CONTENTS

Series Editor's Introduction v

1. **Introduction** 1

2. **Repeated Measures Situations** 2
   - Advantages and Disadvantages 3
   - Counterbalancing 3
   - Application of Repeated Measures Designs 4

3. **Single-Factor Studies** 6
   - Additive Model 7
   - Nonadditive Model 8
   - The Analysis 10
   - Validity Assumptions of Repeated Measures ANOVA 13
   - Adjusted Degrees of Freedom 19
   - Trend Analysis 21
   - Multivariate Approach 22
   - ANOVA Versus MANOVA 25
   - Analyses of Means Differences 26
   - Strength of Association Between Independent and Response Variables 29

4. **Two-Factor Studies with Repeated Measures on Both Factors** 31
   - Partitioning of Sums of Squares 32
   - Calculation of Sums of Squares 35
   - Mean Squares and *F* Ratios 36
   - Assumptions of the Factorial Analysis with Repeated Measures 38
   - Multivariate Tests 39
   - Analyses of Means Differences 39
   - Strength of Association Between Independent and Response Variables 41

5. **Two-Factor Study with Repeated Measures on One Factor** 41
   Partitioning of Sums of Squares 42
   Computation of Sums of Squares 46
   Calculation of Mean Squares and *F* Ratios 46
   Assumptions Underlying the Mixed Design 48
   Multivariate Analyses 50
   Analyses of Means Differences 50
   Quasi *F* Ratios 55
   Pretest-Posttest Designs 57
   Strength of Association Between Independent and Response Variables 59

6. **Three-Factor Studies** 59
   Studies with Repeated Measures on One Factor 59
   Studies with Repeated Measures on Two Factors 65
   Missing Data 70
   An Actual Study 71
