

# CONTENTS

Preface and Acknowledgements	xi
<b>PART I: ECONOMY AND ENVIRONMENT</b>	
<b>Chapter 1 The Historical Development of Environmental Economics</b>	<b>3</b>
1.1 Introduction	3
1.2 Early Economic Paradigms and the Environment	4
1.3 Post-War Economics and the Rise of Environmentalism	12
1.4 Institutional Economics Paradigm	15
1.5 The Market Model of Environmental Management	16
1.6 Policy Analysis: Fixed Standard versus Cost-Benefit Framework	20
1.7 Economic and Environmental Values	21
1.8 Sustainable Economic Growth and Development	23
1.9 Ecological and Co-evolutionary Economic Paradigm	25
1.10 Conclusions	26
<b>Chapter 2 The Circular Economy</b>	<b>29</b>
2.1 Narrow and Holistic Views of Economies and Environments	29
2.2 The Environment-Economy Interaction	31
2.3 The Circular Economy	35
2.4 Existence Theorems	41
<b>Chapter 3 The Sustainable Economy</b>	<b>43</b>
3.1 Rules for Sustaining Closed Economies	43
3.2 Complementarity and Trade-Offs	44
3.3 Maintaining the Natural Capital Stock	48
3.4 The Meaning of Constant Capital Stock	52
3.5 Existing and Optimal Capital Stocks	53

## PART II: THE ECONOMICS OF POLLUTION

<b>Chapter 4 The Optimal Level of Pollution</b>	61
4.1 Pollution as Externality	61
4.2 Optimal Externality	62
4.3 Alternative Definitions of Pollution	64
4.4 Types of Externality	66
4.5 Who are the Polluters?	67
4.6 Conclusions	67
Appendix 4.1 Deriving a Marginal Net Private Benefit Curve	69
<b>Chapter 5 The Market Achievement of Optimal Pollution</b>	70
5.1 Property Rights	70
5.2 The Potential for Market Bargains in Externality	71
5.3 Criticisms of the Coase Theorem	73
Appendix 5.1 Resurrecting the Coase Theorem under Imperfect Competition	78
Appendix 5.2 Non-Convexity and the Market Bargain Theorem	79
<b>Chapter 6 Taxation and Optimal Pollution</b>	84
6.1 Introduction	84
6.2 The Optimal Pigovian Tax	85
6.3 Illustrating the Optimal Pigovian Tax Mathematically	86
6.4 Pollution Charges and Property Rights	87
6.5 Pollution Charges and Abatement Costs	88
6.6 A Formal Proof that $MAC = MEC$ Produces Optimal Pollution	91
6.7 Pigovian Taxes and Imperfect Competition	91
6.8 Charges as a Low-Cost Solution to Standard Setting	94
6.9 Why are Pollution Taxes not Widespread?	96
Appendix 6.1 The Emissions–Damage Sequence for an Electricity Power Station	100
Appendix 6.2 The Target of a Pigovian Tax	100
<b>Chapter 7 Environmental Standards, Taxes and Subsidies</b>	102
7.1 The Inefficiency of Standard-Setting	102
7.2 Taxes versus Standards	104
7.3 Pollution Reduction Subsidies	107

<b>Chapter 8 Marketable Pollution Permits</b>	110
8.1 Theory of Marketable Permits	110
8.2 The Advantages of Marketable Permits	111
8.3 Types of Permit Systems	115
8.4 Permit Trading in Practice	117
<b>Chapter 9 Measuring Environmental Damage I: Total Economic Value</b>	120
9.1 The Meaning of Environmental Valuation	120
9.2 The Uses of Economic Value	122
9.3 Costs, Benefits, Willingness to Pay and Willingness to Accept	125
9.4 Total Economic Value	129
9.5 Option Value	132
9.6 Existence Value	134
9.7 Empirical Measures of Option and Existence Value	137
<b>Chapter 10 Measuring Environmental Damage II: Valuation Methodologies</b>	141
10.1 Total Economic Value and Decision-Making	141
10.2 Direct and Indirect Valuation	142
10.3 The Hedonic Price Approach	143
10.4 Contingent Valuation	148
10.5 Travel Cost Approaches	153
10.6 Willingness to Pay versus Willingness to Accept	156
<b>Chapter 11 Pollution-Control Policy in Mixed Economies</b>	159
11.1 Pollution-Control: Theory versus Practice	159
11.2 Direct Regulations: A 'Command and Control' Philosophy	161
11.3 Technology-Based Pollution Control Strategies: The USA and the UK	162
11.4 EEC Pollution-Control Policy	167
11.5 Integrated Pollution-Control: The UK BPEO Concept	169
11.6 Economic Incentive Pollution-Control Instruments	171
<b>Chapter 12 Pollution-Control in Centrally-Planned Economies</b>	177
12.1 Soviet Ideology and Environmental Image	177

