Chapter 1	<i>Why Is Econometrics Necessary?</i>	1
1.1	Economics and the Role of the Economic Model	3
1.1.1	Expressing the Relationship	4
1.1.2	What is the Direction of the Relationship?	5
1.2	The Statistical Model and Sample Information	6
1.3	Statistical Inference	8
1.4	A Format for Learning From Economic Data	9
1.5	Organization of the Book	10
1.6	A Suggestion for Further Reading	12
Part I	<i>The Foundations of Estimation and Inference</i>	13
Chapter 2	<i>Some Basic Ideas: Statistical Concepts for Economists</i>	15
2.1	Where Do Economic Data Come From: The Differences Between Experimental and Nonexperimental Data	15
2.1.1	Experimental Data	15
2.1.2	Nonexperimental Data	17
2.2	Sampling, Variability, and Randomness	18
2.3	Types of Economic Variables	20
2.3.1	Discrete and Continuous Variables	20
2.3.2	Univariate, Bivariate, and Multivariate Variables	21
2.3.3	Summarizing the Characteristics of Economic Data	22
2.4	A Description of the Data-Generation Process	26
2.4.1	Continuous and Discrete Random Variables and Their Values	28
2.4.2	The Probability Distribution of a Single Random Variable	28
2.4.3	Using Joint Probability Density Functions To Make Probability Statements Involving Several Random Variables	31
2.4.4	Independent Random Variables	32
2.4.5	Obtaining Probability Density Functions for Individual Random Variables From Joint Probability Density Functions	33
2.4.6	Conditional Probabilities and Conditional Probability Density Functions	35
2.5	The Expected Value of a Random Variable: The Mean	36
2.6	The Expected Value of a Function of a Random Variable: The Variance	38
2.6.1	Some Properties of Mathematical Expectation	39
2.6.2	The Variance of a Random Variable	40
2.7	The Expected Value of a Function of Several Random Variables: Covariance and Correlation	42
2.7.1	The Mean of a Weighted Sum of Random Variables	46
2.7.2	The Variance of a Weighted Sum of Random Variables	47

2.8	Examples of Probability Density Functions	48
2.8.1	The Normal Distribution	48
2.8.2	The Central Limit Theorem	51
2.8.3	The Bivariate Normal Distribution	52
2.9	Summary	55
2.10	Exercises	58
2.11	References	60
Appendix 2A Summation Operations		63
2A.1	The Notation	63
2A.2	Some Summation Rules	63
2A.3	Some Additional Notation	65
2A.4	Multiple Summation	65
Appendix 2B The Geometry of Integration		66
Chapter 3 <i>Statistical Inference I: Estimating the Mean and Variance of a Population</i>		72
3.1	Introduction	72
3.2	An Economic and Statistical Model for the Mean of a Population	74
3.2.1	The Economic Model	74
3.2.2	The Statistical Model	74
3.3	Estimating the Mean of a Normal Population	77
3.4	Discussion of the Estimation Rule	80
3.4.1	The Mean of b	81
3.4.2	The Variance of b	82
3.4.3	The Probability (Sampling) Distribution of b in Repeated Samples	82
3.4.4	Best Linear Unbiased Estimation	85
3.5	Estimating the Variance of a Normal Population	88
3.5.1	The Chi-Square Probability Distribution	89
3.5.2	The Probability Distribution of $\tilde{\sigma}^2$	89
3.5.3	Another Way to Obtain Estimators	92
3.6	A Sampling Experiment	94
3.7	Some Other Examples	97
3.7.1	Rational Expectations	98
3.7.2	Sales of Canned Tuna	99
3.8	A Summary and Critique	100
3.9	Exercises	103
3.10	References	107
Appendix 3A The Derivative: Geometry and Interpretation		108
3A.1	The First Derivative of a Function	108
3A.2	Rules for Calculating Derivatives	111
3A.3	Second Derivatives	112
3A.4	Maxima and Minima	113
Appendix 3B Representing the Sampling Process Using a New Notation		114
3B.1	Model Specification Using Vectors	115
3B.2	Rules for Vector Addition and Scalar Multiplication	116
3B.3	Model Specification Using Vectors (Continued)	117

