1	Introduction	1
1.1	Definitions	1
1.2	Structure and Nomenclature of Macromolecular Substances	2
1.3	Properties of Macromolecular Substances	10
1.3.1	Macromolecules in Solution	11
1.3.2	Macromolecules in the Molten State	12
1.3.3	Macromolecules in the Solid State.	14
1.3.3.1	Macromolecules in the Amorphous State.	14
1.3.3.2	Macromolecules in the Crystalline State	15
1.3.3.3	Macromolecules in the Elastomeric State.	20
1.3.4	Liquid Crystal Polymers (LCP)	21
1.4	General Literature on Macromolecules	23
1.4.1	Textbooks.	23
1.4.2	Monographs and Handbooks	23
1.4.3	Laboratory Manuals.	24
1.4.4	Nomenclature	24
1.4.5	Journals and Periodicals	25
1.5	List of General Abbreviations	29
1.6	Abbreviations for Technically Important Polymers	30
1.7	Relevant SI Units and Conversions	32
2	Methods and Techniques for Synthesis, Characterization, Processing, and Modification of Polymers	35
2.1	Methods for Synthesis of Macromolecules	35
2.2	Processes for Manufacturing Macromolecular Materials.	47
2.2.1	Particularities in the Preparation of Polymers.	47
2.2.2	Polyreactions in Bulk	49
2.2.2.1	Homogeneous Polyreactions in Bulk	49
2.2.2.2	Heterogeneous Polyreactions in Bulk.	50
2.2.3	Polyreactions in Solution.	50

2.2.4	Polyreactions in Dispersion	52
2.2.4.1	Polyreactions in Suspension	53
2.2.4.2	Polyreactions in Emulsion	53
2.2.5	General Techniques for Preparation of Macromolecular Substances in the Laboratory	57
2.2.5.1	Safety in the Laboratory	57
2.2.5.2	Working with Exclusion of Oxygen and Moisture	57
2.2.5.3	Purification and Storage of Monomers	58
2.2.5.4	Reaction Vessels for Polymerization Reactions	60
2.2.5.5	Control and Termination of Polymerization Reactions	62
2.2.5.6	Isolation of Polymers	64
2.2.5.7	Purification and Drying of Polymers	65
2.3	Characterization of Macromolecules	66
2.3.1	Solvents and Solubility	67
2.3.2	Determination of Molecular Weight of Polymers	71
2.3.2.1	Determination of Solution Viscosity of Polymers	73
2.3.2.2	Determination of the End Groups of Polymers	80
2.3.3	Fractionation of Polymers	81
2.3.3.1	Analysis of Fractionation Data	84
2.3.3.2	Fractionation According to the Chemical Composition	86
2.3.4	Determination of Glass Transition Temperature, Softening Point, Melting Range, and Crystallite Melting Point	87
2.3.4.1	Determination of the Glass Transition Temperature	87
2.3.4.2	Determination of the Softening Point	88
2.3.4.3	Determination of the Melting Range and the Crystallite Melting Point	89
2.3.5	Determination of the Melt Viscosity (Melt Index) of Polymers	91
2.3.6	Determination of the Crystallinity of Polymers	92
2.3.7	Determination of the Density of Polymers	92
2.3.8	Degradation of Polymers	93
2.3.8.1	Thermal Degradation of Polymers	93
2.3.8.2	Chemical Degradation of Polymers	95
2.3.9	Optical Investigations on Polymers	96
2.3.10	Determination of Important Groups and Elements	97
2.3.11	Characterization of Copolymers	97
2.3.12	Mechanical Measurements on Polymers	98
2.3.12.1	Stress-Strain Measurements	100
2.3.12.2	Dynamic-Mechanical Measurements	102
2.3.12.3	Determination of Impact Strength and Notched Impact Strength	104
2.3.12.4	Determination of Hardness	105
2.4	Processing of Polymers	105
2.4.1	Size Reduction of Polymers	106
2.4.2	Melt Processing of Polymers	106
2.4.2.1	Preparation of Polymer Films from the Melt	107

