

CONTENTS

Series Editor's Introduction	v
1. Introduction	1
Definition	3
Independence	4
Decomposition	5
Structure	6
Stationarity	7
Time Series Tests and Model Building	8
2. Testing for Stationarity	10
Transformations	10
Random Walk	12
Dickey-Fuller Test	13
Augmented Dickey-Fuller Test	16
3. Testing for Normality	19
Normal Distribution Test	19
Jarque-Bera Test	20
Studentized Range Test	23
4. Testing for Independence	24
Ljung-Box and Box-Pierce Test	25
Turning Point Test	27
Runs Test	28
Rank Version of the von Neumann Ratio Test	31
Brock, Dechert, and Scheinkman Test	32
5. Testing for Linear or Nonlinear Dependence	37
Keenan Test	37
Luukkonen Test	41
McLeod-Li Test	43
Hsieh Test	45

6. Linear Model Specification	49
Autoregressive Models	49
Moving-Average Models	50
Autoregressive Moving-Average Models	51
Order of Integration	51
7. Nonlinear Model Specification	53
Autoregressive Conditional Heteroscedastic Models	54
Bilinear Models	57
Threshold Autoregressive Models	58
Exponential Autoregressive Models	59
8. Testing for Model Order	60
Likelihood Ratio Test	61
Final Prediction Error Test	63
Autoregressive Transfer Function Test	65
Akaike Information Criterion Test	66
Bayesian Information Criterion Test	66
Bayesian Estimation Method Test	67
Schwarz Test	67
Hannan-Quinn Criterion Test	67
9. Testing the Residual Process	70
Specification Test	70
ARCH Test	73
Bilinear Test	74
10. Computational Methods for Performing the Tests	76
Appendix: Statistical Tables	79
A.1 Critical Values for Dickey-Fuller Test Statistics	79
B.1 Areas under the Standard Normal Distribution	80
B.2 Percentage Points of the t Distribution	81
B.3 Upper Percentage Points of the F Distribution	82
B.4 Upper Percentage Points of the χ^2 Distribution	88
References	90
About the Authors	95