3B.4	The Expectation of a Vector	117
3B.5	Matrix Definitions: Equality, Sums, Scalar Multiplication, Transpose and Multiplication	118
3B.6	Model Assumptions Using Vectors and Matrices	120
3B.7	The Least Squares Estimator of β in Vector Notation	122
3B.8	The Estimator of σ^2 in Vector Notation	123
3B.9	Matrix Exercises	124
Chapter 4 <i>Statistical Inference II: Interval Estimation and Hypothesis Tests for the Mean of a Normal Population</i>		127
4.1	Introduction	127
4.2	An Interval Estimator for the Mean of a Normal Population: Known σ^2	128
4.2.1	Predicting the Value of a Normal Random Variable	131
4.3	Hypothesis Tests About the Mean of a Normal Population When the Population Variance, σ^2 , Is Known	133
4.3.1	Types of Decision Errors and p -Values	136
4.3.2	One-Tailed Tests	139
4.4	Statistical Inference About the Mean of a Normal Population When the Variance Is Unknown: The t -Distribution	141
4.4.1	The t -Distribution	141
4.4.2	Interval Estimation	143
4.4.3	Hypothesis Testing	144
4.5	A Sampling Experiment	145
4.5.1	Sampling Properties of Interval Estimators	145
4.5.2	Sampling Properties of Hypothesis Tests	146
4.6	Other Examples	147
4.6.1	Rational Expectations	147
4.6.2	Sales of Canned Tuna	147
4.6.3	A Two-Sample Problem	148
4.7	A Summary	151
4.8	Exercises	153
4.9	References	156
Appendix to Part I <i>Review-Summary of Chapters 2 to 4</i>		157
Chapter 2		157
Chapter 3		162
Chapter 4		164
Part II <i>The Simple Linear Statistical Model</i>		169
Chapter 5 <i>Simple Regression: Economic and Statistical Model Specification and Estimation</i>		171
5.1	The Economic Model	172
5.2	The Statistical Model and Data	175
5.2.1	Introducing the Error Term	175
5.2.2	Introducing Observations	176
5.2.3	The Sampling Process	177
5.2.4	An Example of an “Artificial” Sampling Process	180
5.2.5	A Sample of Economic Data	181

5.3	Estimating the Parameters for the Expenditure Relationship	182
5.3.1	The Least Squares Estimation Rule	183
5.3.2	Estimates for the Household Expenditure Function	186
5.3.3	A Discussion of the Estimation Rule	188
5.3.4	The Maximum-Likelihood Estimation Rule	189
5.3.5	Other Economic–Statistical Models	189
5.3.6	What Have We Learned?	190
5.4	A Restatement of the Results Using a Shorthand-Linear Algebra Notation	191
5.4.1	The Statistical Model	194
5.4.2	The Least Squares Estimator	195
5.4.3	Estimates of β_1 and β_2	196
5.5	Exercises	200
5.6	References	201
	Appendix 5A Elasticities	201
	Appendix 5B Partial Derivations and the Minimum or Maximum of a Multivariate Function	202
5B.1	Partial Derivatives	202
5B.2	The Minimum (and Maximum) of a Multivariate Function	204
	Appendix 5C The Inverse of a Matrix	205
	Chapter 6 Inference in the Simple Regression Model: Estimator Sampling Characteristics and Properties	208
6.1	The Least Squares Estimators as Random Variables	209
6.2	Sampling Properties of the Least Squares Rule for Estimating β	210
6.2.1	Means of b_1 and b_2	211
6.2.2	Variances and Covariances for b_1 and b_2	211
6.2.3	The Least Squares Variances and Covariance for the Household Expenditure Relationship	215
6.2.4	A Review	216
6.3	Estimating the Variance Parameter σ^2	217
6.3.1	A Feasible Unbiased Estimator of σ^2	217
6.4	An Estimate of the Variances of b_1 and b_2 and the Covariance (b_1, b_2)	218
6.5	A Monte Carlo Experiment to Demonstrate the Sampling Performance of the Least Squares Estimator	219
6.5.1	The Sampling Results	221
6.6	Some Basic Derivations	223
6.6.1	Mean of \mathbf{b}	224
6.6.2	Covariance Matrix for \mathbf{b}	224
6.6.3	How Good Is the Least Squares Rule?	227
6.6.4	Estimating σ^2	227
6.6.5	A Maximum Likelihood Estimator of σ^2	228
6.6.6	Summary	229
6.7	Exercises	229
6.8	Reference	232

