About the Authors	ii
Foreword	xxi
Preface	xxiii
Table of Notation	xxvii
Chapter 1	
Introduction and Overview	1
1.1 First Intuitions on Planning	1
1.2 Forms of Planning	2
1.3 Domain-Independent Planning	3
1.4 Conceptual Model for Planning	5
1.5 Restricted Model	9
1.6 Extended Models	11
1.7 A Running Example: Dock-Worker Robots	13

PART I

Classical Planning **17**

Chapter 2	
Representations for Classical Planning	19
2.1 Introduction	19
2.2 Set-Theoretic Representation	20
2.2.1 Planning Domains, Problems, and Solutions	20
2.2.2 State Reachability	22

2.2.3	Stating a Planning Problem	23	
2.2.4	Properties of the Set-Theoretic Representation	24	
2.3	Classical Representation		27
2.3.1	States	27	
2.3.2	Operators and Actions	28	
2.3.3	Plans, Problems, and Solutions	31	
2.3.4	Semantics of Classical Representations	33	
2.4	Extending the Classical Representation		34
2.4.1	Simple Syntactical Extensions	34	
2.4.2	Conditional Planning Operators	34	
2.4.3	Quantified Expressions	36	
2.4.4	Disjunctive Preconditions	37	
2.4.5	Axiomatic Inference	38	
2.4.6	Function Symbols	39	
2.4.7	Attached Procedures	39	
2.4.8	Extended Goals	39	
2.5	State-Variable Representation		41
2.5.1	State Variables	41	
2.5.2	Operators and Actions	43	
2.5.3	Domains and Problems	44	
2.5.4	Properties	46	
2.6	Comparisons		47
2.7	Discussion and Historical Remarks		49
2.8	Exercises		50

Chapter 3

Complexity of Classical Planning		55
3.1	Introduction	55
3.2	Preliminaries	56
3.3	Decidability and Undecidability Results	57
3.4	Complexity Results	59
3.4.1	Binary Counters	60
3.4.2	Unrestricted Classical Planning	61
3.4.3	Other Results	63
3.5	Limitations	65
3.6	Discussion and Historical Remarks	66
3.7	Exercises	66

Chapter 4		
State-Space Planning		69
4.1	Introduction	69
4.2	Forward Search	69
4.2.1	Formal Properties	70
4.2.2	Deterministic Implementations	72
4.3	Backward Search	73
4.4	The STRIPS Algorithm	76
4.5	Domain-Specific State-Space Planning	78
4.5.1	The Container-Stacking Domain	78
4.5.2	Planning Algorithm	79
4.6	Discussion and Historical Remarks	81
4.7	Exercises	81
Chapter 5		
Plan-Space Planning		85
5.1	Introduction	85
5.2	The Search Space of Partial Plans	86
5.3	Solution Plans	91
5.4	Algorithms for Plan-Space Planning	94
5.4.1	The PSP Procedure	94
5.4.2	The PoP Procedure	99
5.5	Extensions	100
5.6	Plan-Space versus State-Space Planning	101
5.7	Discussion and Historical Remarks	103
5.8	Exercises	105

PART II

Neoclassical Planning	111
------------------------------	------------

Chapter 6		
Planning-Graph Techniques		113

6.1	Introduction	113
6.2	Planning Graphs	114
6.2.1	Reachability Trees	114
6.2.2	Reachability with Planning Graphs	117
6.2.3	Independent Actions and Layered Plans	119
6.2.4	Mutual Exclusion Relations	120
6.3	The Graphplan Planner	123
6.3.1	Expanding the Planning Graph	123
6.3.2	Searching the Planning Graph	125
6.3.3	Analysis of Graphplan	129
6.4	Extensions and Improvements of Graphplan	131
6.4.1	Extending the Language	131
6.4.2	Improving the Planner	133
6.4.3	Extending the Independence Relation	134
6.5	Discussion and Historical Remarks	137
6.6	Exercises	139

