List of Figures

2.1. LISREL estimates of structural equations model of (differential participation in the Bern Declaration standardized solutions)	37
2.2. LISREL estimates of structural equations model of differential participation in the WWF (standardized solutions)	38
3.1. NSDAP single members, 1925–30	56
3.2. Geographical location of single members joining in 1925–6	59
3.3. Geographical location of chapter founded by single members in 1925	61
3.4. Network structure of memberships in right-wing associations among single members	70
4.1. Social protest and repression: 1965–82	81
4.2. 1966 Organization to organization ties ($N = 4$)	88
4.3. 1967/8 Organization to organization ties ($N = 7$)	89
4.4. 1969/70 Organization to organization ties ($N = 6$)	90
4.5. 1976/7 Organization to organization ties ($N = 10$)	96
4.6. 1978/9 Organization to organization ties ($N = 19$)	97
4.7. 1980/1 Organization to organization ties ($N = 23$)	99
4.8. Networks and protest events, 1966–70	102
4.9. Networks and protest events, 1976–81	103
5.1. The Milan environmental alliance network	114
5.2. The network without the four top brokers	115
6.1. Image matrix of the Bay Area environmental movement	133

7.1. Event types in Kent, 1828–34	157
7.2. Event types in Lancashire, 1828–34	158
7.3. Event types in Middlesex, 1828–34	159
7.4. Event types in Great Britain, 1828–34	160
7.5. <i>Attack</i> relations among categories of actors, Kent 1828–34 (0.5%+ of all relations in place and period)	164
7.6. <i>Attack</i> relations among categories of actors, Lancashire 1828–34 (0.5%+ of all relations in place and period)	165
7.7. <i>Attack</i> relations among categories of actors, Middlesex 1828–34 (0.5%+ of all relations in place and period)	165
7.8. <i>Claim</i> relations among categories of actors, Kent 1828–34 (0.5% + of all relations in place and period)	166
7.9. <i>Claim</i> relations among categories of actors, Lancashire 1828–34 (0.5%+ of all relations in place and period)	167
7.10. <i>Claim</i> relations among categories of actors, Middlesex 1828–34 (0.5% + of all relations in place and period)	168
7.11. Parliamentarization as changing objects of claims	171
7.12. Differences in parliamentarization among Kent, Lancashire, and Middlesex, 1828–34	171
8.1. Random processes produce apparent cycles	181
8.2. Diffusion in networks with all ties	183
8.3. Comparison of different patterns of network ties	187
8.4. Media coverage as flat percentage provides communication	189
8.5. Comparison of action diffusion when news coverage rate is 100%, 50%, 20%, or a function of number of actors	190
8.6. Comparison of actual event series with events reported in the news	190
8.7. Independent issue attention cycle can distort apparent protest cycle	191

8.8. Influence processes in cliqued, bridged and random networks	193
8.9. Network ties are probabilistic and can be increased by contact	194
8.10. Hidden organizing against a backdrop of random noise	197
8.11. The average probability which is rising in hiding varies tremendously with network structure	198
8.12. Probability of organizing for a big event	199
9.1. The bonds of conjoint action (CA)	208
9.2. Oita prefecture with sites of environmental conflict	211
9.3. The triple control machine from nation to hamlet	220
12.1. The process of individual recruitment	288
12.2. The process of 'emergent mobilization'	291
12.3. The process of 'scale shift' or 'movement spread'	294
13.1. Clique structure	308
13.2. Policephalous structure	309
13.3. Wheel/star structure	310
13.4. Segmented, decentralized network	312

List of Tables

1.1. A summary of the empirical approaches presented in this book	13
2.1. The impact of the socialization and structural-connection functions on intensity of participation (multiple regression)	32
2.2. Direct and total effects of networks on individual perceptions and differential participation in the Bern Declaration and the WWF (standardized solutions)	39
2.3. The Bern Declaration survey	47
2.4. The WWF survey	47
3.1. Development of single member status, NSDAP, 1925–30	55
3.2. Single members and NSDAP party chapters, 1925–30	57
3.3. Distances of single member locations from Munich by cohort (in km)	60
3.4. Economic branch distribution for single members and population, 1925	63
3.5. Social class characteristics of single members, total membership, and population	64
3.6. Memberships and chapter creations by single members	66
5.1. Average in-degree scores for SMOs with/without regular linkages to public institutions and national media	110
5.2. OLS coefficients predicting in-degree scores (square root) in the Milan environmental alliance network ($N = 42$; standard errors in parentheses)	111
5.3. Regular linkages to public institutions and national media for SMOs with different brokerage scores ($N = 42$)	113

5.4. Logistic coefficients predicting brokerage capacity in the Milan environmental alliance network ($N = 42$; standard errors in parentheses)	116
6.1. Summary measures of variables measuring propensity to collaboration with government agencies and dialogue with opposing groups	129
6.2. OLS coefficients predicting propensity to collaboration with government agencies ($N = 62$; standard errors in parentheses)	133
6.3. OLS coefficients predicting propensity to dialogue with opposing groups ($N = 63$; standard errors in parentheses)	135
6.4. Pearson correlations between block membership and survey variables	137
7.1. Distribution of contentious gatherings over time and space	153
7.2. Selected objects of claims, 1828–34, as percentage of all claims	154
7.3. Frequencies of major verb categories, 1828–34, by county	162
7.4. Three-step relation strengths of major actors, 1828–34, by county	169
9.1. Environmental movements in eight Japanese communities: affecting factors	214
13.1. Social movements and cognate collective dynamics	302