Chapter 7	<i>Inference in the Simple Regression Model: Interval Estimation, Hypothesis Testing, and Prediction</i>	233
7.1	Interval Estimation	234
7.1.1	σ^2 known	235
7.1.2	Unknown σ^2	236
7.1.3	Some Monte Carlo Results	238
7.2	Hypothesis Testing	238
7.2.1	A More General Null Hypothesis	239
7.3	Predicting Expenditure	240
7.3.1	The Predictor	241
7.3.2	Sampling Properties	241
7.3.3	An Application	242
7.3.4	Interval Prediction	243
7.3.5	Hypothesis Testing with a New Observation	244
7.3.6	Conditional Mean Forecasting	244
7.3.7	Section Summary	245
7.4	Summary of Chapter	245
7.5	Exercises	246
7.6	References	248
Appendix 7A	Linear Algebra Specifications and Derivations in Prediction	249
7A.1	Sampling Properties	249
Chapter 8	<i>The Simple Linear Statistical Model: Choosing the Functional Form, Reporting Results, and Carrying Through an Econometric Analysis</i>	251
8.1	Explaining Variation in the Dependent Variable	251
8.2	Reporting–Summarizing Results	254
8.2.1	Computer Output	255
8.3	Questions Relative to the Algebraic Form of the Household Expenditure–Income Relationship	256
8.4	Analysis of Another Estimation and Inference Problem	261
8.4.1	Economic Model for Aggregate Consumption	262
8.4.2	Statistical Model and Data	262
8.4.3	Estimation and Inference	264
8.5	Other Economic–Statistical Models	267
8.6	Critique of Concepts in Part II	270
8.7	Exercises	271
8.8	References	274
Appendix 8A	The Derivative Revisited	274
8A.1	Functional Form and Elasticity	278
Appendix to Part II	<i>Review-Summary of Chapters 5 to 8</i>	280
Part III	<i>General Linear Statistical Model</i>	285
Chapter 9	<i>A General Linear Statistical Model: Model Specification and Estimation</i>	287

9.1	Model Specification and the Data	288
9.1.1	The Economic Model	288
9.1.2	The Statistical Model	290
9.2	Estimation	295
9.2.1	Least Squares Estimation of the Coefficient Vector β	296
9.2.2	Estimation of the Error Variance σ^2	299
9.2.3	Sampling Properties of the Least Squares Estimator	301
9.2.4	Coefficient of Determination	303
9.3	Reporting–Summarizing Results	304
9.4	Summary of New Concepts	305
9.5	Statistical Implications of Misspecifying the Set of Regressors	307
9.5.1	Economic Model	307
9.5.2	Representing Competing Statistical Models	308
9.5.3	Bias and Sampling Variability of the Least Squares Estimator Under Model Misspecification	308
9.5.4	A Sampling Experiment	310
9.6	Exercises	313
9.7	References	320
Chapter 10 Inference in the General Linear Statistical Model		321
10.1	Sampling Properties of the Least Squares Estimator	322
10.2	Interval Estimation	325
10.3	One-Sided Hypothesis Testing for a Single Coefficient	326
10.4	Testing a Zero Null Hypothesis for a Single Coefficient	328
10.4.1	Testing Significance and Selecting Regressors	329
10.5	Inference and the Reporting of Results	330
10.6	Testing a Zero Null Hypothesis for All Response Coefficients	331
10.6.1	The Analysis of Variance Table	334
10.6.2	Using t - and F -Tests for Zero Coefficients	334
10.7	Testing a Single Linear Combination of Coefficients	336
10.7.1	An Extended Model	336
10.7.2	Estimating the Extended Model	337
10.7.3	Testing the Optimality of Advertising Expenditure	339
10.8	Testing More Than One Linear Combination of Coefficients	341
10.9	Selecting Regressor Variables and Model Misspecification	341
10.10	Choice of Functional Form	344
10.10.1	Testing a Linear Versus a Log-Linear Model	345
10.11	Summary and Critique	347
10.12	Exercises	348
10.13	References	355
Appendix 10A Partial Derivatives Revisited		355
10A.1	The Least Squares Rule	355
10A.2	Elasticities	356
10A.3	Maxima and Minima	359
Appendix 10B The F Random Variable		360
Appendix 10C Testing General Linear Hypotheses		363
10C.1	The t -Test	363
10C.2	The F -Test	365