Chapter 7

	Propositional Satisfiability Techniques	143
7.1	Introduction	143
7.2	Planning Problems as Satisfiability Problems	144
7.2.1	States as Propositional Formulas	144
7.2.2	State Transitions as Propositional Formulas	145
7.2.3	Planning Problems as Propositional Formulas	147
7.3	Planning by Satisfiability	151
7.3.1	Davis-Putnam Procedure	152
7.3.2	Stochastic Procedures	156
7.4	Different Encodings	160
7.4.1	Action Representation	161
7.4.2	Frame Axioms	162
7.5	Discussion and Historical Remarks	164
7.6	Exercises	165

Chapter 8

Constraint Satisfaction Techniques	167
8.1 Introduction	167
8.2 Constraint Satisfaction Problems	168
8.3 Planning Problems as CSPs	172
8.3.1 Encoding a Planning Problem into a CSP	174
8.3.2 Analysis of the CSP Encoding	177
8.4 CSP Techniques and Algorithms	178
8.4.1 Search Algorithms for CSPs	178
8.4.2 Filtering Techniques	180
8.4.3 Local Search Techniques and Hybrid Approaches	184
8.5 Extended CSP Models	185
8.5.1 Active CSPs	185
8.5.2 Valued CSPs	187
8.6 CSP Techniques in Planning	187
8.6.1 CSPs in Plan-Space Search	187
8.6.2 CSPs for Planning-Graph Techniques	188
8.7 Discussion and Historical Remarks	189
8.8 Exercises	190

PART III

Heuristics and Control Strategies **193**

Chapter 9

Heuristics in Planning	199
9.1 Introduction	199
9.2 Design Principle for Heuristics: Relaxation	199
9.3 Heuristics for State-Space Planning	201
9.3.1 State Reachability Relaxation	201
9.3.2 Heuristically Guided Backward Search	204
9.3.3 Admissible State-Space Heuristics	205
9.3.4 Graphplan as a Heuristic Search Planner	207

9.4	Heuristics for Plan-Space Planning	208
9.4.1	Flaw-Selection Heuristics	208
9.4.2	Resolver-Selection Heuristics	212
9.5	Discussion and Historical Remarks	213
9.6	Exercises	214

Chapter 10

Control Rules in Planning	217	
10.1	Introduction	217
10.2	Simple Temporal Logic	218
10.3	Progression	220
10.4	Planning Procedure	222
10.5	Extensions	223
10.6	Extended Goals	224
10.7	Discussion and Historical Remarks	226
10.8	Exercises	227

Chapter 11

Hierarchical Task Network Planning	229	
11.1	Introduction	229
11.2	STN Planning	231
11.2.1	Tasks and Methods	231
11.2.2	Problems and Solutions	235
11.3	Total-Order STN Planning	238
11.4	Partial-Order STN Planning	240
11.5	HTN Planning	244
11.5.1	Task Networks	244
11.5.2	HTN Methods	245
11.5.3	HTN Problems and Solutions	247
11.5.4	Planning Procedures	248
11.6	Comparisons	250
11.6.1	HTN Planning versus STN Planning	250
11.6.2	HTN Methods versus Control Rules	251
11.7	Extensions	252

11.7.1	Extensions from Chapter 2	252
11.7.2	Additional Extensions	255
11.8	Extended Goals	256
11.9	Discussion and Historical Remarks	257
11.10	Exercises	259

Chapter 12

Control Strategies in Deductive Planning **263**

12.1	Introduction	263
12.2	Situation Calculus	264
12.2.1	Situations	264
12.2.2	Actions	265
12.2.3	Planning Domains, Problems, and Solutions	267
12.2.4	Plans as Programs in Situation Calculus	269
12.3	Dynamic Logic	270
12.3.1	The Language of the Logic	271
12.3.2	The Semantics	272
12.3.3	The Deductive Machinery	273
12.3.4	Planning Domains, Problems, and Solutions	273
12.3.5	Extensions	274
12.3.6	User-Defined Control Strategies as Tactics	275
12.4	Discussion and Historical Remarks	276
12.5	Exercises	278

