

<b>PREFACE</b>	<b>xv</b>
<b>1 INTRODUCTION</b>	<b>1</b>
1.1 Four Important Practical Problems 2	
1.1.1 <i>Forecasting Time Series, 2</i>	
1.1.2 <i>Estimation of Transfer Functions, 3</i>	
1.1.3 <i>Analysis of Effects of Unusual Intervention Events To a System, 4</i>	
1.1.4 <i>Discrete Control Systems, 5</i>	
1.2 Stochastic and Deterministic Dynamic Mathematical Models 7	
1.2.1 <i>Stationary and Nonstationary Stochastic Models for Forecasting and Control, 7</i>	
1.2.2 <i>Transfer Function Models, 12</i>	
1.2.3 <i>Models for Discrete Control Systems, 14</i>	
1.3 Basic Ideas in Model Building 16	
1.3.1 <i>Parsimony, 16</i>	
1.3.2 <i>Iterative Stages in the Selection of a Model, 16</i>	
<b>Part I Stochastic Models and Their Forecasting</b>	<b>19</b>
<b>2 AUTOCORRELATION FUNCTION AND SPECTRUM OF STATIONARY PROCESSES</b>	<b>21</b>
2.1 Autocorrelation Properties of Stationary Models 21	
2.1.1 <i>Time Series and Stochastic Processes, 21</i>	
2.1.2 <i>Stationary Stochastic Processes, 23</i>	
2.1.3 <i>Positive Definiteness and the Autocovariance Matrix, 26</i>	
2.1.4 <i>Autocovariance and Autocorrelation Functions, 29</i>	
2.1.5 <i>Estimation of Autocovariance and Autocorrelation Functions, 30</i>	
2.1.6 <i>Standard Error of Autocorrelation Estimates, 32</i>	
2.2 Spectral Properties of Stationary Models 35	
2.2.1 <i>Periodogram of a Time Series, 35</i>	
2.2.2 <i>Analysis of Variance, 36</i>	

- 2.2.3 *Spectrum and Spectral Density Function, 37*
- 2.2.4 *Simple Examples of Autocorrelation and Spectral Density Functions, 41*
- 2.2.5 *Advantages and Disadvantages of the Autocorrelation and Spectral Density Functions, 43*
- A2.1 **Link Between the Sample Spectrum and Autocovariance Function Estimate 44**

### **3 LINEAR STATIONARY MODELS**

46

- 3.1 **General Linear Process 46**
  - 3.1.1 *Two Equivalent Forms for the Linear Process, 46*
  - 3.1.2 *Autocovariance Generating Function of a Linear Process, 49*
  - 3.1.3 *Stationarity and Invertibility Conditions for a Linear Process, 50*
  - 3.1.4 *Autoregressive and Moving Average Processes, 52*
- 3.2 **Autoregressive Processes 54**
  - 3.2.1 *Stationarity Conditions for Autoregressive Processes, 54*
  - 3.2.2 *Autocorrelation Function and Spectrum of Autoregressive Processes, 55*
  - 3.2.3 *First-Order Autoregressive (Markov) Process, 58*
  - 3.2.4 *Second-Order Autoregressive Process, 60*
  - 3.2.5 *Partial Autocorrelation Function, 64*
  - 3.2.6 *Estimation of the Partial Autocorrelation Function, 67*
  - 3.2.7 *Standard Errors of Partial Autocorrelation Estimates, 68*
- 3.3 **Moving Average Processes 69**
  - 3.3.1 *Invertibility Conditions for Moving Average Processes, 69*
  - 3.3.2 *Autocorrelation Function and Spectrum of Moving Average Processes, 70*
  - 3.3.3 *First-Order Moving Average Process, 72*
  - 3.3.4 *Second-Order Moving Average Process, 73*
  - 3.3.5 *Duality Between Autoregressive and Moving Average Processes, 75*
- 3.4 **Mixed Autoregressive–Moving Average Processes 77**
  - 3.4.1 *Stationarity and Invertibility Properties, 77*
  - 3.4.2 *Autocorrelation Function and Spectrum of Mixed Processes, 78*
  - 3.4.3 *First-Order Autoregressive–First-Order Moving Average Process, 80*
  - 3.4.4 *Summary, 83*

- A3.1 Autocovariances, Autocovariance Generating Function, and Stationarity Conditions for a General Linear Process 85
- A3.2 Recursive Method for Calculating Estimates of Autoregressive Parameters 87

