Preface

vii

1. Introduction	1
1.1 Programming Problems	1
1.2 General form of Mathematical Programming Problem	2
1.3 Examples	2
1.3.1 Activity-Analysis Problem	3
1.3.2 The Diet Problem	4
1.3.3 Production Allocation Problem	4
1.3.4 Consumer Problem	5
1.3.5 The Travelling Salesman Problem	6
2. Mathematical Background	9
2.1 Matrices	9
2.1.1 Determinants	10
2.1.2 Minors	10
2.1.3 Operations on Matrices	11
2.1.4 Inverse of a Matrix	12
2.2 Simultaneous Linear Equations	14
2.3 Convex sets	16
2.3.1 Convex Sets	16
2.3.2 Alternate Definition of a Convex Set	18
2.3.3 Extreme Points	19
2.3.4 Convex Hull	20
2.3.5 Convex Polyhedron	20
3. Linear Programming: Graphical Method	21
3.1 Graphical Method of Finding the Solution of a Subclass of this General LPP	21
3.1.1 General Formulation of an LPP	21
3.1.2 Maximization Problem	22

X Contents

3.2	Hyperplanes and Half Spaces	23
3.3	Types of Solutions to LPP	24
3.3.2	Feasible Solution	25
3.3.3	Basic Solution	25
3.3.4	Basic Feasible Solution	26
3.3.5	Degenerate Basic Feasible Solution	26
3.3.6	Maximum Feasible Solution	26
3.4	Graphical Method	29
	<i>Exercises</i>	39
4.	Linear Programming: Simplex Method	42
4.1	Introduction	42
4.2	Generating Basic Feasible Solutions	43
4.3	Improved Basic Feasible Solutions	47
4.4	Relation Between BFS and Extreme Point	52
4.5	Computational Algorithm	54
4.6	The Artificial Basis Technique	59
4.6.1	Penalty Method	60
4.6.2	Two Phase Method	65
4.7	Degeneracy and Cycling	71
4.7.1	We use the following method is avoid cycling for maximizing objective function LPP	71
4.7.2	An Example of Cycling	72
	<i>Exercises</i>	75
5.	Duality in Linear Programming	77
5.1	Introduction	77
5.2	Symmetric and Unsymmetric Primal Dual Problem	77
5.3	Duality Theorem	81
5.4	Complementary Slackness Theorem	86
5.5	Solution of Dual From Primal and Vice Versa	87
5.6	Dual Simplex Method	93
5.6.1	Dual Simplex Algorithm	93
	<i>Exercises</i>	96
6.	The Revised Simplex Method	100
6.1	Introduction	100
6.2	The General Form of the Inverse	101
6.3	Computational Procedure of Revised Simplex Method	102
	<i>Exercises</i>	109

7. The Transportation Problem	110
7.1 Introduction	110
7.2 Formulation of General Transportation Problem	110
7.3 Unbalanced Transportation Problem	111
7.4 Theorems	112
7.5 Finding Initial Basic Feasible Solution	114
7.5.1 The North-West Corner Rule	115
7.5.2 The Matrix Minima Method	117
7.5.3 The Row Minima Method	119
7.5.4 The Column Minima Method	120
7.5.5 The Vogel Approximation Method (VAM)	121
7.6 Finding Optimal Solution	123
7.6.1 UV Method or MODI Method	124
7.6.2 Summary of UV Method	125
7.7 Degeneracy in Transportation Problem	128
7.7.1 ϵ -Perturbation Technique	128
<i>Exercises</i>	138
8. Assignment Problem	143
8.1 Introduction	143
8.2 Mathematical Formulation of the Assignment Problem	144
8.3 Variation of the Assignment Problem	144
8.4 Theorems of Assignment Problem	145
8.4.1 Theorem (Reduction Theorem)	145
8.4.2 Theorem	146
8.5 The Hungarian Method	146
8.6 Unbalanced Assignment Problem	147
8.7 Multiple Solutions	151
8.8 The Travelling Salesman Problem	159
8.8.1 Mathematical Formulation of Travelling Salesman Problem	159
8.8.2 Formulation of Travelling Salesman Problem as an Assignment Problem	160
<i>Exercises</i>	162
9. Game Theory	166
9.1 Introduction	166
9.2 Matrix Game	166
9.3 Definitions	167
9.3.1 Strategy	167
9.3.2 Mixed Strategy	167

