In the Memory of Shlomo Alexander
Pierre-Gilles de Gennes 1

1 Topological Considerations in Superconductivity
Jacob Rubinstein 3
1.1 Introduction 3
1.2 Introduction to the Ginzburg–Landau Model 4
1.3 Permanent Currents 5
1.4 The Little–Parks Paradigm 8
1.5 Ginzburg–Landau Model on Graphs 9
1.6 The Zero Set 17
1.7 Other Problems with Topological Flavor 20
1.7.1 Josephson Junctions 20
1.7.2 Vortex Lines 21
References 21

2 The de Gennes–Alexander Theory of Superconducting Micronetworks
José I. Castro, Arturo López 23
2.1 Introduction 23
2.1.1 The Ginzburg–Landau Theory 24
2.1.2 de Gennes–Alexander Linear Approach for Micronetworks . . 26
2.1.3 Symmetry Analysis in the dGA Theory 30
2.2 Some Simple Applications of the dGA Theory to Symmetric Micronetworks 34
2.2.1 The Yin-Yang 34
2.2.2 The Double Yin-Yang 36
2.2.3 Wheatstone Bridge 38
2.2.4 The Basic Triangular Gasket 40
2.3 The dGA Theory for Extended Micronetworks 43
2.3.1 Geometrical Properties of Ladder Systems 43
2.3.2 Nodal Equations and Phase Transition Boundaries 46
2.3.3 Nodal Order Parameters 50
2.3.4 Current Distribution near the Phase Transition 52

2.3.5 Some Features of the Ladders 53
2.3.6 Square and Triangular Networks 55
2.3.7 Incommensurate, Fractal and Disordered Systems 57
2.4 Beyond de Gennes–Alexander Theory: Inside the Phase Diagram . 59
References 61

3 Nodal Sets, Multiplicity and Superconductivity in Non-simply Connected Domains
Bernard Helffer, Maria Hoffmann-Ostenhof, Thomas Hoffmann-Ostenhof, Mark Owen 63
3.1 Zero Sets in Superconductivity 63
3.2 Bifurcation from Normal Solutions. Preliminaries 65
3.3 The Linear Schrödinger Operator with Magnetic Field 66
3.4 The Operator K 67
3.5 Bifurcation for Special Spaces 69
3.6 The Toy Model 70
3.7 Variation of the Ground State Energy 72
3.8 Nodal Sets 73
3.9 A Twofold Riemannian Covering Manifold 77
3.10 About the Multiplicity 79
3.11 About the Maximality at Circulation $\frac{1}{2}$ 80
3.12 The Case of 3 Holes 83
References 84

4 Connectivity and Flux Confinement Phenomena in Nanostructured Superconductors
Victor V. Moshchalkov, Vital Bruyndoncx, Lieve Van Look 87
4.1 Introduction 87
4.1.1 Ginzburg–Landau Theory 87
4.1.2 Fluxoid Quantization 88
4.1.3 Type-I Versus Type-II Superconductivity 89
4.1.4 Surface Nucleation of Superconductivity 91
4.1.5 Solution of the Linear GL Equation in Cylindrical Coordinates 94
4.2 Connectivity Effects in Bulk Superconductors 96
4.3 Nanostructured Superconductors: Single Plaquettes 101
4.3.1 Boundary Conditions 101
4.3.2 'Mesoscopic' Superconductors 102
4.3.3 Nucleation of Superconductivity in a Loop 103
4.3.4 Nucleation of Superconductivity in a Disk 105
4.3.5 Nucleation of Superconductivity Around an Antidot 107
4.3.6 Nucleation of Superconductivity in a Wedge 108
4.4 Dimensional Crossover in a Loop of Finite Width 109

4.5 Superconducting Micronetworks: Increasing Connectivity by Adding Loops in One Dimension . . . 114
4.6 Perforated Microsquares . . . 120
4.7 Superconducting Films with an Antidot Lattice . . . 124
4.7.1 Commensurability Effects at Low Magnetic Fields . . . 126
4.7.2 The η-enhancement in High Magnetic Fields . . . 131
References . . . 135