10C.2a	Testing a Zero Null Hypothesis for All Response Coefficients	366
10C.2b	Testing Two Hypotheses Concerning Price and Advertising Expenditure	367
10C.2c	The Relationship Between the t - and F -Tests	368
10C.2d	Looking Ahead	368
Chapter 11	<i>Combining Sample and Nonsample Information and Further Applications of the General Linear Statistical Model</i>	369
11.1	An Economic Model and Nonsample Information	370
11.2	Statistical Model and Estimation with Sample Information	371
11.2.1	Estimation with Sample Information	372
11.3	Estimation with Sample and Nonsample Information	373
11.4	A Comparison of Restricted and Unrestricted Least Squares	375
11.5	Testing the Restriction from the Nonsample Information	377
11.5.1	The t -Test	377
11.5.2	The F -Test	378
11.6	Restricted Estimation and Hypothesis Testing With More Than One Restriction	379
11.6.1	Restricted Estimation	379
11.6.2	Testing the Restrictions	381
11.6.3	The Analysis of Variance Test Revisited	382
11.6.4	A Summary Statement	383
11.7	Prediction	383
11.8	An Econometric Application Using Experimental Data	384
11.8.1	Economic Model and Data Generation	385
11.8.2	Estimating the Unknown Parameters of the Production Function	387
11.8.3	An Economic Analysis of the Estimated Production Function	390
11.9	Critique of the Knowledge Search and Concepts	394
11.10	Exercises	395
11.11	References	402
Appendix 11A	<i>The Restricted Least Squares Estimator for Combining Sample and Nonsample Information</i>	403
11A.1	The Two Formulations of the F -Statistic	406
Part IV	<i>Econometric Topics I</i>	409
Chapter 12	<i>Dummy Variables and Varying Coefficient Models</i>	411
12.1	Introduction	411
12.2	Varying Intercept Parameters: Dummy Variables	411
12.3	Varying Response Parameters and Dummy Variables	414
12.4	Extending the Use of Dummy Variables	415
12.5	The Dummy Variable Trap and Model Interpretation	417
12.6	Testing the Significance of Qualitative Characteristics	419
12.6.1	An Example	421
12.7	Systematically Varying Parameter Models	421
12.8	Summary	425

