<b>Notations and acronyms</b>	<b>xv</b>
<b>1 Preliminaries</b>	<b>1</b>
1.1 Problem statement . . . . .	3
1.1.1 System class . . . . .	3
1.1.2 Delay effects on stability: open problem . . . . .	5
1.1.3 Delay: an uncertainty interpretation . . . . .	6
1.2 Models: representations and transformations . . . . .	8
1.2.1 System representations . . . . .	9
1.2.2 On the transformations . . . . .	11
1.2.3 Discrete/distributed delays . . . . .	14
1.2.4 Propagation models . . . . .	16
1.3 Basic results in RFDE . . . . .	20
1.3.1 The notion of state . . . . .	20
1.3.2 Solutions: definitions, existence, uniqueness . . . . .	21
1.3.3 Step method and smoothness . . . . .	22
1.4 Stability in RFDE . . . . .	24
1.4.1 Basic definitions . . . . .	24
1.4.2 Characteristic equations . . . . .	25
1.4.3 Some analytical and graphical tests . . . . .	27
1.4.4 Liapunov's second method . . . . .	30
1.5 Basic notions and stability in NFDE . . . . .	33
1.5.1 Basic results . . . . .	33
1.5.2 Characteristic equations . . . . .	34
1.5.3 Liapunov's second method . . . . .	35
1.6 Basic results in lossless propagation models . . . . .	36
1.6.1 Some definitions . . . . .	37
1.6.2 Characteristic equation . . . . .	38
1.6.3 Connections with the solutions of hyperbolic PDE . . . . .	38
1.6.4 Connections with neutral systems . . . . .	39
1.6.5 Step method . . . . .	40
1.6.6 Some remarks on IDE . . . . .	40
1.7 Special topics: degenerate Liapunov . . . . .	41
1.7.1 More definitions . . . . .	41

1.7.2	Stability result . . . . .	42
1.8	Notes and comments . . . . .	43
1.8.1	Delay equations: a brief history . . . . .	44
1.8.2	About the monograph . . . . .	46
<b>2</b>	<b>Examples</b>	<b>47</b>
2.1	Transport and communication delays . . . . .	48
2.1.1	Chemical engineering . . . . .	48
2.1.2	Combustion models . . . . .	51
2.1.3	Control strategy in vehicle following systems . . . . .	54
2.1.4	Telemanipulation systems . . . . .	57
2.1.5	Congestion avoidance in high-speed internet . . . . .	60
2.1.6	Neural Networks . . . . .	63
2.2	Delay measurements . . . . .	66
2.2.1	Active displacement control (flexible structure) . . . . .	66
2.2.2	Robots in contact with rigid environments . . . . .	68
2.3	Heredity: biology and population dynamics . . . . .	71
2.3.1	Simplified population growth model . . . . .	71
2.3.2	Interconnection structure: a source of models . . . . .	72
2.3.3	Some pulse circulation models . . . . .	74
2.4	Dynamics: Reducing / Inducing delays . . . . .	76
2.4.1	Smith principle: reducing delays . . . . .	76
2.4.2	Oscillations and delayed output . . . . .	78
2.4.3	Delayed feedback: chaotic and helicopter dynamics . . . . .	80
2.5	Propagation phenomena . . . . .	83
2.5.1	Electrical-circuit models . . . . .	83
2.5.2	Hydraulic engineering models . . . . .	85
<b>3</b>	<b>Stability sets and regions</b>	<b>87</b>
3.1	Definitions and basic ideas . . . . .	87
3.1.1	Discrete delays: definitions and related remarks . . . . .	87
3.1.2	Extensions to time-varying delays . . . . .	95
3.1.3	More general distributed delays . . . . .	96
3.1.4	On neutral systems and lossless propagation . . . . .	98
3.2	Model transformations: retarded case . . . . .	100
3.2.1	Fixed first-order transformation . . . . .	100
3.2.2	Fixed second-order transformations . . . . .	103
3.2.3	Neutral transformations . . . . .	106
3.2.4	Parametrized first-order transformations . . . . .	107
3.2.5	Control interpretations . . . . .	111
3.3	Model transformations: neutral case . . . . .	112
3.3.1	Fixed first-order transformations . . . . .	112
3.3.2	Neutral transformations . . . . .	113
3.3.3	Parametrized first-order transformations . . . . .	115
3.3.4	On lossless propagation model transformations . . . . .	116
3.4	Scalar systems . . . . .	118