## 4 LINEAR NONSTATIONARY MODELS

89

- 4.1 Autoregressive Integrated Moving Average Processes 89
  - 4.1.1 *Nonstationary First-Order Autoregressive Process*, 89
  - 4.1.2 *General Model for a Nonstationary Process Exhibiting Homogeneity*, 92
  - 4.1.3 *General Form of the Autoregressive Integrated Moving Average Process*, 96
- 4.2 Three Explicit Forms for the Autoregressive Integrated Moving Average Model 99
  - 4.2.1 *Difference Equation Form of the Model*, 99
  - 4.2.2 *Random Shock Form of the Model*, 100
  - 4.2.3 *Inverted Form of the Model*, 106
- 4.3 Integrated Moving Average Processes 109
  - 4.3.1 *Integrated Moving Average Process of Order (0, 1, 1)*, 110
  - 4.3.2 *Integrated Moving Average Process of Order (0, 2, 2)*, 114
  - 4.3.3 *General Integrated Moving Average Process of Order (0, d, q)*, 118
- A4.1 Linear Difference Equations 120
- A4.2 IMA(0, 1, 1) Process With Deterministic Drift 125
- A4.3 ARIMA Processes With Added Noise 126
  - A4.3.1 *Sum of Two Independent Moving Average Processes*, 126
  - A4.3.2 *Effect of Added Noise on the General Model*, 127
  - A4.3.3 *Example for an IMA(0, 1, 1) Process with Added White Noise*, 128
  - A4.3.4 *Relation Between the IMA(0, 1, 1) Process and a Random Walk*, 129
  - A4.3.5 *Autocovariance Function of the General Model with Added Correlated Noise*, 129

## 5 FORECASTING

131

- 5.1 Minimum Mean Square Error Forecasts and Their Properties 131

- 5.1.1 *Derivation of the Minimum Mean Square Error Forecasts, 133*
- 5.1.2 *Three Basic Forms for the Forecast, 135*
- 5.2 **Calculating and Updating Forecasts 139**
  - 5.2.1 *Convenient Format for the Forecasts, 139*
  - 5.2.2 *Calculation of the  $\psi$  Weights, 139*
  - 5.2.3 *Use of the  $\psi$  Weights in Updating the Forecasts, 141*
  - 5.2.4 *Calculation of the Probability Limits of the Forecasts at Any Lead Time, 142*
- 5.3 **Forecast Function and Forecast Weights 145**
  - 5.3.1 *Eventual Forecast Function Determined by the Autoregressive Operator, 146*
  - 5.3.2 *Role of the Moving Average Operator in Fixing the Initial Values, 147*
  - 5.3.3 *Lead  $l$  Forecast Weights, 148*
- 5.4 **Examples of Forecast Functions and Their Updating 151**
  - 5.4.1 *Forecasting an IMA(0, 1, 1) Process, 151*
  - 5.4.2 *Forecasting an IMA(0, 2, 2) Process, 154*
  - 5.4.3 *Forecasting a General IMA(0,  $d$ ,  $q$ ) Process, 156*
  - 5.4.4 *Forecasting Autoregressive Processes, 157*
  - 5.4.5 *Forecasting a (1, 0, 1) Process, 160*
  - 5.4.6 *Forecasting a (1, 1, 1) Process, 162*
- 5.5 **Use of State Space Model Formulation for Exact Forecasting 163**
  - 5.5.1 *State Space Model Representation for the ARIMA Process, 163*
  - 5.5.2 *Kalman Filtering Relations for Use in Prediction, 164*
- 5.6 **Summary 166**
- A5.1 **Correlations Between Forecast Errors 169**
  - A5.1.1 *Autocorrelation Function of Forecast Errors at Different Origins, 169*
  - A5.1.2 *Correlation Between Forecast Errors at the Same Origin with Different Lead Times, 170*
- A5.2 **Forecast Weights for Any Lead Time 172**
- A5.3 **Forecasting in Terms of the General Integrated Form 174**
  - A5.3.1 *General Method of Obtaining the Integrated Form, 174*
  - A5.3.2 *Updating the General Integrated Form, 176*
  - A5.3.3 *Comparison with the Discounted Least Squares Method, 176*