PART IV

Planning with Time and Resources **281**

Chapter 13

Time for Planning **285**

13.1	Introduction	285
13.2	Temporal References and Relations	285
13.3	Qualitative Temporal Relations	290

13.3.1	Point Algebra	290	
13.3.2	Interval Algebra	293	
13.3.3	A Geometric Interpretation of Interval Algebra	299	
13.3.4	Interval Algebra versus Point Algebra	301	
13.4	Quantitative Temporal Constraints		302
13.4.1	Simple Temporal Constraints	303	
13.4.2	Temporal Constraint Networks	305	
13.5	Discussion and Historical Remarks		306
13.6	Exercises		307

Chapter 14

Temporal Planning			309
14.1	Introduction		309
14.2	Planning with Temporal Operators		310
14.2.1	Temporal Expressions and Temporal Databases	310	
14.2.2	Temporal Planning Operators	314	
14.2.3	Domain Axioms	317	
14.2.4	Temporal Planning Domains, Problems, and Plans	320	
14.2.5	Concurrent Actions with Interfering Effects	321	
14.2.6	A Temporal Planning Procedure	323	
14.3	Planning with Chronicles		326
14.3.1	State Variables, Timelines, and Chronicles	327	
14.3.2	Chronicles as Planning Operators	334	
14.3.3	Chronicle Planning Procedures	336	
14.3.4	Constraint Management in CP	339	
14.3.5	Search Control in CP	341	
14.4	Discussion and Historical Remarks		343
14.5	Exercises		345

Chapter 15

Planning and Resource Scheduling			349
15.1	Introduction		349
15.2	Elements of Scheduling Problems		351
15.2.1	Actions	352	
15.2.2	Resources	352	
15.2.3	Constraints and Cost Functions	354	

15.3	Machine Scheduling Problems	356
15.3.1	Classes of Machine Scheduling Problems	356
15.3.2	Complexity of Machine Scheduling	358
15.3.3	Solving Machine Scheduling Problems	360
15.3.4	Planning and Machine Scheduling	360
15.4	Integrating Planning and Scheduling	362
15.4.1	Representation	362
15.4.2	Detecting Resource Conflicts	367
15.4.3	Managing Resource Conflict Flaws	370
15.5	Discussion and Historical Remarks	372
15.6	Exercises	373

PART V

Planning under Uncertainty **375**

Chapter 16

Planning Based on Markov Decision Processes **379**

16.1	Introduction	379
16.2	Planning in Fully Observable Domains	380
16.2.1	Domains, Plans, and Planning Problems	380
16.2.2	Planning Algorithms	386
16.3	Planning under Partial Observability	392
16.3.1	Domains, Plans, and Planning Problems	392
16.3.2	Planning Algorithms	396
16.4	Reachability and Extended Goals	397
16.5	Discussion and Historical Remarks	398
16.6	Exercises	400

Chapter 17

Planning Based on Model Checking **403**

17.1	Introduction	403
17.2	Planning for Reachability Goals	404

17.2.1	Domains, Plans, and Planning Problems	405	
17.2.2	Planning Algorithms	408	
17.3	Planning for Extended Goals		414
17.3.1	Domains, Plans, and Planning Problems	414	
17.3.2	Planning Algorithms	418	
17.3.3	Beyond Temporal Logic	421	
17.4	Planning under Partial Observability		425
17.4.1	Domains, Plans, and Planning Problems	425	
17.4.2	Planning Algorithms	429	
17.5	Planning as Model Checking versus MDPs		432
17.6	Discussion and Historical Remarks		432
17.7	Exercises		434

