<i>Preface</i>	<i>xiii</i>
1. The Development of Long-Wave Research	1
Introduction	1
The development of long-wave research in the pre-war period	5
Post-war developments	43
The present state of the controversy	49
Taking a stand	51
Notes	53
2. The Methodology of Kondratieff and Schumpeter	58
Kondratieff's main categories: series with and series without a trend	58
Schumpeter's 'result trends'	65
The smoothing of time series	70
The impossibility of Schumpeter's 'result trend'	74
Some concluding remarks	77
Notes	78
3. Post-war Long-Wave Methodology	80
Introduction	80
The 'binary split' method	81
The problem of the trend	83
The problem of identification and measurement	96
Conclusion	116
Notes	116
4. Perspectivistic Distortion	120
Introduction	120

A second look at the long-run approach	126
Perspectivistic distortion	135
Systematic long-run movements	141
Notes	148
5. How to Cope with Perspectivistic Distortion	150
Putting things together	150
The selection of time series	152
Fitting a 'standard trend'	154
The selection of models	162
Notes	180
6. Putting Kondratieff into Proper Perspective	182
Introduction	182
Derivation of the model structure	183
Derivation of empirical properties	188
Standardization of the time series from all intervals	200
Conclusion	210
Appendix 6.1 Estimates of 'standard trends' and 'full trends' of the data from the 285-, 155- and 130-year intervals	211
Notes	216
7. Putting Kondratieff to the Test: Spectral Analysis	218
Introduction	218
Spectral analysis	219
Results of the spectral analytic test compared with the fruits of a similar study by van Ewijk	236
Conclusion	239
Notes	244
<i>Appendix 1: A Note on Growth Rate Transformation</i>	246
<i>Appendix 2: A Note on the Kuznets Cycle</i>	253
<i>Appendix 3: A Note on Sources</i>	265
<i>Appendix 4: References</i>	270
<i>Name index</i>	285
<i>Subject index</i>	289

Figures

2.1	The 'three-cycle schema'	68
3.1	The effect of fitting a convex curve to a concave trend	95
3.2	P_t and v_t for $\phi_t = 0.5\pi$	98
3.3	Function $f(\tilde{g}_t)$ for: $-\pi < \tau < \pi$	100
3.4	Illustration of an 'alias effect' on two-point measurement	109
3.5	Minor and major cycle brought together so as to create the illusion of a long wave	114
4.1	Illustration of perspectivistic distortion	137
4.2	Wholesale prices United Kingdom 1700–1985 (relative deviations from the 'standard trend')	142
4.3	Industrial production (excluding building) United Kingdom 1700–1985 (relative deviations from the 'standard trend')	143
5.1	Deviations from a log linear trend. Miscellaneous series 1700–1985	158
5.2	Approximation of the 'systematic long-run movement' in industrial production 1700–1985 by means of a 6-th degree polynomial	167
5.3	Approximation of the 'systematic long-run movement' in industrial production 1700–1985 by four harmonics of the Fourier transform	172
5.4	'Hidden periodicities' approximation of the 'systematic long-run movement' in industrial production	177
6.1	Log of the industrial production index, its 'full trend' and the implied 'standard trend'	193
6.2	Illustration of the location of joint confidence regions of the amplitude proportions and phase differences of various series	198
6.3	Illustration of the 'location effect' in the GNP series 1830–1985	204

7.1	Spectrum Phelps Brown and Hopkins (frequency 1-100)	225
7.2	Standardized residuals of public expenditure compared with fixed capital formation	231
7.3	Spectra of GNP series. Standardized residuals versus growth rate transforms	238
7.4	'Anatomy' of the standardization procedure	241
A1.1	'Bastard cycle' resulting from growth rate transformation of a sine function	247
A1.2	'Bastard cycle' resulting from growth rate transformation of function (A.3)	249
A1.3	Fourier transforms of a sine and a sawtooth function	250
A2.1	Comparison of the distribution of interval length with the distribution of cycle duration in Kuznets (1967)	260
A2.2	Time series consisting of a logistic trend and a 50-year cycle	260
A2.3	Comparison of the resulting 'secondary secular movements' for differing interval lengths with the true cyclical movement	261