<b>Part II Stochastic Model Building</b>	<b>181</b>
<b>6 MODEL IDENTIFICATION</b>	<b>183</b>
6.1 Objectives of Identification	183
6.1.1 <i>Stages in the Identification Procedure</i>	<i>184</i>
6.2 Identification Techniques	184
6.2.1 <i>Use of the Autocorrelation and Partial Autocorrelation Functions in Identification</i>	<i>184</i>
6.2.2 <i>Standard Errors for Estimated Autocorrelations and Partial Autocorrelations</i>	<i>188</i>
6.2.3 <i>Identification of Some Actual Time Series</i>	<i>188</i>
6.2.4 <i>Some Additional Model Identification Tools</i>	<i>197</i>
6.3 Initial Estimates for the Parameters	202
6.3.1 <i>Uniqueness of Estimates Obtained from the Autocovariance Function</i>	<i>202</i>
6.3.2 <i>Initial Estimates for Moving Average Processes</i>	<i>202</i>
6.3.3 <i>Initial Estimates for Autoregressive Processes</i>	<i>204</i>
6.3.4 <i>Initial Estimates for Mixed Autoregressive–Moving Average Processes</i>	<i>206</i>
6.3.5 <i>Choice Between Stationary and Nonstationary Models in Doubtful Cases</i>	<i>207</i>
6.3.6 <i>More Formal Tests for Unit Roots in ARIMA Models</i>	<i>208</i>
6.3.7 <i>Initial Estimate of Residual Variance</i>	<i>211</i>
6.3.8 <i>Approximate Standard Error for <math>\bar{w}</math></i>	<i>212</i>
6.4 Model Multiplicity	214
6.4.1 <i>Multiplicity of Autoregressive–Moving Average Models</i>	<i>214</i>
6.4.2 <i>Multiple Moment Solutions for Moving Average Parameters</i>	<i>216</i>
6.4.3 <i>Use of the Backward Process to Determine Starting Values</i>	<i>218</i>
A6.1 Expected Behavior of the Estimated Autocorrelation Function for a Nonstationary Process	218
A6.2 General Method for Obtaining Initial Estimates of the Parameters of a Mixed Autoregressive–Moving Average Process	220
<b>7 MODEL ESTIMATION</b>	<b>224</b>
7.1 Study of the Likelihood and Sum of Squares Functions	224

- 7.1.1 *Likelihood Function*, 224
- 7.1.2 *Conditional Likelihood for an ARIMA Process*, 226
- 7.1.3 *Choice of Starting Values for Conditional Calculation*, 227
- 7.1.4 *Unconditional Likelihood; Sum of Squares Function; Least Squares Estimates*, 228
- 7.1.5 *General Procedure for Calculating the Unconditional Sum of Squares*, 233
- 7.1.6 *Graphical Study of the Sum of Squares Function*, 238
- 7.1.7 *Description of "Well-Behaved" Estimation Situations; Confidence Regions*, 241
- 7.2 **Nonlinear Estimation** 248
  - 7.2.1 *General Method of Approach*, 248
  - 7.2.2 *Numerical Estimates of the Derivatives*, 249
  - 7.2.3 *Direct Evaluation of the Derivatives*, 251
  - 7.2.4 *General Least Squares Algorithm for the Conditional Model*, 252
  - 7.2.5 *Summary of Models Fitted to Series A to F*, 255
  - 7.2.6 *Large-Sample Information Matrices and Covariance Estimates*, 256
- 7.3 **Some Estimation Results for Specific Models** 259
  - 7.3.1 *Autoregressive Processes*, 260
  - 7.3.2 *Moving Average Processes*, 262
  - 7.3.3 *Mixed Processes*, 262
  - 7.3.4 *Separation of Linear and Nonlinear Components in Estimation*, 263
  - 7.3.5 *Parameter Redundancy*, 264
- 7.4 **Estimation Using Bayes' Theorem** 267
  - 7.4.1 *Bayes' Theorem*, 267
  - 7.4.2 *Bayesian Estimation of Parameters*, 269
  - 7.4.3 *Autoregressive Processes*, 270
  - 7.4.4 *Moving Average Processes*, 272
  - 7.4.5 *Mixed processes*, 274
- 7.5 **Likelihood Function Based on The State Space Model** 275
- A7.1 **Review of Normal Distribution Theory** 279
  - A7.1.1 *Partitioning of a Positive-Definite Quadratic Form*, 279
  - A7.1.2 *Two Useful Integrals*, 280
  - A7.1.3 *Normal Distribution*, 281
  - A7.1.4 *Student's t-Distribution*, 283
- A7.2 **Review of Linear Least Squares Theory** 286
  - A7.2.1 *Normal Equations*, 286
  - A7.2.2 *Estimation of Residual Variance*, 287
  - A7.2.3 *Covariance Matrix of Estimates*, 288