2.4.2.2	Melt-Spinning	107
2.4.3	Processing of Polymers from Solution	108
2.4.3.1	Preparation of Films from Solution	108
2.4.3.2	Solution-Spinning	109
2.4.4	Processing of Aqueous Polymer Dispersions.	109
2.5	References for Chapter 2	110
3	Synthesis of Macromolecular Substances by Addition Polymerization . .	111
3.1	Radical Homopolymerization	112
3.1.1	Polymerization with Peroxo Compounds as Initiators	119
■ Example 3-1	Thermal Polymerization of Styrene in Bulk (Effect of Temperature).	121
■ Example 3-2	Emulsion Polymerization of Styrene with Potassium Peroxodisulfate	121
■ Example 3-3	Bulk Polymerization of Vinyl Acetate with Dibenzoyl Peroxide	122
■ Example 3-4	Polymerization of Vinyl Acetate with Ammonium Peroxodisulfate in Emulsion	122
■ Example 3-5	Polymerization of Acrylonitrile with Ammonium Peroxodisulfate in Organic Solution.	123
■ Example 3-6	Bead Polymerization of Vinyl Acetate	124
■ Example 3-7	Polymerization of Methacrylic Acid with Potassium Peroxodisulfate in Aqueous Solution	124
3.1.2	Polymerization with Azo Compounds as Initiator	125
■ Example 3-8	Bulk Polymerization of Styrene with 2,2'-Azo- bisobutyronitrile (Effect of Initiator Concentration)	126
■ Example 3-9	Bulk Polymerization of Styrene with 2,2'-Azo- bisobutyronitrile in a Dilatometer	126
■ Example 3-10	Polymerization of Styrene with 2,2'-Azobisisobutyronitrile in Solution.	128
■ Example 3-11	Bulk Polymerization of Methyl Methacrylate with 2,2'-Azo- bisobutyronitrile	129
3.1.3	Polymerization with Redox Systems as Initiators	130
■ Example 3-12	Polymerization of Acrylamide with a Redox System in Aqueous Solution.	131
■ Example 3-13	Fractionation of Polyacrylamide by Gel Permeation Chromatography in Water	132
■ Example 3-14	Polymerization of Acrylonitrile with a Redox System in Aqueous Solution (Precipitation Polymerization)	133

■ Example 3-15	Emulsion Polymerization of Isoprene with a Redox System . . .	134
■ Example 3-16	Polymerization of Styrene with Redox Systems in an Organic Solvent.	135
3.1.4	Polymerization Using Photolabile Compounds as Initiators	136
■ Example 3-17	Photopolymerization of Hexamethylene Bisacrylate.	136
3.1.5	Polymerization of Cyclodextrin Host-Guest Complexes in Water	137
■ Example 3-18	Free Radical Polymerization of Cyclodextrin Host-Guest Complexes of Butyl Acrylate from Homogeneous Aqueous Solution (Precipitation Polymerization)	138
3.2	Ionic Homopolymerization.	138
3.2.1	Ionic Polymerization via C=C Bonds	139
3.2.1.1	Cationic Polymerization with Lewis Acids as Initiators.	143
■ Example 3-19	Cationic Polymerization of Isobutylene with Gaseous BF ₃ at Low Temperatures	145
■ Example 3-20	Cationic Polymerization of Isobutyl Vinyl Ether with BF ₃ -Etherate at Low Temperatures	145
■ Example 3-21	Cationic Polymerization of α -Methylstyrene in Solution.	146
3.2.1.2	Anionic Polymerization with Organometallic Compounds as Initiators	147
■ Example 3-22	Anionic Polymerization of α -Methylstyrene with Sodium Naphthalene in Solution ("Living Polymerization").	147
■ Example 3-23	Stereospecific Polymerization of Styrene with Pentylsodium	150
■ Example 3-24	Preparation of Isotactic and Syndiotactic Poly(methyl Methacrylate) with Butyllithium in Solution	152
■ Example 3-25	Stereospecific Polymerization of Isoprene with Butyllithium.	153
3.2.2	Ionic Polymerization via C=O Bonds	156
■ Example 3-26	Anionic Polymerization of Formaldehyde in Solution (Precipitation Polymerization)	157
3.2.3	Ring-Opening Polymerization	158
3.2.3.1	Ring-Opening Polymerization of Cyclic Ethers	158
■ Example 3-27	Bulk Polymerization of THF with Antimony Pentachloride	159
3.2.3.2	Ring-Opening Polymerization of Cyclic Acetals	160
■ Example 3-28	Polymerization of Trioxane with BF ₃ -Etherate as Initiator	162
3.2.3.3	Ring-Opening Polymerization of Cyclic Esters (Lactones)	163
■ Example 3-29	Ring-Opening Polymerization of Dilactide with Cationic Initiators in Solution	164
3.2.3.4	Ring-Opening Polymerization of Cyclic Amides (Lactams)	164
■ Example 3-30	Bulk Polymerization of ϵ -Caprolactam with Anionic Initiators (Flash Polymerization)	166