12.9	Exercises	425
12.10	References	430
Chapter 13 Collinear Economic Variables		431
13.1	The Economic Setting	431
13.2	The Nature of Collinear Data	433
13.3	The Statistical Model	434
13.4	The Statistical Consequences of Collinearity	435
13.5	Identifying Multicollinearity	435
13.6	Possible Solutions for Collinear Data	437
	13.6.1 Using Nonsample Information	437
13.7	Collinearity Summary	439
13.8	Exercises	439
13.9	References	444
Chapter 14 Large Sample Theory and Models with Random Regressors		445
14.1	Consistency and Probability Limits	447
	14.1.1 Consistency, Random Regressors and the Least Squares Estimator	448
14.2	Random Regressor Models	451
14.3	Large Sample Probability Distributions	453
	14.3.1 An Example	455
	14.3.2 Large Sample Efficiency and Maximum Likelihood Estimation	456
	14.3.3 Method of Moments Estimators	457
14.4	Unobservables, Measurement Error, and Instrumental Variable Estimation	458
	14.4.1 Statistical Consequences of Errors in Variables	459
	14.4.2 Instrumental Variable Estimation	460
	14.4.3 Testing for Correlation Between a Regressor and the Error	462
	14.4.4 An Example	463
14.5	Summary	465
14.6	Exercises	466
14.7	References	469
Appendix 14A Consistency, Random Regressors and Instrumental Variable Estimation in the General Linear Statistical Model		471
14A.1	Consistency in the General Random Regressor Model	471
14A.2	Instrumental Variable Estimation in the General Random Regressor Model	472
14A.3	A More General Instrumental Variables Estimator	473
14A.4	Hausman's Specification Test	475
Part V Linear Statistical Models with a General Error Covariance Matrix		477
V.1	Nonscalar Identity Error Covariance	477
V.2	Properties of Least Squares Under Heteroskedastic or Autocorrelated Errors	480

Chapter 15 <i>Heteroskedastic Errors</i>	483
15.1 Heteroskedastic Errors in an Expenditure Function	483
15.1.1 The Economic Model	483
15.1.2 The Statistical Model	484
15.1.3 Estimation	487
15.2 A Sample with a Heteroskedastic Partition	490
15.2.1 Economic and Statistical Model	490
15.2.2 Separate Least Squares Estimation of Each Partition	493
15.2.3 Testing for Heteroskedasticity	494
15.2.4 Generalized Least Squares Through Model Transformation	496
15.2.5 What If the Error Variances Are Assumed Equal?	499
15.3 Summary of Results on Heteroskedastic Error Models	500
15.4 Generalized Least Squares	501
15.4.1 GLS Estimation of the Expenditure Function: Further Details	503
15.4.2 GLS Estimation of the Wheat Supply Function: Further Details	505
15.4.3 A Summary	507
15.5 Exercises	507
15.6 References	513
Chapter 16 <i>An Autocorrelated Error Model</i>	514
16.1 An Economic Model and Data	515
16.2 Statistical Model	517
16.2.1 A First-Order Autoregressive Process	517
16.2.2 Statistical Properties of an AR(1) Error	518
16.2.3 The Reformulated Statistical Model	520
16.2.4 Properties of the Least Squares Rule Under Autocorrelation	521
16.3 Generalized Least Squares Estimation of an Autocorrelated Error Model	521
16.3.1 The Transformed Model	521
16.3.2 The Generalized Least Squares Estimator	523
16.3.3 An Estimated Generalized Least Squares Estimator	524
16.3.4 The Sugar Cane Example	525
16.4 Other Estimators for an AR(1) Error Model	528
16.5 Testing for Autocorrelated Errors	530
16.5.1 A Test Statistic	530
16.5.2 The Test Mechanism	531
16.5.3 The Bounds Test	532
16.5.4 The Example	533
16.5.5 Testing for Negatively Correlated Errors	533
16.6 Forecasting in the AR(1) Correlated Error Model	534
16.6.1 An Example	536
16.7 Summary of Results on Autocorrelated Error Models	536
16.8 Exercises	538
16.9 References	540
Chapter 17 <i>Estimating the Parameters of a Set of Error Related Economic Relations</i>	542
17.1 Firm Investment Relations	543
17.1.1 The Economic Model	543
17.1.2 The Statistical Model	544
17.1.3 The Least Squares Estimation Rule for Each Equation	545