5 Zero Set of the Order Parameter, Especially in Rings
Jorge Berger . . . 138
5.1 Introduction: The Price of Connectivity . . . 138
5.2 The de Gennes–Alexander (dGA) Approach . . . 140
5.2.1 One Loop . . . 140
5.2.2 Two Loops . . . 142
5.3 Perturbational Approach . . . 142
5.3.1 Uniform Cross Section . . . 144
5.3.2 Weakly Nonuniform Cross Section . . . 144
5.4 Rings with Finite Width . . . 147
5.4.1 Order of the Normal–Superconducting Transition . . . 149
5.4.2 Nonuniform Cross Section – Nondegenerate Perturbation . . . 153
5.4.3 Degenerate Perturbation . . . 155
5.4.4 Critical Points . . . 158
5.4.5 Vortices . . . 162
5.4.6 Inhomogeneous Fields . . . 164
5.4.7 Experimental and Numerical Evidence . . . 167
5.4.8 Josephson Junctions . . . 171
5.5 Main Conclusions . . . 172
References . . . 173

6 Persistent Currents in Ginzburg–Landau Models
Luís Almeida, Fabrice Bethuel . . . 174
6.1 Introduction . . . 174
6.2 Onset of Currents - Trapped Fluxes . . . 174
6.2.1 The Transition Temperature . . . 176
6.2.2 The Case of an Annulus . . . 181
6.2.3 General Domains . . . 182
6.3 Temperature Below T_c . . . 182
6.4 Stability of Currents once the External Field Is Removed . . . 183
6.4.1 Rewriting F . . . 183
6.4.2 Removing h_{ex} . . . 183
6.4.3 The Case Where ε Is Small . . . 183
6.4.4 The Case Where ε Is Not Small . . . 186
References . . . 186

7 On the Normal/Superconducting Phase Transition in the Presence of Large Magnetic Fields
Peter Sternberg 188
7.1 Formulation of the Problem 188
7.2 Analysis of Onset in a Disc 190
7.3 Analysis of Onset in a General Bounded Domain 194
7.4 Rigorous Justification of Boundary Localization 197
7.5 Infinite Curvature – Domains with Corners 197
References 198

8 On the Numerical Solution of the Time-Dependent Ginzburg–Landau Equations in Multiply Connected Domains
Gustavo C. Buscaglia, Carlos Bolech, Arturo López 200
8.1 Introduction 200
8.2 Numerical Method 202
8.2.1 Discretization of the TDGL Equations 202
8.2.2 External Boundary Conditions 205
8.2.3 Boundary Conditions at Holes 206
8.2.4 Discretization of the Free Energy 207
8.3 Examples 208
8.4 Concluding Remarks 212
References 213

9 Formation of Vortex–Antivortex Pairs
Sanatan Digal, Rajarshi Ray, Supratim Sengupta, Ajit M. Srivastava . . 215
9.1 Introduction 215
9.2 Theoretical Framework for Discussing Defect Formation 216
9.3 Conventional Models of Formation of Vortices and Antivortices . . . 217
9.4 A New Mechanism of Defect-Antidefect Production 220
9.5 Resonant Production of Vortex-Antivortex Pairs 222
9.6 Conclusion 228
References 229

10 The Order Parameter as a Macroscopic Quantum Wavefunction
Antony J. Leggett 230
10.1 The Free Bose Gas 230
10.2 The Interacting Bose Gas 231
10.3 Bose Gas with Internal Degrees of Freedom 232
10.4 Cooper Pairing: s-Wave Case 233
10.5 Cooper Pairs with Internal Degrees of Freedom 236
References 238

11 The Ehrenberg–Siday–Aharonov–Bohm Effect
Charles G. Kuper 239
11.1 Introduction 239
11.2 The Role of the Electromagnetic Potentials in Quantum Mechanics 239
11.3 The Aharonov–Bohm *Gedanken* Experiments 241
11.4 Early Experimental "Verification" 242
11.5 Roy's Theorems 242
11.6 Crucial Experiments 244
References 246

12 Connectivity and Superconductivity in Inhomogeneous Structures
Guy Deutscher 248
12.1 Introduction 248
12.2 The Case of a Normal-Metal/Superconductor Interface 250
12.3 Superconducting Networks 252
12.4 Granular Superconductors 254
References 255