3.2.3.5	Ring-Opening Polymerization of Oxazolines	166
■	Example 3-31 Synthesis of a Linear, N-Acylated Polyethylenimine Through Cationic Polymerization of an Oxazoline Prepared from Octanoic Acid and 2-Aminoethanol.	167
3.3	Metal Catalyzed Polymerization	168
3.3.1	Polymerization with Ziegler-Natta Catalysts	169
■	Example 3-32 Polymerization of Ethylene with Ziegler-Natta-Catalysts . . .	171
■	Example 3-33 Polymerization of Ethylene on a Supported Catalyst	173
■	Example 3-34 Stereospecific Polymerization of Propylene with Ziegler-Natta-Catalysts	174
■	Example 3-35 Stereospecific Polymerization of Styrene with Ziegler-Natta-Catalysts	175
■	Example 3-36 Stereospecific Polymerization of Butadiene with Ziegler-Natta-Catalysts: Preparation of cis-1,4-Polybutadiene	176
3.3.1.1	Metathesis Polymerization	178
■	Example 3-37 Poly(1-Pentenylene) by Metathesis Polymerization of Cyclopentene with a Ziegler-Natta-Catalyst in Solution . .	179
3.3.2	Polymerization with Metallocene Catalysts	180
■	Example 3-38 Metallocene-Catalyzed Polymerization of Propylene to Highly Isotactic Polypropylene	181
3.4	Copolymerization	182
3.4.1	Random and Alternating Copolymerization	182
■	Example 3-39 Radical Copolymerization of Methacrylic Acid with n-Butyl Acrylate in Emulsion	191
■	Example 3-40 Copolymerization of Styrene with Methyl Methacrylate. . . .	192
■	Example 3-41 Radical Copolymerization of Styrene with 4-Chlorostyrene (Determination of the Reactivity Ratios)	194
■	Example 3-42 Cationic Copolymerization of Styrene with 4-Chlorostyrene (Determination of the Reactivity Ratios)	194
■	Example 3-43 Radical Copolymerization of Styrene with Acrylonitrile (Determination of the Reactivity Ratios)	196
■	Example 3-44 Radical Copolymerization of Styrene with Butadiene in Emulsion	197
■	Example 3-45 Radical Copolymerization of Butadiene with Acrylonitrile in Emulsion	198
■	Example 3-46 Radical Copolymerization of Vinyl Chloride with Vinyl Acetate (Internal Plasticization)	198
■	Example 3-47 Copolymerization of Styrene with Methyl Acrylate (Internal Plasticization)	200
■	Example 3-48 Preparation of a Styrene/Butyl Acrylate Copolymer Dispersion	201

■ Example 3-49	Radical Copolymerization of Styrene with 1,4-Divinylbenzene in Aqueous Suspension (Crosslinking Copolymerization) . . .	202
■ Example 3-50	Cationic Copolymerization of 1,3,5-Trioxane with 1,3-Dioxolane (Ring-Opening Copolymerization)	202
■ Example 3-51	Radical Copolymerization of Styrene with Maleic Anhydride (Alternating Copolymerization)	203
■ Example 3-52	Radical Copolymerization of Cyclohexene with Sulfur Dioxide (Alternating Copolymerization)	203
3.4.2	Block and Graft Copolymerization	204
■ Example 3-53	Preparation of a Block Copolymer of 4-Vinylpyridine and Styrene by Anionic Polymerization	207
■ Example 3-54	Preparation of a Butadiene-Styrene Block Copolymer	208
■ Example 3-55	Graft Copolymerization of Styrene on Polyethylene	209
3.5	References for Chapter 3	210
4	Synthesis of Macromolecular Substances by Condensation Polymerization and Stepwise Addition Polymerization	212
4.1	Condensation Polymerization (Polycondensation)	212
4.1.1	Polyesters	217
4.1.1.1	Polyesters from Hydroxycarboxylic Acids	219
4.1.1.2	Polyesters from Diols and Dicarboxylic Acids	219
■ Example 4-1	Preparation of a Low Molecular Weight Branched Polyester from a Diol and a Dicarboxylic Acid by Melt Condensation . .	219
■ Example 4-2	Preparation of a High Molecular Weight Linear Polyester from a Diol and a Dicarboxylic Acid by Condensation in Solution.	221
4.1.1.3	Polyesters from Diols and Dicarboxylic Acid Derivatives.	222
■ Example 4-3	Preparation of a Polyester from Ethylene Glycol and Dimethyl Terephthalate by Melt Condensation	223
■ Example 4-4	Preparation of a Polycarbonate from 4,4'-Isopropylidene-diphenol (Bisphenol A) and Diphenyl Carbonate by Transesterification in the Melt	223
■ Example 4-5	Preparation of a Thermotropic, Main-Chain Liquid Crystalline (LC) Polymer by Interfacial Polycondensation	225
■ Example 4-6	Preparation of a Liquid Crystalline (LC), Aromatic Main-Chain Polyester by Polycondensation in the Melt	226
■ Example 4-7	Preparation and Crosslinking (Curing) of Unsaturated Polyesters	227
■ Example 4-8	Preparation and Crosslinking (Curing) of Alkyd Resins.	230