17.2	A New Statistical Model	546
17.2.1	A General Statistical Model	548
17.2.2	A Seemingly Unrelated Regressions (SUR) Statistical Model and Estimator	550
17.2.3	Do the Investment Relations Have a Common Coefficient Vector?	554
17.2.4	Critique of Models, Estimators, and Results	556
17.3	An Example Involving a Set of Demand Equations	557
17.3.1	The Statistical Model	557
17.3.2	Estimation	559
17.3.3	Testing for Contemporaneous Correlation	561
17.3.4	An Aggregation Test	561
17.4	Combining Time-Series and Cross-Sectional Data	562
17.5	Statistical Implications of Using Sets of Regression Equations	562
17.6	Exercises	563
17.7	A Guide to Further Reading	568
Appendix 17A A General SUR Formulation		569
17A.1	Estimation with a Known and Unknown Covariance Matrix	569
17A.2	Hypothesis Testing	570
17A.2a	Testing for Contemporaneous Correlation	570
17A.2b	Linear Restrictions on the Coefficients	570
Appendix 17B Combining Cross-Sectional and Time-Series Data		571
17B.1	A Dummy Variable Model	574
17B.2	Error Components	576
17B.2a	Estimation	577
17B.3	An Example	578
Part VI Specifying and Estimating Economic and Statistical Models with Feedback Mechanisms		580
VI.1	Examples of Endogenous Economic Variables	580
VI.1.1	A Demand and Supply Model	580
VI.1.2	An Aggregate Economic Model	583
Chapter 18 An Introduction to Simultaneous Equation Econometric Models		585
18.1	A Macroeconometric Model	585
18.1.1	The Economic Model	585
18.1.2	The Statistical Model	586
18.1.3	Estimating the Marginal Propensity to Consume	586
18.1.4	Respecifying the Statistical Model	589
18.1.5	Estimation of the Reduced Form Parameters	590
18.1.6	An Indirect Least Squares Estimator	591
18.1.7	Some Empirical Estimates	592
18.1.8	Summary	594

18.2	Specifying and Estimating Models Involving Equilibrium Prices and Quantities	595
18.2.1	An Economic Model	595
18.2.2	The Statistical Model	596
18.2.3	Estimation	602
18.2.4	Exogenous and Predetermined Variables	602
18.3	Identification	603
18.3.1	Observationally Equivalent Relations	603
18.3.2	Counting Rules (Order Conditions) for Identification	605
18.3.3	Summary	605
18.4	Why Are We Interested in Estimating the Parameters of the Structural Equations?	607
18.5	Summary of Chapter	608
18.6	Exercises	609
18.7	References	612
Chapter 19 <i>Estimation and Inference for the Simultaneous Equations Model</i>		613
19.1	Estimation in Just- and Overidentified Equations	613
19.1.1	A Two-Stage Least Squares (2SLS) Estimator	614
19.2	Estimation of the Parameters in a Demand and Supply Model	617
19.2.1	A Sample of Data	617
19.2.2	Parameter Estimates	619
19.3	Another Look at Estimating the Structural Parameters in the Aggregate Macro Model	619
19.4	Another Method for Estimating the Unknown Parameters of an Overidentified Equation	620
19.4.1	Another Estimator for a Just-Identified Equation	622
19.4.2	A “More Efficient” Estimation Rule	623
19.5	Forecasting with an Econometric Model	623
19.5.1	A Static Model	624
19.5.2	Relaxing the Static Assumption	625
19.6	Exercises	626
19.7	References	628
Appendix 19A A More Efficient Estimator?		629
19A.1	The Statistical Model	629
Appendix 19B An Application of a Simultaneous Equations Model		632
19B.1	The Economic Model	632
19B.2	The Statistical Model	633
19B.3	Some Empirical Results	634
Part VII <i>Time-Series and Dynamic Economic Models</i>		637
Chapter 20 <i>Univariate Time-Series Analysis and Forecasting</i>		639
20.1	Introduction	639

