Preface xi
Acknowledgments xv

PART 1: Background

1. What Does It Mean to Model Hypothesized Causal Processes With Nonexperimental Data? 3
   Methods for Structural Equation Analyses 9
   Overview 12

2. History and Logic of Structural Equation Modeling 15
   History 15
   Sewell Wright 15
   Path Analysis in the Social Sciences 17
   Unidirectional Flow Models 17
   Moving Beyond Path Analysis in Structural Equation Modeling Research 20
   Why Use Structural Equation Modeling Techniques? 20
# PART 2: Basic Approaches to Modeling With Single Observed Measures of Theoretical Variables

3. The Basics: Path Analysis and Partitioning of Variance  
   - Logic of Correlations and Covariances  30
   - Decomposing Relationships Between Variables  
     - Into Causal and Noncausal Components  35
     - Direct Causal Effects  39
     - Indirect Causal Effects  40
     - Noncausal Relationships Due to Shared Antecedents  41
     - Noncausal Unanalyzed Prior Association Relationships  42
   - Approaches for Decomposing Effects  44
   - Determining Degrees of Freedom of Models  48
   - Presenting Partial Regression and Partial  
     - Correlation as Path Models  49
     - Partial Regression  49
     - Partial Correlation  51
   - Peer Popularity and Academic Achievement:  
     - An Illustration  53

4. Effects of Collinearity on Regression and Path Analysis  60
   - Regression and Collinearity  62
   - Illustrating Effects of Collinearity  66
   - Confidence Intervals for Correlations  70
   - Ridge or Reduced Variance Regression  73

5. Effects of Random and Nonrandom Error on Path Models  79
   - Measurement Error  79
     - Background  79
     - Specifying Relationships Between Theoretical Variables and Measures  81
     - Random Measurement Error  84
     - Nonrandom Error  87
   - Method Variance and Multitrait-Multimethod Models  88
     - Method Variance  89
     - Additive Multitrait-Multimethod Models  92
     - Nonadditive Multitrait-Multimethod Models  96
### 6. Recursive and Longitudinal Models: Where Causality Goes in More Than One Direction and Where Data Are Collected Over Time

#### Models With Multidirectional Paths
- **Logic of Nonrecursive Models**
- **Estimation of Nonrecursive Models**

#### Longitudinal Models
- **Logic Underlying Longitudinal Models**
- **Terminology of Panel Models**
- **Identification**
- **Stability**
- **Temporal Lags in Panel Models**
- **Growth Across Time in Panel Models**
- **Stability of Causal Processes**
- **Effects of Excluded Variables**

#### Correlation and Regression Approaches for Analyzing Panel Data

#### Summary

---

### PART 3: Factor Analysis and Path Modeling

7. Introducing the Logic of Factor Analysis and Multiple Indicators to Path Modeling

#### Factor Analysis
- **Logic of Factor Analysis**
- **Exploratory Factor Analysis**
- **Confirmatory Factor Analysis**
- **Use of Confirmatory Factor Analysis Techniques**

#### Constraining Relations of Observed Measures With Factors

#### Confirmatory Factor Analysis and Method Factors
- **The Basic Confirmatory Factor Analysis Path Model for Multitrait-Multimethod Matrices**
- **Confirmatory Factor Analysis Approaches to Multitrait-Multimethod Matrices and Model Identification**
### PART 4: Latent Variable Structural Equation Models

8. Putting It All Together: Latent Variable Structural Equation Modeling
   - The Basic Latent Variable Structural Equation Model
     - The Measurement Model
     - Reference Indicators
     - The Structural Model
   - An Illustration of Structural Equation Models
     - Model Specification
     - Identification
     - Equations and Matrices
   - Basic Ideas Underlying Fit/Significance Testing
     - Individual Parameter Significance
     - Model Fitting
     - The Measurement Model
     - The Structural Model
     - The Variance/Covariance Matrices

   - Example 1: A Longitudinal Path Model
   - Example 2: A Nonrecursive Multiple-Indicator Model
   - Example 3: A Longitudinal Multiple-Indicator Panel Model

10. Logic of Alternative Models and Significance Tests
   - Nested Models
   - Tests of Overall Model Fit
     - Absolute Indexes
     - Relative Indexes
     - Adjusted Indexes
   - Fit Indexes for Comparing Non-Nested Models