Tables

2.1	Trend specifications in Kondratieff (1926; 1928; 1984)	62
2.2	Trend reversals within the definition interval	64
4.1	Fricky's summary table – measurements of average length of 'cycle' for pig-iron production	128
5.1	Growth rates of standard trends and the timing and amplitude of systematic long-run movements of individual series 1700–1985	157
5.2	Specification of the parameters of a 6-th degree polynomial approximation of the 'systematic long-run movement'	167
5.3	Polynomial model: coherency spectra of relative deviations from the standard trend with (A) its approximate and (B) the residual after the elimination of the approximate	168
5.4	Parameters of a three component 'hidden periodicities' model fitted to the deviations from the standard trend	177
5.5	'Hidden periodicities' model: coherency spectra of relative deviations from the standard trend with (A) its approximation and (B) the residual after eliminating the approximation	178
6.1	Results of the fitting of the three-component non-linear model to the Phelps Brown index 1264–1954	190
6.2	Results of the fitting of the three-component fixed periodicities model to the long series	191
	(a) Industrial production 1700–1985	
	(b) Prices 1700–1985	
	(c) Imports 1700–1985	
	(d) Exports 1700–1985	
	(e) Population 1700–1985	

6.3	Amplitude and phase characteristics of the periodic components: 690- and 285-year intervals	194
6.4	Estimates of amplitude proportions and phase differences between periodical components of the indicators: 690- and 285-year intervals	197
6.5	(a) Test of approximate uniformity. Results of the application of Wald's test	199
	(b) Strict uniformity	199
6.6	'Standard' growth rates (per cent) 1700-1985	203
6.7	Miscellaneous series 1700-1985	211
	(a) Industrial production 1700-1985	
	(b) Wholesale prices 1700-1985	
	(c) Volume of imports 1700-1985	
	(d) Volume of exports 1700-1985	
	(e) Population 1700-1985	
6.8	Expenditure and gross national product	212
	(a) Consumers' expenditure 1830-1985	
	(b) Public current expenditure on goods and services 1830-1985	
	(c) Gross fixed domestic capital formation 1830-1985	
	(d) Gross national production at factor cost 1830-1985	
6.9	Output of various sectors and gross domestic product 1855-1985	213
	(a) Output agriculture forestry and fishing 1855-1985	
	(b) Industrial output (including construction) 1855-1985	
	(c) Output trade and communication 1855-1985	
	(d) Output distribution and other services 1855-1985	
	(e) Gross domestic product at factor cost 1855-1985	
6.10	Working population, employment and unemployment 1855-1985	214
	(a) Working population 1855-1985	
	(b) Working population 1855-1985 standardized according to the population parameters	

	(c) Total employment 1855–1985	
	(d) Total in civil employment 1855–1985	
	(e) Total unemployment 1855–1985	
	(f) Percentage unemployed 1855–1985	
7.1	Test of mean stationarity of the standardized residual	222
7.2	(a) Distribution of peaks in the spectrum of the Phelps Brown and Hopkins series 1264–1954	225
	(b) Distribution of peaks in the spectrum of the truncated Phelps Brown and Hopkins series	227
7.3	Distribution of peaks in the spectra of miscellaneous series 1700–1985	228
7.4	(a) Distribution of peaks in the spectra of the main categories of expenditure and gross national product	230
	(b) Distribution of peaks in the spectra of the main categories of expenditure and gross national product with periods of war replaced by linear interpolations	232
7.5	Distribution of peaks in the spectra of the output of various sectors and gross domestic product	233
7.6	Distribution of peaks in the spectra of the working population, employment and unemployment	235