4.1.2	Polyamides	232
4.1.2.1	Polyamides from ω -Aminocarboxylic Acids	234
■ Example 4-9	Preparation of an Aliphatic Polyamide by Polycondensation of ϵ -Aminocaproic Acid in the Melt	234
4.1.2.2	Polyamides from Diamines and Dicarboxylic Acids	235
■ Example 4-10	Preparation of Nylon-6,6 from Hexamethylenediammonium Adipate (AH Salt) by Condensation in the Melt.	235
4.1.2.3	Polyamides from Diamines and Dicarboxylic Acid Derivatives	236
■ Example 4-11	Preparation of Polyamide 6,10 from Hexamethylenediamine and Sebacyl Dichloride in Solution and by Interfacial Polycondensation.	237
■ Example 4-12	Microencapsulation of a Dyestuff by Interfacial Polycondensation.	238
■ Example 4-13	Synthesis of a Lyotropic Liquid Crystalline Aromatic Polyamide from Terephthalic Acid Dichloride and Silylated 2-Chloro-1,4-phenylenediamine by Polycondensation in Solution	240
4.1.3	Phenol-Formaldehyde Resins	243
4.1.3.1	Acid-Catalyzed Phenol-Formaldehyde Condensation (Novolaks)	244
■ Example 4-14	Acid-Catalyzed Phenol-Formaldehyde Condensation	245
4.1.3.2	Base-Catalyzed Phenol-Formaldehyde Condensation (Resols)	245
■ Example 4-15	Base-Catalyzed Phenol-Formaldehyde Condensation	246
4.1.4	Urea- and Melamine-Formaldehyde Condensation Products	247
4.1.4.1	Urea-Formaldehyde Resins.	247
■ Example 4-16	Urea-Formaldehyde Condensation	248
4.1.4.2	Melamine-Formaldehyde Resins.	249
■ Example 4-17	Melamine-Formaldehyde Condensation	250
4.1.5	Poly(alkylene Sulfide)s	251
■ Example 4-18	Preparation of a Poly(alkene Sulfide) from 1,2-Dichloroethane and Sodium Tetrasulfide.	252
4.1.6	Poly(arylene Ether)s	253
4.1.6.1	Poly(phenylene Ether)s	254
■ Example 4-19	Preparation of Poly(2,6-dimethylphenylene Ether).	255
4.1.6.2	Aromatic Polysulfides [Poly(arylene Sulfide)s]	256
4.1.6.3	Poly(arylene Ether Sulfone)s.	257
■ Example 4-20	Synthesis of Poly(arylene Ether Sulfone) from Bisphenol A and 4,4'-Dichlorodiphenyl Sulfone	258

4.1.6.4	Poly(arylene Ether Ketone)s	259
■ Example 4-21	Preparation of a Substituted Poly(ether Ether Ketone) from 4,4-Bis(4-hydroxyphenyl)pentanoic Acid and 4,4'-Difluorobenzophenone	260
4.1.7	Polymers with Heterocyclic Rings in the Main Chain.	261
4.1.7.1	Polyimides	262
■ Example 4-22	Preparation of a Polyimide from Pyromellitic Dianhydride and 4,4'-Oxydianiline by Polycyclocondensation.	263
4.1.7.2	Poly(benzimidazole)s	263
4.1.8	Polysiloxanes	264
■ Example 4-23	Ring-Opening Polymerization of a Cyclic Oligosiloxane to a Linear, High Molecular Weight Polysiloxane with Hydroxy End Groups; Curing of the Polymer.	266
■ Example 4-24	Equilibration of a Silicone Elastomer to a Silicone Oil with Trimethylsilyl End Groups	267
4.2	Stepwise Addition Polymerizations	268
4.2.1	Polyurethanes	268
4.2.1.1	Linear Polyurethanes	269
■ Example 4-25	Preparation of a Linear Polyurethane from 1,4-Butanediol and Hexamethylene Diisocyanate in the Melt	270
■ Example 4-26	Preparation of a Linear Polyurethane from 1,4-Butanediol and Hexamethylene Diisocyanate in Solution	271
4.2.1.2	Branched and Crosslinked Polyurethanes	271
4.2.2	Epoxy Resins	273
■ Example 4-27	Preparation of Epoxy Resins from Bisphenol A and Epichlorohydrin	275
4.3	References for Chapter 4	277
5	Modification of Macromolecular Substances	279
5.1	Chemical Conversion of Macromolecular Substances	279
■ Example 5-1	Poly(vinyl Alcohol) by Transesterification of Poly(vinyl acetate); Reacetylation of Poly(vinyl Alcohol)	287
■ Example 5-2	Preparation of Poly(vinylbutyral)	288
■ Example 5-3	Saponification of a Copolymer of Styrene and Maleic Anhydride	289
■ Example 5-4	Preparation of Linear Poly(ethylenimine) by Saponification of Polyoxazoline	289
■ Example 5-5	Acetylation of Cellulose	290
■ Example 5-6	Preparation of Trimethylcellulose	291

