List of figures	vi
List of tables	ix
Preface	xi
1 Benefit-Cost Analysis: Introduction and Overview	1
2 Investment Appraisal: Principles	18
3 Investment Appraisal: Decision-Rules	36
4 Private Benefit-Cost Analysis: Financial Analysis	62
5 Efficiency Benefit-Cost Analysis	92
6 Calculating the Net Benefits to the Referent Group	122
7 Consumer and Producer Surplus in Benefit-Cost Analysis	146
8 Valuing Traded and Non-traded Commodities in Benefit-Cost Analysis	177
9 Incorporating Risk in Benefit-Cost Analysis	194
10 The Social Discount Rate, Cost of Public Funds, and the Value of Information	221
11 Weighting Net Benefits to Account for Income Distribution	238
12 Valuation of Non-marketed Goods	261
13 Economic Impact Analysis	288
14 Writing the Benefit-Cost Analysis Report	304
Appendix 1: Case Study Assignment	332
Appendix 2: Discount and Annuity Tables	340
Index	342

Figures

1.1	The “With and Without” Approach to Benefit-Cost Analysis	3
1.2	Typical Time-Stream of Project Net Benefits	5
1.3	Relationship between the Project, Private, Efficiency and Referent Group Net Benefits	7
1.4	The Benefit-Cost Analysis Spreadsheet	12
1.5	Project Appraisal and Evaluation as a Continuous Process	15
2.1	Investment Appraisal – a Private Perspective	19
2.2	A Country’s Inter-temporal Production Possibilities Curve	22
2.3	The Inter-temporal Effects of International Trade	23
2.4	Net Benefit Stream of a Two-period Investment Project	25
2.5	Net Present Value in Relation to the Discount Rate	26
2.6	Calculating Internal Rates of Return – One Positive Value	27
2.7	Calculating Internal Rates of Return – Two Positive Values	28
2.8	Net Present Value in Relation to the Discount Rate – the Two Positive Internal Rates of Return Case	29
2.9	Net Present Value in Relation to the Discount Rate – the No Internal Rate of Return Case	30
3.1	Switching	48
3.2	Spreadsheet Presentation of DCF Calculation	54
3.3	Using Built-in Spreadsheet Formulae	56
3.4	Referencing within the Spreadsheet	58
3.5	Selecting and Pasting a Built-in Formula	59
4.1	NFG Case Study: Key Variables Table	80
4.2	NFG Case Study: Project Cash Flow Table	81
4.3	NFG Case Study: Private Net Benefits Table	83
A4.1	ICP Project Solution: Key Input Variables	89
A4.2	ICP Project Solution: The Project Cash Flow	89
A4.3	ICP Project Solution: The Private Cash Flow	90
5.1	The Efficiency Benefit-Cost Analysis Pricing Rule	93
5.2	Competitive Market Equilibrium	94
5.3	The Effect of a Minimum Wage	97
5.4	An Individual’s Leisure Supply and Demand	99
5.5	The Market for Rental Units with Rent Control	100
5.6	The Market for an Imported Good Subject to a Tariff	101
5.7	The Market for Diesel Fuel Subject to a Subsidy	102
5.8	Demand and Costs in the Electricity Industry	103
5.9	Demand for Labour by a Monopoly	105
5.10	Supply for Labour to a Monopsony	106
5.11	Monopoly Output with and without a Subsidy	107
5.12	A Consumer Good Subject to an Indirect Tax	109
5.13	NFG Case Study: Key Variables Table with Efficiency Prices	115

5.14	NFG Case Study: Efficiency Cash Flow Table	116
A5.1	ICP Project Solution: The Efficiency Cash Flow	118
6.1	The Relationship between Referent Group and Non-referent Group Net Benefits at Market Prices and Efficiency Prices	123
6.2	NFG Case Study: Referent Group Analysis Table	136
6.3	Distribution of Efficiency Net Benefits (\$ thousands, @ 10% discount rate)	137
A6.1	ICP Project Solution: The Referent Group Cash Flow	139
A6.2	ICP Project Solution: Consolidated Tables	142
7.1	Consumer Surplus	148
7.2(a)	Consumer Surplus with Inelastic Demand	150
7.2(b)	Consumer Surplus with Elastic Demand	151
7.3	Benefits of a Bridge	153
7.4	Effect of a Bridge Toll	155
7.5	Subsidizing Bus Fares	156
7.6	Effects of Worker Training	159
7.7	Benefits of an Irrigation Project	161
7.8	Change in the Rental Value of Land	163
7.9	Irrigation Water Sold at Less than Market Value	165
7.10	Effect of an Increase in Demand for Labour	166
7.11	Effects of Building a Bridge on the Benefits from a Ferry	168
7.12	ICP Project Solution: Higher Skilled Wages	170
A7.1	Compensating and Equivalent Variation	173
8.1	Consumption Opportunities with and without an Import-Replacing Project	180
8.2	The UNIDO and LM Approaches to Project Appraisal	186
8.3	The Foreign Exchange Market with a Fixed Exchange Rate	188
8.4	Supply and Demand for Foreign Exchange with Tariffs and Subsidies	189
8.5	ICP Project Solution with a Shadow Exchange Rate	192
9.1	Triangular Probability Distribution	202
9.2	Cumulative Probability Distribution	203
9.3	Projects with Different Degrees of Risk	204
9.4	The Relationship between Utility and Wealth for a Risk Averse Individual	205
9.5	A Risk Averse Individual's Indifference Map between Mean and Variance of Wealth	207
9.6(a)	Entering the Data	209
9.6(b)	Entering the Simulation Settings	210
9.6(c)	Running the Simulation	211
9.6(d)	Reading the Results of the Simulation	211
9.6(e)	Graphing the Probability Distribution	212
9.6(f)	Generating a Cumulative Probability Distribution	212
9.6(g)	Saving the Risk Analysis Results to a Spreadsheet	213
9.6(h)	Selecting a Range of Values as Risk Analysis Outputs	213
9.6(i)	Producing Summary Graphs for a Range of Outputs	214
9.7	ICP Project Risk Analysis: Programming a "Random Walk"	217