Chapter 18

	Uncertainty with Neoclassical Techniques		437
18.1	Introduction		437
18.2	Planning as Satisfiability		437
18.2.1	Planning Problems	438	
18.2.2	Planning Problems as Propositional Formulas	439	
18.2.3	Planning by Satisfiability	442	
18.2.4	QBF Planning	442	
18.3	Planning Graphs		443
18.4	Discussion and Historical Remarks		446
18.5	Exercises		447

PART VI

Case Studies and Applications **449**

Chapter 19		
Space Applications		451
19.1	Introduction	451
19.2	Deep Space 1	451

19.3	The Autonomous Remote Agent	451
19.4	The Remote Agent Architecture	453
19.5	The Planner Architecture	457
19.6	The Deep Space 1 Experiment	461
19.6.1	Validation Objectives	462
19.6.2	Scenarios	463
19.6.3	Experiment Results	464
19.6.4	Lessons Learned	466
19.7	Discussion and Historical Remarks	466
Chapter 20		
	Planning in Robotics	469
20.1	Introduction	469
20.2	Path and Motion Planning	471
20.3	Planning for the Design of a Robust Controller	477
20.3.1	Sensory-Motor Functions	478
20.3.2	Modalities	480
20.3.3	The Controller	483
20.3.4	Analysis of the Approach	487
20.4	Dock-Worker Robots	487
20.5	Discussion and Historical Remarks	490
Chapter 21		
	Planning for Manufacturability Analysis	493
21.1	Introduction	493
21.2	Machined Parts	493
21.3	Feature Extraction	495
21.4	Generating Abstract Plans	497
21.5	Resolving Goal Interactions	499
21.6	Additional Steps	499
21.7	Operation Plan Evaluation	502
21.8	Efficiency Considerations	502
21.9	Concluding Remarks	503

Chapter 22

Emergency Evacuation Planning	505
22.1 Introduction	505
22.2 Evacuation Operations	506
22.3 Knowledge Representation	507
22.3.1 HTNs	507
22.3.2 Cases	508
22.4 Hierarchical Task Editor	508
22.5 SiN	509
22.5.1 How SiN Works	509
22.5.2 Correctness of SiN	511
22.5.3 Imperfect World Information	511
22.6 Example	512
22.7 Summary	513
22.8 Discussion and Historical Remarks	515

Chapter 23

Planning in the Game of Bridge	517
23.1 Introduction	517
23.2 Overview of Bridge	517
23.3 Game-Tree Search in Bridge	519
23.4 Adapting HTN Planning for Bridge	521
23.5 Implementation and Results	524

PART VII

Conclusion	525
-------------------	------------

Chapter 24

Other Approaches to Planning	527
24.1 Case-Based Planning	527
24.2 Linear and Integer Programming	529

24.3	Multiagent Planning	530
24.4	Plan Merging and Plan Rewriting	531
24.5	Abstraction Hierarchies	532
24.6	Domain Analysis	534
24.7	Planning and Learning	535
24.8	Planning and Acting, Situated Planning, and Dynamic Planning	536
24.9	Plan Recognition	537
24.10	Suggestions for Future Work	540

PART VIII

Appendices **541**

Appendix A

Search Procedures and Computational Complexity **543**

A.1	Nondeterministic Problem Solving	543
A.2	State-Space Search	544
A.3	Problem-Reduction Search	548
A.4	Computational Complexity of Procedures	550
A.5	Computational Complexity of Problems	551
A.6	Planning Domains as Language-Recognition Problems	552
A.7	Discussion and Historical Remarks	553

Appendix B

First-Order Logic **555**

B.1	Introduction	555
B.2	Propositional Logic	555
B.3	First-Order Logic	557

Appendix C

Model Checking	561
C.1 Introduction	561
C.2 Intuitions	561
C.3 The Model Checking Problem	563
C.4 Model Checking Algorithms	565
C.5 Symbolic Model Checking	567
C.6 BDD-Based Symbolic Model Checking	570
Bibliography	573
Index	609
