

TABLE OF CONTENTS

| | | |
|---|---|----|
| FOREWORD | v | |
| OVERVIEW | vii | |
| CHAPTER 1: DETERMINISTIC INVENTORY MODELS | | |
| § 1 | Introduction | 1 |
| § 2 | Economic Order Quantity (EOQ) | 2 |
| § 3 | Costs and Sensitivity | 8 |
| § 4 | RM-Systems (ABC Analysis) | 12 |
| § 5 | Product-Mix Decision | 13 |
| § 6 | Estimating the Rate of Demand | 14 |
| § 7 | Profit Maximization | 18 |
| § 8 | Inventory Evaluation | 19 |
| § 9 | Quantity Discount | 22 |
| §10 | Collective or Single Order ? | 25 |
| §11 | Optimal Stocking in Serial Production | 28 |
| §12 | Stock-outs Allowed | 30 |
| §13 | Discrete Lot Sizes | 33 |
| §14 | Consideration of Shelf Space in Inventory | 35 |
| §15 | Budget Restriction | 38 |
| §16 | Known but Varying Demand | 42 |
| §17 | Fixed Delivery Period τ | 46 |
| §18 | Safety Stock with Stochastic Delivery Time (including Just-in-Time Production) | 47 |
| CHAPTER 2: THE WILSON MODEL WITH POISSON DEMAND | | |
| §19 | Poisson Process | 56 |
| §20 | General Remarks on Chance | 66 |
| §21 | Interest, Continuous Interest, Present Value | 69 |

| | | |
|-----|--|----|
| §22 | Inventory with Poisson Demand and Immediate Delivery | 72 |
| §23 | Poisson Demand, No Discounting | 79 |
| §24 | Recurrent Process | 83 |
| §25 | Proof of Optimality | 88 |

CHAPTER 3: STOCHASTIC SINGLE PERIOD MODELS

| | | |
|-----|---|-----|
| §26 | The Newsboy Problem | 91 |
| §27 | Evaluation of $P(x) = \frac{g}{h + g}$ | 95 |
| §28 | Temporal Structure of the Newsboy Problem | 100 |
| §29 | Exact Formulation | 104 |
| §30 | Overbooking | 111 |

CHAPTER 4: STOCHASTIC MODELS WITH CONTINUOUS REVIEW

| | | |
|-----|--|-----|
| §31 | Method of State Probabilities | 114 |
| §32 | Poisson Demand, Exponential Delivery Time | 119 |
| §33 | Poisson Demand, Fixed Delivery Time τ | 128 |
| §34 | Poisson Demand, Stochastic Delivery Time, Single Order | 137 |
| §35 | Poisson Demand, Stochastic Delivery Time, Multiple Orders | 142 |

CHAPTER 5: STOCHASTIC MODELS WITH PERIODIC REVIEW

| | | |
|-----|--------------------------------------|-----|
| §36 | The Arrow–Harris–Marschak Model | 147 |
| §37 | The AHM–Model in the Stationary Case | 151 |
| §38 | Standardization | 153 |
| §39 | Exponentially Distributed Demand | 155 |
| §40 | Optimality of the (s,S)–Policy | 161 |

| | | |
|-----|--|-----|
| §41 | Elimination of Proportional Ordering Costs with Finite Planning Horizon | 170 |
| §42 | Bounds for (s_n, S_n) | 174 |
| §43 | Optimality of the (s, S) -Policy in the Stationary Model | 186 |
| §44 | A Method for Computing s and S | 188 |
| §45 | AHM-Model with Delivery Time | 200 |
| §46 | Autocorrelated Demand | 208 |
| §47 | Inventory with Forecasting | 211 |

CHAPTER 6: NUMERICAL METHODS

| | | |
|-----|---|-----|
| §48 | Value Iteration | 218 |
| §49 | Policy Iteration | 230 |
| §50 | Bisection Method and Dynamic Programming | 236 |
| §51 | Computation of Optimal (s, S) -Policies according to Federgruen and Zipkin | 241 |

| | |
|-----------------|-----|
| CLOSING REMARKS | 245 |
|-----------------|-----|

| | |
|------------|-----|
| LITERATURE | 246 |