9.8	ICP Project Risk Analysis: Summary Statistics for Referent Group Net Benefits	218
9.9	ICP Project Risk Analysis: Summary Graph for a Range of Discount Rates	218
10.1	Taxation and Labour Supply	228
10.2	The Benefit and Cost of Delaying an Investment	231
10.3	ICP Project Solution with a Premium on Public Funds	235
11.1	The Lorenz Curve	240
11.2	Total Utility Curve	245
11.3	Marginal Utility Curve	246
11.4	Weighting Factors for Extra Income	249
12.1	Total Economic Value of Coral Reef Ecosystems	267
12.2	Measures of Value using the Replacement Cost Method	272
12.3	Willingness-to-pay and Consumer Surplus	274
12.4	Change in Consumer Surplus from Demand Curve Shift	275
12.5	Change in Consumer Surplus Resulting from a Price Change	275
12.6	Approximate Individual Demand Curve for Park Visits	277
13.1	The Circular Flow of Income	289

Tables

3.1	Discount Factors for 10% and 15% Discount Rates	39
3.2	Discounted Net Cash Flow for a Hypothetical Project (\$ millions)	39
3.3	Ranking of Projects by NPV and Profitability Ratio (\$ thousands)	50
3.4	Ranking Lumpy Projects (\$ thousands)	51
3.5	Two Investments with Different Lives	52
3.6	Establishing Equal Project Lives	52
4.1	Nominal vs. Real Cash Flows	65
4.2	Incremental Cash Flows	68
4.3	Calculating Depreciation Using the Straight-Line Method	70
4.4	Investment in Working Capital	71
4.5	Deriving the Private Cash Flow on Farmer's Equity	73
4.6	Project Cash Flows Equal Debt Plus Equity (Private) Cash Flows	74
4.7	NFG's Annual Operating Costs	79
A4.1	Investment Costs: Yarn-Spinning Project: ICP	86
A4.2	Employment: Yarn-Spinning Project: ICP	87
A4.3	Additional Cost of Locating in Southern Thailand	88
5.1	Indirect Taxes or Subsidies on NFG Project Inputs	114
6.1	Classification of Net Benefits	123
6.2	Using Shadow-prices to Identify Referent Group Benefits and Costs	126
9.1	Sensitivity Analysis Results: NPVs for Hypothetical Road Project (\$ thousands at 10% discount rate)	197
9.2	A Discrete Probability Distribution of Road Construction Costs (\$ thousands)	198
9.3	Calculating the Expected Value from a Discrete Probability Distribution (\$ thousands)	199
9.4	Joint Probability Distribution: Correlated Variables (\$ thousands)	200
9.5	Joint Probability Distribution: Uncorrelated Variables (\$ thousands)	200
11.1	Distribution of Households by Annual Income	239
11.2	Income Distribution by Deciles	239
11.3	Distribution of Income by Sector	240
11.4	Income Distribution by Percentile	241
11.5	Comparing Projects with Different Atemporal Distributions	243
11.6	Comparing Projects with Different Aggregate Benefits and Distributions	244
11.7	Applying Distributional Weights to Project Net Benefits	244
11.8	Responsiveness of Distributional Weights to Changes in n	249
11.9	Threshold Distributional Weights	253
11.10	Distributional Weighting in the NFG Project	254
11.11	Threshold Combinations of Distributional Weights	255
11.12	Composite Distributional Weights	258
12.1	Hypothetical Water Quality Improvement Project Options	270
12.2	Hypothetical Travel Cost Example	277
12.3	Impact of Road Noise Changes on Property Values	280

12.4	Estimating Net Benefits of Improved Water Quality using CVM	281
12.5	Example of a Hypothetical Choice Set	282
13.1	Inter-Industry Structure of a Small Closed Economy	297
A14.1	Project Analysis	312
A14.2	Private Analysis	313
A14.3	Efficiency Analysis	314
A14.4	Referent Group Analysis	314
A14.5	Summary Information	316
A14.6	Option 1: Bangkok – No Concessions – Key Variables	317
A14.7	Option 1: Bangkok – No Concessions	318
A14.8	Option 2: Bangkok – No Duties	320
A14.9	Option 3: Bangkok – No Profits Tax	322
A14.10	Option 4: Southern Thailand – No Concessions	324
A14.11	Option 5: Southern Thailand – No Duties	326
A14.12	Option 6: Southern Thailand – No Profits Tax	328
A14.13	Option 7: Southern Thailand – No Duties, No Profits Tax	330