3.4.1	Retarded case . . . . .	119
3.4.2	Neutral case . . . . .	124
3.5	Analysis control-based techniques . . . . .	127
3.5.1	Frequency-domain: reducing techniques . . . . .	127
3.5.2	Liapunov method: LMI solutions . . . . .	129
<b>4</b>	<b>Reducible discrete delays and LTIs</b>	<b>131</b>
4.1	Introductory remarks . . . . .	131
4.1.1	Tsyarkin and frequency-sweeping . . . . .	132
4.1.2	Kamen and multivariable polynomials . . . . .	133
4.1.3	Pseudo-delay technique and quasipolynomials . . . . .	136
4.1.4	Some necessary delay-independent conditions . . . . .	138
4.2	Lagrange multipliers . . . . .	140
4.2.1	Model transformations . . . . .	140
4.2.2	Delay transformations and approximations . . . . .	142
4.2.3	Constructing scalings . . . . .	145
4.3	Well-posedness of associated systems . . . . .	147
4.3.1	Defining interconnection schemes . . . . .	149
4.3.2	Frequency-sweeping tests . . . . .	150
4.3.3	Various criteria and related remarks . . . . .	160
4.3.4	Spectral radius and control interpretations . . . . .	166
4.3.5	Still maximum principle idea . . . . .	167
4.3.6	On the complexity issues . . . . .	168
4.4	Matrix pencils techniques . . . . .	169
4.4.1	Delay-independent criteria . . . . .	169
4.4.2	Delay-dependent criteria: first delay interval . . . . .	173
4.4.3	Delay switches: general delay intervals . . . . .	174
4.4.4	Hyperbolicity . . . . .	177
4.4.5	Related remarks in the general case . . . . .	180
4.5	Delay reduction in lossless propagation . . . . .	180
4.5.1	Frequency-sweeping tests . . . . .	181
4.5.2	Control interpretations . . . . .	184
4.5.3	Further comments . . . . .	186
4.6	Some Examples . . . . .	187
4.6.1	Controlling simple delay systems . . . . .	187
4.6.2	A linearized neural network model . . . . .	189
4.6.3	Delay measurements in active displacement . . . . .	190
4.6.4	Integro-differential models for commodity markets . . . . .	192
4.6.5	Delay circuits analysis in VLSI systems . . . . .	193
4.6.6	Lossless propagation . . . . .	193
<b>5</b>	<b>Liapunov's second method and LMIs</b>	<b>197</b>
5.1	Simple quadratic Liapunov candidates . . . . .	198
5.1.1	Scalar case . . . . .	198
5.1.2	Liapunov-Razumikhin functions . . . . .	205
5.1.3	Liapunov-Krasovskii functionals . . . . .	207

5.2	Complete quadratic Liapunov candidates . . . . .	209
5.3	Constructing and interpreting Liapunov . . . . .	212
5.3.1	An energy-based construction . . . . .	213
5.3.2	Control Liapunov functions . . . . .	216
5.3.3	Generalized Popov theory interpretations . . . . .	218
5.3.4	Liapunov and frequency-domain interpretations . . . . .	219
5.3.5	Model transformations and discretization . . . . .	220
5.4	Model transformations in retarded systems . . . . .	220
5.4.1	Neutral model transformations . . . . .	221
5.4.2	Parametrized model transformation . . . . .	223
5.5	Model transformation in neutral systems . . . . .	227
5.5.1	Neutral transformations . . . . .	228
5.5.2	Parametrized model transformations . . . . .	233
5.6	Simple distributed delay systems . . . . .	236
5.6.1	On some model transformations . . . . .	236
5.6.2	Discretization of Liapunov functionals . . . . .	237
5.7	On comparison principle . . . . .	245
5.7.1	Matrix measures: constant delays . . . . .	245
5.7.2	Matrix measures: time-varying delays . . . . .	246
5.7.3	Other measures: $M$ -matrices . . . . .	248
5.8	Examples . . . . .	248
5.8.1	Transport delay in chemical reactions . . . . .	249
5.8.2	A simple model with delay in force feedback . . . . .	250
5.8.3	On some nuclear reactors models . . . . .	251
<b>6</b>	<b>Robustness issues in closed-loop</b> . . . . .	<b>253</b>
6.1	General ideas . . . . .	253
6.1.1	Memoryless controllers . . . . .	254
6.1.2	Input delays . . . . .	254
6.1.3	Notes and comments . . . . .	255
6.2	Delay robustness of Smith controllers . . . . .	255
6.2.1	Problem formulation . . . . .	255
6.2.2	Delay effects . . . . .	256
6.3	Closed-loop stability of delay input systems . . . . .	259
6.3.1	Problem formulation . . . . .	259
6.3.2	Razumikhin approach . . . . .	261
6.3.3	IQC approach . . . . .	261
6.3.4	Artstein's model reduction . . . . .	263
6.4	Generalized Popov theory in delay systems . . . . .	265
6.4.1	Discrete delays case . . . . .	265
6.4.2	Extensions to convolution equations . . . . .	270
6.5	Passivity of delay systems . . . . .	277
6.5.1	Pointwise delay case . . . . .	278
6.5.2	Extensions to some convolution operators . . . . .	280

