1 Human Agency and the State of the Earth	1
Introduction	1
Can one conceive of ecosystems without human agents?	9
Human agency: individuals making a difference	13
Overwhelming evidence for concern with the condition of the Earth system	16
Looking back and looking forward	23
2 A Reminder: How Things Were. . . .	26
The study of human ecological relations	26
The contemporary study of environmental issues	32
The evolution of human–environment interactions	39
Hunter–gatherers: Setting our preferences	44
How did we decide to become farmers?	48
Herding and farming: An uneasy relationship	51
More food for the masses	53
3 The Great Forgetting	57
Earth transformations in prehistory	57
The archaeology of environmental change	65
The urban–industrial revolution and the unleashing of Prometheus	68
The contemporary situation: Human-dominated ecosystems	71

4	The Web of Life: Are We In It?	74
	The web of life and trophic relations: Thinking ecologically	74
	Ecosystem productivity and net primary production	80
	Land use and long term disturbance	83
5	What Makes People Do That?	93
	Learning, adaptation, and information	93
	Mitigation and the cautionary principle	102
	Transforming the face of the Earth: Making better decisions	103
	Population and the environment	106
6	Rebuilding Communities and Institutions	116
	Community in human evolution	116
	What is sacred in human evolution?	118
	Tragedies of the commons	121
	Institutions and self-organization	125
	Bioregionalism, deep ecology, and embedding people in nature	129
7	Can We Learn When We Have Enough?	131
	Material boys and material girls	131
	Patterns of consumption in developed countries	132
	Patterns of consumption in developing countries	138
	A feeding frenzy and a crisis in public health	142
	Burning fossil fuels instead of calories	145
	Do we have enough material goods now?	147
8	Quality of Life: When Less Is More	150
	Resource abundance versus resource scarcity	150
	When less is more	158
	The scale of the problem and the scale of the solution	166
	Restoring our balance: Valuing community and trust, rather than more “stuff”	170
	Are we happier when we have more?	175
	<i>References</i>	178
	<i>Index</i>	206

Figures

1.1	Highway gridlock	3
1.2	San hunter-gatherers with harvest	10
1.3	Rate of increase in many spheres of human activity for the last 300 years	17
1.4	Responses of the Earth system to increasing pressure from human activities	18
1.5	Oceanic conveyor belt	22
1.6	Vostock ice core	23
2.1	San hunter-gatherers carrying all their possessions	41
2.2	Human biological diversity in external physical traits	42
3.1	Maya ruins in forest of Belize	58
3.2	Pollution obscures the Hong Kong skyline	70
4.1	The web of life and the losses of energy at each level	75
4.2	a) Insect population exponential increases; b) Human population exponential increases	79
4.3	Climate and vegetation associations	84
4.4	Deforestation in the Amazon, 1978–2003	88
4.5	Landscape scale landcover in 1996	90
4.6	Crops and Terra Roxa soils	91
5.1	Information flow diagram	98
5.2	The demographic transition	108
5.3	Trends in total fertility rate (1950–2000)	110
5.4	Age-specific fertility by birth cohort, Altamira Survey	111

7.1	Comparison of 1950s homes and 2000 homes	133
8.1	Changes over time to Mt. Kilimanjaro	156
8.2	“Someday I want to be rich enough to get rid of everything and live like a monk”	159
8.3	The new American standard home, with a three-car garage	160