- A7.2.4 *Confidence Regions, 288*
- A7.2.5 *Correlated Errors, 288*
- A7.3 Exact Likelihood Function for Moving Average and Mixed Processes 289
- A7.4 Exact Likelihood Function for an Autoregressive Process 296
- A7.5 Examples of the Effect of Parameter Estimation Errors on Probability Limits for Forecasts 304
- A7.6 Special Note on Estimation of Moving Average Parameters 307

## **8 MODEL DIAGNOSTIC CHECKING**

308

- 8.1 Checking the Stochastic Model 308
  - 8.1.1 *General Philosophy, 308*
  - 8.1.2 *Overfitting, 309*
- 8.2 Diagnostic Checks Applied to Residuals 312
  - 8.2.1 *Autocorrelation Check, 312*
  - 8.2.2 *Portmanteau Lack-of-Fit Test, 314*
  - 8.2.3 *Model Inadequacy Arising from Changes in Parameter Values, 317*
  - 8.2.4 *Score Tests for Model Checking, 318*
  - 8.2.5 *Cumulative Periodogram Check, 321*
- 8.3 Use of Residuals to Modify the Model 324
  - 8.3.1 *Nature of the Correlations in the Residuals When an Incorrect Model Is Used, 324*
  - 8.3.2 *Use of Residuals to Modify the Model, 325*

## **9 SEASONAL MODELS**

327

- 9.1 Parsimonious Models for Seasonal Time Series 327
  - 9.1.1 *Fitting versus Forecasting, 328*
  - 9.1.2 *Seasonal Models Involving Adaptive Sines and Cosines, 329*
  - 9.1.3 *General Multiplicative Seasonal Model, 330*
- 9.2 Representation of the Airline Data by a Multiplicative  $(0, 1, 1) \times (0, 1, 1)_{12}$  Seasonal Model 333
  - 9.2.1 *Multiplicative  $(0, 1, 1) \times (0, 1, 1)_{12}$  Model, 333*
  - 9.2.2 *Forecasting, 334*
  - 9.2.3 *Identification, 341*
  - 9.2.4 *Estimation, 344*
  - 9.2.5 *Diagnostic Checking, 349*
- 9.3 Some Aspects of More General Seasonal Models 351
  - 9.3.1 *Multiplicative and Nonmultiplicative Models, 351*

9.3.2	<i>Identification, 353</i>	
9.3.3	<i>Estimation, 355</i>	
9.3.4	<i>Eventual Forecast Functions for Various Seasonal Models, 355</i>	
9.3.5	<i>Choice of Transformation, 358</i>	
9.4	<b>Structural Component Models and Deterministic Seasonal Components</b>	<b>359</b>
9.4.1	<i>Deterministic Seasonal and Trend Components and Common Factors, 360</i>	
9.4.2	<i>Models with Regression Terms and Time Series Error Terms, 361</i>	
A9.1	<b>Autocovariances for Some Seasonal Models</b>	<b>366</b>
<b>Part III Transfer Function Model Building</b>		<b>371</b>
<b>10 TRANSFER FUNCTION MODELS</b>		<b>373</b>
10.1	<b>Linear Transfer Function Models</b>	<b>373</b>
10.1.1	<i>Discrete Transfer Function, 374</i>	
10.1.2	<i>Continuous Dynamic Models Represented by Differential Equations, 376</i>	
10.2	<b>Discrete Dynamic Models Represented by Difference Equations</b>	<b>381</b>
10.2.1	<i>General Form of the Difference Equation, 381</i>	
10.2.2	<i>Nature of the Transfer Function, 383</i>	
10.2.3	<i>First- and Second-Order Discrete Transfer Function Models, 384</i>	
10.2.4	<i>Recursive Computation of Output for Any Input, 390</i>	
10.2.5	<i>Transfer Function Models with Added Noise, 392</i>	
10.3	<b>Relation Between Discrete and Continuous Models</b>	<b>392</b>
10.3.1	<i>Response to a Pulsed Input, 393</i>	
10.3.2	<i>Relationships for First- and Second-Order Coincident Systems, 395</i>	
10.3.3	<i>Approximating General Continuous Models by Discrete Models, 398</i>	
A10.1	<b>Continuous Models With Pulsed Inputs</b>	<b>399</b>
A10.2	<b>Nonlinear Transfer Functions and Linearization</b>	<b>404</b>
<b>11 IDENTIFICATION, FITTING, AND CHECKING OF TRANSFER FUNCTION MODELS</b>		<b>407</b>
11.1	<b>Cross Correlation Function</b>	<b>408</b>
11.1.1	<i>Properties of the Cross Covariance and Cross Correlation Functions, 408</i>	