20.2	The Characteristics of Univariate Time-Series Statistical Models	640
20.3	Statistical Models for Autoregressive Processes	642
20.3.1	Statistical Properties of First-Order Autoregressive Models	643
20.3.2	Properties of Second-Order Autoregressive Processes	646
20.3.3	Estimation of $AR(p)$ Processes	648
20.3.4	Partial Autocorrelations	651
20.3.5	Another Representation of a Stationary $AR(p)$ Time Series	653
20.4	Moving Average Processes	654
20.4.1	Properties of the $MA(1)$ Process	655
20.4.2	Properties of the $MA(2)$ Process	657
20.4.3	The Sample Autocorrelation Function	659
20.4.4	Estimation of the Parameters of an $MA(q)$ Process	660
20.4.5	Another Way to Represent the $MA(q)$ Process	660
20.5	Autoregressive-Moving Average Models	661
20.5.1	Properties of ARMA Processes	662
20.6	Autoregressive Integrated Moving Average Processes	664
20.7	The Box–Jenkins Approach to Time-Series Model Building	666
20.7.1	Identification	666
20.7.2	Estimation	668
20.7.3	Diagnostic Checking	668
20.7.4	An Example	668
20.8	Forecasting with Time-Series Models	670
20.8.1	Computing the Forecast, Forecast Error and Forecast Error Variance	671
20.8.2	Forecast Confidence Intervals	674
20.8.3	An Example	675
20.9	Summary and Guide to Further Reading	675
20.10	Exercises	677
20.11	References	678
	Chapter 21 <i>Bivariate and Multivariate Time-Series Models</i>	680
21.1	Introduction	680
21.2	The Finite Distributed Lag Model: The Almon Polynomial Distributed Lag	681
21.2.1	An Economic Model	681
21.2.2	The Statistical Model	682
21.2.3	Polynomial Distributed Lags	683
21.3	Infinite Distributed Lags	687
21.3.1	A Geometric Lag Statistical Model	688
21.3.2	The Koyck Transformation: A Moving Average Error Formulation of the Geometric Lag	690
21.3.3	Estimation of the Geometric Lag–Adaptive Expectations Statistical Model	690
21.4	Vector Autoregressive (VAR) Models	692
21.4.1	An Economic Example	692
21.4.2	VAR(p) Model Assumptions	693
21.4.3	Estimation of VAR Models	694
21.4.4	Estimation Results	694
21.4.5	Granger Causality	695

21.5	Spurious Regressions, Unit Root Tests, and Cointegration	696
21.5.1	Spurious Regressions	696
21.5.2	Unit Root Tests	697
21.5.3	Cointegration	700
21.6	Summary	702
21.7	Exercises	704
21.8	References	706
Part VIII <i>Econometric Topics II</i>		709
Chapter 22 <i>Nonlinear Least Squares</i>		711
22.1	Nonlinear Models	711
22.2	Principles of Nonlinear Least Squares Estimation	713
22.2.1	Finding the Least Squares Estimate Numerically	716
22.2.2	Properties of the Nonlinear Least Squares Estimator	718
22.2.3	Summary and Extensions	720
22.3	The CES Production Function	721
22.3.1	Properties of the Cobb–Douglas Production Function	721
22.3.2	Properties of the CES Production Function	722
22.3.3	Statistical Model and Data	723
22.3.4	Estimation of the CES Production Function	724
22.4	Summary	726
22.5	Exercises	726
22.6	References	730
Appendix 22A <i>Estimation of Moving Average Models</i>		732
22A.1	A Moving Average Process	732
22.A.1.1	Some Empirical Results	732
22A.2	Nonlinear Least Squares Estimation of the Geometric Lag Model	734
Chapter 23 <i>Models with Discrete Dependent Variables</i>		736
23.1	The Economic Model	736
23.2	The Statistical Model	737
23.3	The Linear Probability Model	738
23.4	The Probit Statistical Model for Discrete Choice	740
23.4.1	Interpreting the Probit Model	741
23.4.2	A Summary Statement	743
23.4.3	Estimation of the Unknown Parameters of Probit Models	744
23.4.4	Properties of the Maximum Likelihood Estimators for the Probit Model	746
23.5	Hypothesis Tests in the Probit Model	747
23.5.1	Testing the Significance of Individual Parameters	748
23.5.2	Tests of General Hypotheses	749
23.6	The Logit Model	751
23.7	Examples of Alternative Economic Models for Which the Probit and Logit Models May Be Useful	752
23.8	Summary	753
23.9	Exercises	754
23.10	References	755