12.2	Economic Self-Sufficiency and the Transformation of Nature	180
12.3	River-Diversion Schemes and the Lake Baikal Controversy	182
12.4	Comparative Environmental Effectiveness	185
⊖	<b>Chapter 13 Global Pollution Policy</b>	191
13.1	Introduction	191
13.2	Acid Rain	192
13.3	Chlorofluorocarbons	197
13.4	Carbon Dioxide and the Greenhouse Effect	201
	 <b>PART III: ETHICS AND FUTURE GENERATIONS</b>	 209
⊖	<b>Chapter 14 Discounting the Future</b>	211
14.1	The Problem	211
14.2	The Rationale for Discounting	212
14.3	A Critique of Discounting	217
14.4	Problems with the Critique of Discounting	223
14.5	An Alternative to Adjusting Discount Rates	224
⊖	<b>Chapter 15 Environmental Ethics</b>	226
15.1	Environmental Values	226
15.2	Environmental Ethics and Species Preservation	228
15.3	The Search for a New Environmental Ethic	231
	 <b>PART IV: THE ECONOMICS OF NATURAL RESOURCES</b>	 239
⊖	<b>Chapter 16 Renewable Resources</b>	241
16.1	Introduction	241
16.2	Growth Curves	242
16.3	The Rate of Exploitation	244
16.4	Costs and Revenues	245
16.5	Preservation Value	250
16.6	A More Complete Model: Introducing Time	253
16.7	Interpreting the Fundamental Rule of Renewable Resource Exploitation	255
16.8	Implications of the More Complete Model	258

• <b>Chapter 17 The Extinction of Species</b>	262
17.1 The Problem of Extinction	262
17.2 Open Access and Species Extinction	266
17.3 Profit Maximisation and Extinction	268
17.4 Why Does Extinction Occur?	269
• <b>Chapter 18 Exhaustible Resources</b>	271
18.1 Introduction	271
18.2 The Fundamental Principle of Exhaustible Resource Use	271
18.3 A Diagrammatic Exposition of Optimal Resource Use	273
18.4 Resource Prices and Backstop Technology	276
18.5 The Effects of Changing Parameters	278
18.6 Monopoly and the Rate of Extraction	284
18.7 Summarising the Optimal Use and Depletion Rules	287
• <b>Chapter 19 Measuring and Mitigating Natural Resource Scarcity</b>	288
19.1 Introduction: Malthusian and Ricardian Scarcity Recognition	288
19.2 Empirical Evidence on Resource Price Paths	290
19.3 A Typology of Scarcity and Price/Cost Scarcity Indices	295
19.4 Geochemical and Stock Pollution Constraints on Resource Exploitation	301
19.5 Resource Scarcity Mitigation: Recycling and Substitution	302
19.6 Substitution Processes	305
• <b>PART V: DEVELOPMENT AND ENVIRONMENT</b>	309
• <b>Chapter 20 Development, Preservation and Conservation</b>	311
20.1 Conservation and Preservation	311
20.2 Development and Total Economic Value	312
20.3 Irreversibility and the Krutilla–Fisher Algorithm	314
20.4 Safe Minimum Standards	317
20.5 Irreversibility and Sustainability	319
<b>Chapter 21 A Case Study of Wetlands</b>	320
21.1 Introduction	320
21.2 Social Inefficiency in Wetland Resource Use	321
21.3 What Are Wetlands?	322

21.4	Total Economic Value of Wetlands	323
21.5	Sources of Inefficiency in Wetland Resource Use: Market and Intervention Failure	324
21.6	Methodologies for the Measurement of Wetland Use Inefficiency	326
21.7	Mechanisms for Social Cost Internalisation	335
<b>Chapter 22 Environment and the Developing Countries</b>		<b>342</b>
22.1	The Problem	342
22.2	The Dependence on Natural Resources	344
22.3	Resource Interconnections	347
22.4	The Economic Cost of Resource Damage	349
22.5	Economic Incentives and Natural Resource Management Policy	352
22.6	Concluding Note	358