- 11.1.2 *Estimation of the Cross Covariance and Cross Correlation Functions, 411*
- 11.1.3 *Approximate Standard Errors of Cross Correlation Estimates, 413*
- 11.2 Identification of Transfer Function Models 415
  - 11.2.1 *Identification of Transfer Function Models by Prewhitening the Input, 417*
  - 11.2.2 *Example of the Identification of a Transfer Function Model, 419*
  - 11.2.3 *Identification of the Noise Model, 422*
  - 11.2.4 *Some General Considerations in Identifying Transfer Function Models, 424*
- 11.3 Fitting and Checking Transfer Function Models 426
  - 11.3.1 *Conditional Sum of Squares Function, 426*
  - 11.3.2 *Nonlinear Estimation, 429*
  - 11.3.3 *Use of Residuals for Diagnostic Checking, 431*
  - 11.3.4 *Specific Checks Applied to the Residuals, 432*
- 11.4 Some Examples of Fitting and Checking Transfer Function Models 435
  - 11.4.1 *Fitting and Checking of the Gas Furnace Model, 435*
  - 11.4.2 *Simulated Example with Two Inputs, 441*
- 11.5 Forecasting Using Leading Indicators 444
  - 11.5.1 *Minimum Mean Square Error Forecast, 444*
  - 11.5.2 *Forecast of CO<sub>2</sub> Output from Gas Furnace, 448*
  - 11.5.3 *Forecast of Nonstationary Sales Data Using a Leading Indicator, 451*
- 11.6 Some Aspects of the Design of Experiments to Estimate Transfer Functions 453
- A11.1 Use of Cross Spectral Analysis for Transfer Function Model Identification 455
  - A11.1.1 *Identification of Single Input Transfer Function Models, 455*
  - A11.1.2 *Identification of Multiple Input Transfer Function Models, 456*
- A11.2 Choice of Input to Provide Optimal Parameter Estimates 457
  - A11.2.1 *Design of Optimal Inputs for a Simple System, 457*
  - A11.2.2 *Numerical Example, 460*

## **12 INTERVENTION ANALYSIS MODELS AND OUTLIER DETECTION**

- 12.1 Intervention Analysis Methods 462
  - 12.1.1 *Models for Intervention Analysis, 462*

- 12.1.2 *Example of Intervention Analysis, 465*
- 12.1.3 *Nature of the MLE for a Simple Level Change Parameter Model, 466*
- 12.2 **Outlier Analysis for Time Series 469**
  - 12.2.1 *Models for Additive and Innovational Outliers, 469*
  - 12.2.2 *Estimation of Outlier Effect for Known Timing of the Outlier, 470*
  - 12.2.3 *Iterative Procedure for Outlier Detection, 471*
  - 12.2.4 *Examples of Analysis of Outliers, 473*
- 12.3 **Estimation for ARMA Models With Missing Values 474**

## **Part IV Design of Discrete Control Schemes 481**

### **13 ASPECTS OF PROCESS CONTROL 483**

- 13.1 **Process Monitoring and Process Adjustment 484**
  - 13.1.1 *Process Monitoring, 484*
  - 13.1.2 *Process Adjustment, 487*
- 13.2 **Process Adjustment Using Feedback Control 488**
  - 13.2.1 *Feedback Adjustment Chart, 489*
  - 13.2.2 *Modeling the Feedback Loop, 492*
  - 13.2.3 *Simple Models for Disturbances and Dynamics, 493*
  - 13.2.4 *General Minimum Mean Square Error Feedback Control Schemes, 497*
  - 13.2.5 *Manual Adjustment for Discrete Proportional–Integral Schemes, 499*
  - 13.2.6 *Complementary Roles of Monitoring and Adjustment, 503*
- 13.3 **Excessive Adjustment Sometimes Required by MMSE Control 505**
  - 13.3.1 *Constrained Control, 506*
- 13.4 **Minimum Cost Control With Fixed Costs of Adjustment And Monitoring 508**
  - 13.4.1 *Bounded Adjustment Scheme for Fixed Adjustment Cost, 508*
  - 13.4.2 *Indirect Approach for Obtaining a Bounded Adjustment Scheme, 510*
  - 13.4.3 *Inclusion of the Cost of Monitoring, 511*
- 13.5 **Monitoring Values of Parameters of Forecasting and Feedback Adjustment Schemes 514**
- A13.1 **Feedback Control Schemes Where the Adjustment Variance Is Restricted 516**
  - A13.1.1 *Derivation of Optimal Adjustment, 517*