Appendix 23A A Statistical Model of Choice	757
23A.1 Modeling Choice Probabilities	758
23A.1a A Random Utility Model	758
23A.1b The Probit Statistical Model	758
23A.2 The Logit Statistical Model	760
Part IX Bayesian Estimation and Inference	761
Chapter 24 <i>The Bayesian Approach to Estimation and Inference: Some Basic Definitions, Concepts, and Applications</i>	763
24.1 Expressing Uncertainty About Mean Expenditure	765
24.1.1 Postsample Information	766
24.1.2 Updating Prior Information	768
24.1.3 Probability Statements for Mean Expenditure	769
24.1.4 Interval Estimation	769
24.1.5 Comparing Hypotheses	771
24.1.6 A Summary	772
24.2 Point Estimation	772
24.3 Accumulating Information	775
24.3.1 Including Prior Information	775
24.3.2 A Summary	779
24.4 Bayesian Inference for a Second Problem	780
24.4.1 Prior Information	781
24.4.2 Updating the Prior Information	782
24.4.3 Interval Estimation	783
24.4.4 Hypothesis Testing	784
24.4.5 Prediction	784
24.4.6 Unknown Variance	785
24.5 Critique of Concepts	785
24.6 Exercises	787
24.7 References	788
Appendix 24A Bayes' Rule	788
24A.1 Bayes' Rule for Discrete Events	788
24A.2 Bayes' Rule for Continuous Distributions: Known Variance	790
24A.2a Noninformative Prior	791
24A.2b An Informative Prior	793
24A.3 Bayes' Rule for Continuous Distributions: Unknown Variance	794
Chapter 25 <i>The Bayesian Approach to Using Sample and Nonsample Information in the Estimation of Relationships Between Economic Variables</i>	706
25.1 Economic Model for Aggregate Consumption	797
25.2 Statistical Model and Data	798
25.3 Estimation and Inference Based on Sampling Theory Procedures	798
25.3.1 Statistical Model and Estimates	799
25.3.2 Interpreting the Sampling Theory Results	800
25.4 Expressing Uncertainty About the Consumption Function Parameters: Known Variance and No Prior Information	801

25.4.1	Summarizing Information from the Postsample Density Functions	805
25.5	Including Prior Information on the Consumption Function Parameters	806
25.5.1	Prior Information on the Marginal Propensity to Consume	807
25.5.2	Postsample Density Function for β_2	807
25.5.3	How is Information on β_1 and β_2 Related?	814
25.5.4	Including Prior Information on Both Parameters	816
25.5.5	Prediction	818
25.6	Summary and Critique of Concepts	822
25.7	Exercises	823
25.8	References	826

Part X *Economic Data Sources and the Writing Task* **827**

Chapter 26 *Economic Data Sources, Guidelines for Choosing a Research Project, and the Writing of a Research Report* **829**

26.1	Economic Data Samples	829
26.1.1	Passively Generated Data	830
26.1.2	Data from Surveys	833
26.1.3	Controlled Experimental Data	834
26.1.4	Some Characteristics of Economic Data	835
26.2	Some Guidelines for Choosing a Class Research Topic	836
26.2.1	Choosing a Topic	836
26.2.2	Writing a Research Abstract	837
26.3	A Format for Writing a Research Report	837
26.3.1	Writing up the Research Results	838
26.3.2	Research Ingredients for a Particular Problem	839
26.4	Some Concluding Remarks	841
26.5	Exercises	841
26.6	References	842

Statistical Tables **843**