<b>7 Applications</b>	<b>283</b>
7.1 Delay effects in combustion models stability . . . . .	283
7.1.1 Associated low-order systems . . . . .	283
7.1.2 Second-order system . . . . .	285
7.1.3 Third-order system . . . . .	289
7.2 Delay effects in autonomous cruise control . . . . .	294
7.2.1 Problem formulation . . . . .	295
7.2.2 Individual vehicle stability . . . . .	295
7.2.3 Avoiding slinky effects . . . . .	297
7.3 Simple time-delay adaptive controllers . . . . .	298
7.3.1 Problem formulation and special cases . . . . .	299
7.3.2 Model transformation and stability analysis . . . . .	305
7.3.3 Further comments . . . . .	308
7.3.4 Extensions to the case when all states are accessible . . . . .	310
7.4 Output feedback in presence of delays . . . . .	312
7.4.1 Problem formulation . . . . .	313
7.4.2 Existence Results . . . . .	314
7.4.3 Constructing algorithms: a case study . . . . .	316
7.4.4 Stabilizing oscillations by delayed output . . . . .	317
7.5 Contact Instability Phenomenon . . . . .	318
7.5.1 Problem formulation . . . . .	318
7.5.2 Conditions for interaction force constant negative sign . . . . .	319
7.5.3 Bouncing phase analysis . . . . .	321
7.5.4 Further remarks . . . . .	325
<b>A Various definitions</b>	<b>327</b>
A.1 Matrix measures and $M$ -matrices . . . . .	327
A.1.1 Matrix measures: definitions and properties . . . . .	327
A.1.2 $M$ -matrices: definitions and properties . . . . .	328
A.2 $\mu$ -analysis . . . . .	328
A.2.1 Structured singular value . . . . .	328
A.2.2 Simple properties . . . . .	329
A.3 On the complexity of decision problems . . . . .	330
A.3.1 $\mathcal{P}$ and $\mathcal{NP}$ problems . . . . .	330
A.3.2 $\mathcal{NP}$ -completeness, $\mathcal{NP}$ -hardness . . . . .	330
A.4 Matrix pencils . . . . .	330
A.4.1 Definitions . . . . .	330
A.4.2 Dichotomy . . . . .	331
A.5 Passivity theory . . . . .	331
A.5.1 Passive systems . . . . .	331
A.5.2 Strictly passive systems . . . . .	331
<b>B Useful lemmas</b>	<b>333</b>
B.1 Barbălat lemma . . . . .	333
B.2 KYP lemma . . . . .	333
B.3 IQC filter construction . . . . .	334

<b>C</b>	<b>Computational aspects</b>	<b>335</b>
C.1	Kronecker sums and products . . . . .	335
C.1.1	Definitions . . . . .	335
C.1.2	Basic properties . . . . .	335
C.1.3	More general tensor products and sums . . . . .	337
C.2	Linear Matrix Inequality (LMI) . . . . .	338
C.2.1	Definition . . . . .	338
C.2.2	Optimization problems . . . . .	338
C.2.3	$\mathcal{S}$ -procedure . . . . .	339
C.2.4	Elimination lemma . . . . .	339
<b>D</b>	<b>Generalized Popov theory</b>	<b>341</b>
D.1	Popov “objects” . . . . .	341
D.1.1	Popov triplets . . . . .	341
D.1.2	KYP system in $J$ form . . . . .	341
D.1.3	Stabilizing solutions . . . . .	342
D.1.4	Disconjugacy . . . . .	342
D.2	Basic results . . . . .	342
D.2.1	Some matrix pencil characterizations . . . . .	342
D.2.2	Some remarks on Lur’e systems . . . . .	343
	<b>Bibliography</b>	<b>345</b>
	<b>Index</b>	<b>381</b>
