

Contents

1	The Uses of Paradox	1
1.1	Paradox in Physics	2
1.2	Errors	3
1.3	Gaps	4
1.4	Contradictions	7
1.5	Overview of the Book	8
	References	9
2	How to Weigh a Quantum	11
2.1	Why does the Color of the Light Change?	11
2.2	Quanta	14
2.3	Uncertainty Relations	15
2.4	The Clock-in-the-Box Paradox	17
2.5	From Inconsistency to Incompleteness	21
	References	23
3	Is Quantum Theory Complete?	25
3.1	The Einstein–Podolsky–Rosen Paradox	25
3.2	Polarized Photons	28
3.3	Quantum States and Observables	31
3.4	Bell’s Inequality	32
3.5	Paradox and Beyond	36
	References	40
4	Phases and Gauges	43
4.1	Two Paradoxical Procedures	43
4.2	Classical and Quantum Phases	45
4.3	Phase Meets Gauge	46
4.4	The Aharonov–Bohm Effect	48
4.5	Quantum Consistency and the Aharonov–Bohm Effect	51
4.6	Flux Quantization	53
4.7	Magnetoresistance	54
4.8	Non-Abelian Phases	55
	References	59

5	Modular Variables	61
5.1	A Lattice of Solenoids	61
5.2	Non-overlapping Wave Packets	65
5.3	Modular Momentum	67
5.4	The x_{mod}, p_{mod} Representation	69
5.5	Intimations of Nonlocality	71
	References	75
6	Nonlocality and Causality	77
6.1	Causality and a Piston	77
6.2	Quantum Effects Without Classical Analogues	79
6.3	Modular Energy	84
6.4	Reconciling the Irreconcilable	86
	References	91
7	Quantum Measurements	93
7.1	The Velocity Paradox	94
7.2	A Quantum Measurement Paradigm	95
7.3	Quantum Measurements and Uncertainty Relations	99
7.4	Paradox Lost	101
	References	103
8	Measurement and Compensation	105
8.1	Paradox Regained	106
8.2	Compensating Forces	108
8.3	Quantum Measurements of Noncanonical Observables	110
8.4	Measuring the Electric Field	111
8.5	Energy and Time	113
	References	120
9	Quantum Cats	121
9.1	Schrödinger's Cat	121
9.2	A Quantum Catalyst	124
9.3	Quantum Concatenations	127
9.4	A Quantum Catalog	130
	References	135
10	A Quantum Arrow of Time?	137
10.1	A Quantum Card Trick	138
10.2	Time Reversal	139
10.3	The Aharonov–Bergmann–Lebowitz Formula	141
10.4	The Arrow of Time Revisited	143
10.5	Boundary Conditions on the Universe	145
	References	148

11 Superselection Rules	149
11.1 Superselection Rule for Angular Momentum?	149
11.2 T and Spin	151
11.3 The Wick–Wightman–Wigner Argument	153
11.4 Everything is Relative	153
11.5 Superposing Charge States	157
References	159
12 Quantum Slow Dance	161
12.1 A Watched Pot Never Boils	161
12.2 The Adiabatic Approximation	162
12.3 Feynman Paths	167
12.4 Classical Analogues	171
References	176
13 Charges and Fluxons	177
13.1 Hidden Momentum?	177
13.2 Duality of the Aharonov–Bohm Effect	180
13.3 The Aharonov–Bohm Effect and Berry’s Phase	183
13.4 The Aharonov–Casher Effect	185
References	190
14 Quantum Measurements and Relativity	193
14.1 Collapse and Relativity	193
14.2 Relativistic Constraints on Measurements	196
14.3 Nonlocal Measurements	198
14.4 Which Nonlocal Operators are Measurable?	200
14.5 Measuring a Nonlocal Operator	203
14.6 Collapse and Relativity Revisited	205
References	209
15 How to Observe a Quantum Wave	211
15.1 Dipole Paradox	211
15.2 How <i>not</i> to Observe a Quantum Wave	213
15.3 Protective Measurements	214
15.4 Galilean Dialogue	216
15.5 Protective Measurements and Causality	218
15.6 Towards Quantum Field Theory	222
References	224
16 Weak Values	225
16.1 A Weak Measurement	225
16.2 A Paradox of Errors	227
16.3 Pre- and Postselected Ensembles	230
16.4 Weak Measurements and Weak Values	233

16.5	A Quantum Shell Game	235
16.6	The Quantum Walk	237
16.7	Faster than Light	240
16.8	Galilean Dialogue	243
	References	247
17	Weak Values and Entanglement	249
17.1	Interaction-free Paradox	249
17.2	A Grin Without a Cat	251
17.3	Alice and Bob in Wonderland	253
17.4	Galilean Dialogue	255
17.5	Complex Weak Values	256
	References	263
18	The Quantum World	265
18.1	Weak Measurements and Interference	265
18.2	From Amplitudes to Probabilities	268
18.3	The Fate of the Universe	271
18.4	The Role of \hbar	273
18.5	Causality and Nonlocality as Axioms	276
18.6	Causality, Nonlocality and Scaling	278
18.7	What is the Quantum World?	280
	References	286
	Index	287