9.3.3	Pure Strategy	167
9.3.4	Pay-off function for p1	167
9.3.5	Solution of the Game	168
9.4	One Simple Example	168
9.4.1	Definition of Saddle Point	168
9.5	Dominance Rule	169
9.6	Solution of a 2×2 Matrix Game	170
9.7	Graphical Solution of a $2 \times n$ Matrix Game	172
9.7.1	Algorithm for solving $2 \times n$ matrix game	172
9.8	Graphical Solution of an $m \times 2$ Matrix Game	174
9.9	Solution of an $m \times n$ Matrix Game	175
9.10	Iterative Method for Approximate Solution	179
9.11	Solution of $N \times N$ Games (Arithmetic Method/Method of Matrix Oddments)	181
9.12	Some More Examples	187
9.13	Dominance Rule (Problems)	200
	<i>Exercises</i>	203
10.	Dynamic Programming	206
10.1	Introduction	206
10.2	Characteristics of Dynamic Programming	207
10.3	Multi-Stage Decision Problems	207
10.4	Solution of LPP by Dynamic Programming	209
10.5	Computational Procedure for Continuous System	213
10.6	Computational Procedure for Discrete System	218
11.	Integer Programming Problem	225
11.1	Introduction	225
11.2	Gomory's Cutting Plane Method	226
11.2.1	All ILPP algorithm	226
11.2.2	Construction of Gomory's Constraints for an all ILP	227
11.2.3	Example of all ILPP	231
11.2.4	Mixed ILPP	241
11.2.5	Construction of Gomory's constraint for a mixed ILPP	241
11.3	Branch and Bound Method	244
	<i>Exercises</i>	254
12.	Project Management	257
	Scheduling by Pert and CPM	257
	Basic Terminologies	257
	Immediate predecessor and Immediate successor	258

Dummy Activity	258
Rules for constructing a project network	258
Floats	263
Explanation	266
PERT (Programme Evaluation Review Technique)	266
The assumptions made in PERT calculations	267
Procedure	267
Network diagram	268
Network diagram	271
Crashing Network	274
Least cost schedule	274
Remark	274
<i>Exercises</i>	278
13. Decision Theory	281
13.1 Introduction	281
13.2 Elements of Decision Model	281
13.3 Steps in Decision Theory Approach	281
13.4 Decision Making Under Certainty	282
13.5 Decision Making Under Uncertainty	282
13.6 Maximin Criterion	282
13.7 Maximax Criterion	282
13.8 Hurwicz Criterion	283
13.9 Laplace Criterion	284
13.10 Minimax Regret Criterion	284
<i>Exercises</i>	287
13.11 Expected Monetary Value Criterion	288
13.12 Expected Opportunity Loss Criterion	290
<i>Exercises</i>	291
14. Sensitivity Analysis	293
14.1 Introduction	293
14.2 Basic Principles in Sensitivity	294
14.2.1 Change in the Coefficients of the Objective Function	294
14.2.2 Changes in the Rhs of the Constraint	296
15. Goal Programming	299
15.1 Introduction	299
15.2 Formation of A Goal Programming (Gp)	299
15.3 Single Goal Models	300

16. Queueing Theory	306
Introduction	306
Queueing Problems	306
Classification of Queues	307
Kendall's Notation for Representing Queueing Models	307
Model I: (M/M/1): (FIFO)	307
Relation Between Average Queue Length and Average Waiting Time—Little's Formula	313
Model II: (M/M/1): (N/FIFO)	313
Model III (M/M/C): (∞ /FIFO)	314
Measures of This Model	316
Model IV (M/M/C): (FIFO/N)	317
Solved Problems	318
<i>Exercises</i>	326
Bibliography	331
Index	333
