355
Hessian matrix	355
Heterogeneous Lanchester equations	355
Heuristic procedure	356
Hidden Markov models	356
Hierarchical production planning <i>Hax</i>	359
Higher education <i>Hearn/Lough</i>	363
Hirsch conjecture	366
History of early British OR <i>Kirby</i>	366
Homogeneous Lanchester equations	369
Homogeneous linear equations	370
Homogeneous solution	370
Horn clause	370
Hospitals <i>Ozcan/Ozgen/Morey</i>	370
Hundred percent rule	373
Hungarian method	373
Hypercube queueing model <i>Larson</i>	373
Hyperexponential distribution	377
Hypergame analysis	377
Hyperplane	377
Identity matrix	379
IFORS	379
IFR	379
IIASA	379
IID	379
Imbedded Markov chain	379
Implementation <i>Woolsey</i>	379
Implementation in the public sector <i>Chelst</i>	380

Implicit enumeration.....	385
Implicit price.....	385
Importance sampling.....	385
Impossibility theorem.....	385
Inactive constraint.....	385
Incidence matrix.....	385
Incident.....	385
Independent float.....	385
Independent private values bidding model.....	385
Indirect costs.....	385
Industrial applications <i>Singhal/Fortuin/van Beek/Van Wassenhove</i>	385
Industrial dynamics.....	391
Industrial engineering and operations research — the interface <i>Wilhelm/Jarvis</i>	391
Infeasible solution.....	393
Inference engine.....	393
Infinitesimal perturbation analysis.....	393
Influence diagrams.....	394
Information systems and database design in OR/MS <i>Müller-Merbach</i>	394
INFORMS.....	396
Initial feasible solution.....	396
Information technology benefits <i>Samuelson</i>	396
Input process.....	398
Input-output analysis.....	398
Input-output coefficients.....	399
Insensitivity.....	399
Institute for Operations Research and the Management Sciences (INFORMS).....	399
Integer goal programming.....	399
Integer-programming problem.....	399
Intelligent manufacturing systems.....	399
Intensity function.....	399
Interactive multiple-objective mathematical programming <i>Pet-Edwards/Mollaghasemi</i>	399
Interchange heuristic.....	402
Interfering float.....	402
Interior point.....	402
Interior-point methods <i>Terlaky/Boggs</i>	402
International Federation of Operational Research Societies (IFORS).....	411
International Institute for Applied Systems Analysis (IIASA).....	411
Intervention model.....	411
Inventory modeling <i>Silver</i>	411
Inverse matrix.....	418
IP.....	418
IS.....	418
Isomorphic graph.....	418
ISOP 9000 standard.....	418
Isoquant.....	418

Iteration	418
IVHS	418
Jackson network	419
JIT	419
Job shop scheduling <i>Rabelo/Jones</i>	419
Johnson's theorem	429
Judgmental bootstrapping	429
Just-in-time (JIT) manufacturing	429
Karmarkar's algorithm	431
Karush-Kuhn-Tucker (KKT) conditions	431
Kendall's notation	431
Kilter conditions	431
KKT conditions	431
Klee-Minty problem	431
Knapsack problem	431
Knapsack problems with nonlinearities <i>Bretthauer/Shetty</i>	432
Knowledge acquisition	435
Knowledge base	435
Knowledge engineer	435
Königsberg bridge problem	435
König's theorem	435
Kruskal's algorithm	435
Kuhn-Tucker (KT) conditions	435
Lack of memory	437
Lagrange multipliers	437
Lagrangian decomposition	437
Lagrangian function	437
Lagrangian relaxation	437
Lanchester attrition	437
Lanchester's equations <i>Engel</i>	437
Laplace-Stieltjes transform	440
Laplace transform	440
Large-scale systems <i>Ho</i>	440
Latest finish time	442
Latest start time	442
Latin square	443
LCFS	443
LCP	443
LDU matrix decomposition	443
LEARNING <i>Buck</i>	443
Learning curves <i>Loerch</i>	445
Least-squares analysis	448
Leontief matrix	448
Level crossing methods <i>Brill</i>	448
Level curve	450
Lexicographic ordering	450

Lexico-positive (negative) vector	450
LGP	450
Libraries <i>Reisman/Xu</i>	450
LIFO	452
Likelihood ratio.....	452
Limiting distribution	452
Lindley's equation.....	452
Line	452
Linear combination	453
Linear equation	453
Linear-fractional programming problem	453
Linear functional	453
Linear inequality.....	453
Linear programming <i>Hillier</i>	453
Line segment	457
Lipschitz.....	457
Little's Law <i>Albin</i>	457
Little's law in distributional form <i>Servi</i>	458
Local balance equations.....	459
Local improvement heuristic	459
Local maximum	459
Local minimum.....	459
Local optimum	459
Local solution	459
Location analysis <i>ReVelle</i>	459
Logical variables.....	465
Logic programming	465
Logistics <i>Solomon</i>	465
Log-linear model.....	468
Longest-route problem.....	468
Loss function	468
Lottery	468
Lower-bounded variables	469
Lowest index anticycling rules	469
LP.....	469
LU matrix decomposition	469
MAD	471
Maintenance <i>Ushakov</i>	471
MAKESPAN	471
Malcolm Baldrige award	471
Manhattan metric	471
Manpower planning <i>Bartholomew</i>	471
Manufacturing	473
MAP.....	473
Marginal value (cost)	473

Marketing <i>Eliashberg/Lilien/Wind</i>	473
Markov chain equations <i>Stewart</i>	477
Markov chains <i>Harris</i>	481
Markov decision processes <i>White</i>	484
Markovian arrival process (MAP)	486
Markov processes <i>Miller</i>	486
Markov property	490
Markov random field	490
Markov renewal process	490
Markov routing	490
Marriage problem	490
Master problem	490
Matching <i>Eglese</i>	490
Material handling <i>Rosenblatt</i>	492
Material requirements planning	495
Mathematical model	495
Mathematical programming	495
Mathematical-programming problem	496
Mathematical-programming society	496
Mathematical-Programming System (MPS)	496
Matrices and matrix algebra <i>Tucker</i>	496
Matrix-analytic stochastic models <i>Neuts</i>	499
Matrix game	503
Matrix geometric	503
MAUT	503
Max-flow min-cut theorem	503
Maximum	503
Maximum feasible solution	503
Maximum-flow network problem	503
Maximum matching problem	503
MCDM	503
Measure of effectiveness (MOE)	503
Medical practice and health care management <i>Ozgen/Flagle</i>	503
Memoryless property	508
Menu planning	508
Metagame analysis	508
Method of stages	508
Military operations other than war <i>Hartley</i>	508
Military operations research <i>Thomas/Sheldon</i>	513
MIMD	516
Minimum	516
Minimum-cost network-flow problem	516
Minimum (maximum) feasible solution	516
Minimum spanning tree problem	517
Minor	517

MIP	517
MIS	517
Mixed-integer programming problem (MIP).....	517
Mixed network	517
Model	517
Model accreditation <i>Gass</i>	517
Model builder's risk.....	518
Model evaluation <i>Gass</i>	518
Model management <i>Krishnan</i>	519
Model testing	523
Model user's risk	523
Model validation.....	523
Model verification.....	523
MODI	523