■ Example 5-7	Preparation of Sodium Carboxymethylcellulose	292
■ Example 5-8	Esterification of Cellulose with <i>p</i> -Toluenesulfonyl Chloride	292
■ Example 5-9	Acetylation of the Semi-Acetal End Groups of Poly(oxymethylene) with Acetic Anhydride	293
5.2	Crosslinking of Macromolecular Substances.	294
■ Example 5-10	Crosslinking of Chlorinated Nylon-6,6 by Irradiation.	295
■ Example 5-11	Vulcanization of a Butadiene-Styrene Copolymer (SBR)	297
■ Example 5-12	Preparation of a Cation Exchanger by Sulfonation of Crosslinked Polystyrene	300
■ Example 5-13	Preparation of a Cation Exchanger by Sulfonation of a Phenol-Formaldehyde Condensation Polymer	301
■ Example 5-14	Preparation of an Anion Exchanger from Crosslinked Polystyrene by Chloromethylation and Amination.	301
5.3	Degradation of Macromolecular Substances.	302
■ Example 5-15	Thermal Depolymerization of Poly(α -methylstyrene) and of Poly(methyl Methacrylate).	305
■ Example 5-16	Thermal Depolymerization of Poly(oxymethylene)	305
■ Example 5-17	Oxidative Degradation of Poly(vinyl Alcohol) with Periodic Acid	306
■ Example 5-18	Hydrolytic Degradation of an Aliphatic Polyester	307
■ Example 5-19	Hydrolytic Degradation of Cellulose and Separation of the Hydrolysis Products by Chromatography	308
5.4	Modification of Polymers by Additives	308
5.4.1	Addition of Stabilizers	309
■ Example 5-20	Suppression of the Thermo-Oxidative Crosslinking of Polyisoprene by Addition of an Antioxidant	310
■ Example 5-21	Suppression of the Thermal Dehydrochlorination of Poly(vinyl Chloride) by Addition of Stabilizers	311
5.4.2	Addition of Plasticizers	312
■ Example 5-22	Polymerization of Styrene in Presence of Paraffin Oil (External Plasticization)	313
5.4.3	Addition of Fillers and Reinforcing Materials	313
■ Example 5-23	Preparation of a Composite Material from an Unsaturated Polyester Resin and Glass Fibers	314
5.5	Mixtures of Polymers (Polymer Blends)	314
5.5.1	Properties of Polymer Blends	316
5.5.2	Preparation of Polymer Blends	317
5.5.2.1	Concerted Precipitation from Solution	317
■ Example 5-24	Preparation of Polymer Blends from Solution	318

5.5.2.2	Coprecipitation of Polymer Latices	320
5.5.2.3	Mixing of Polymer Melts	320
■	Example 5-25 Preparation of Polymer Blends from the Melt.	320
5.5.2.4	Polymerization of Monomers Containing Other Dissolved Polymers	321
5.6	Stretching and Foaming of Polymers	322
■	Example 5-26 Preparation of Foamable Polystyrene and of Polystyrene Foam.	323
■	Example 5-27 Preparation of a Urea/Formaldehyde Foam.	325
5.6.1	Preparation of Polyurethane Foams.	326
■	Example 5-28 Preparation of a Flexible Polyurethane Foam.	327
■	Example 5-29 Preparation of a Rigid Polyurethane Foam	327
5.7	References for Chapter 5	327
	Subject Index	329
