Preface
Acknowledgments

Part I  Studying working families: an experiential approach

1  Why study working families?
   BARBARA SCHNEIDER AND LINDA J. WAITE  3

2  The design of the 500 Family Study
   LISA HOOGSTRA
   Commentary
   JOEL M. HEKTNER; JIRI ZUZANEK  39

Part II  Experiences at work and at home

   Overview
   JENNIFER HANIS-MARTIN  47

3  Spending time at work and at home: what workers do, how they feel about it, and how these emotions affect family life
   HOLLY R. SEXTON
   Commentary
   JERRY A. JACOBS; PATRICIA M. RASKIN  72

4  Women's intrinsic and extrinsic motivations for working
   SYLVIA MARTINEZ
   Commentary
   PHYLLIS MOEN  102
Contents

5 Momentary emotion and cortisol levels in the everyday lives of working parents 105
EMMA K. ADAM
Commentary 134
DOUGLAS A. GRANGER AND ELIZABETH A. SHIRTCRAFT

6 Emotional transmission between parents and adolescents: the importance of work characteristics and relationship quality 138
JENNIFER L. MATJASKO ANDAMY F. FELDMAN
Commentary 159
REED LARSON

Part III Marriage and family

Overview 167
ALISA C. LEWIN

7 The everyday emotional experiences of husbands and wives 169
CHI-YOUNG KOH
Commentary 190
ELAINE WETHINGTON; NORVAL D. GLENN

8 Couples making it happen: marital satisfaction and what works for highly satisfied couples 196
MARK R. NIELSEN
Commentary 217
WILLIAM J. DOHERTY; SCOTT M. STANLEY

Part IV Making it work at home

Overview 227
SHIRA OFFER

9 Measuring the gender gap in household labor: accurately estimating wives' and husbands' contributions 229
YUN-SUK LEE
Commentary 248
GLENNA SPITZE

10 A strategy for working families: high-level commodification of household services 252
CAROLYN P. STUENKEL
### Contents

**Commentary**  
**TOM FRICKE**

11 Television use and communication within families with adolescents  
**NICHOLAS P. DEMPSEY**  
Commentary  
**MIHALY CIKSZENTMATUSI; ROBERT KUBEY**

12 Religiosity, emotional well-being, and family processes in working families  
**JENNIFER A. SCHMIDT**  
Commentary  
**DON S. BROWNING**

### Part V Parenting and adolescent development

**Overview**  
**PHILLIP L. HAMMACK**

13 Adolescents’ assessments of parental role management in dual-earner families  
**ELAINE MARCHENA**  
Commentary  
**RENA L. REPETTI, TALI KLIMA, AND TAMAR KREMER-SADLIK**

14 Imagining family roles: parental influences on the expectations of adolescents in dual-earner families  
**MATTHEW N. WEINSHENKER**
Commentary  
**MICK CUNNINGHAM, JENNIFER GLASS**

15 Transmitting educational values: parent occupation and adolescent development  
**KIMBERLY S. MAIER**  
Commentary  
**JEYLAN T. MORTIMER**

16 Following in their parents’ footsteps: how characteristics of parental work predict adolescents’ interest in parents’ jobs  
**ARIEL KALIL, JUDITH A. LEVINE, AND KATHLEEN M. ZIOL-GUEST**  
Commentary  
**NANCY L. GALAMBOS**
Part VI  Lessons to be learned

17 Achieving work–life balance: strategies for dual-earner families
   KATHLEEN E. CHRISTENSEN

Technical appendices

Appendix A  Obtaining accurate measures of time use from the ESM
   JAE-GEA JEONG
   Commentary
   SUZANNE M. BIANCHI; KAZUO YAMAGUCHI

Appendix B  Estimating and imputing incomes for middle-class families
   YONA RUBINSTEIN AND CASEY B. MULLIGAN
   Commentary
   LARS LEFGREN; ROSS M. STOLZENBERG

Tables

2.1 Background and work characteristics of sampled parents
2.2 Comparison of the March 2000 CPS and 500 Family Study college-educated subsamples
2.3 Emotional states and personal well-being of sampled parents
2.4 Characteristics of sampled adolescents
2.5 Characteristics of sampled kindergarteners
3.1 Primary work tasks by occupation category
3.2 Means for the composite variables, positive affect, negative affect, engagement, and self-esteem, for different types of work
3.3 Means for the composite variables, positive affect, negative affect, engagement, and self-esteem, at work for individuals who are self-directed versus conforming in work orientation
4.1 Summary of variables
4.2 Intercorrelations among variables
4.3 Summary of logistic regression analyses predicting intrinsic and extrinsic motivation for women
4.4 Summary of logistic regression analyses predicting intrinsic and extrinsic motivation for men
5.1 Hierarchical Linear Model predicting parents’ cortisol levels from time of day and mood state factors (N = 101)
5.2 Hierarchical Linear Model predicting parents’ cortisol levels from time of day and feelings about activity factors (N = 101)
5.3 Associations between parents’ emotions, feelings about activities and location by parent gender, controlling for time of day
5.4 Associations between location and cortisol controlling for time of day and health variables (Model 1) as well as mood state and feelings about activity variables (Model 2)  
6.1 Multilevel crossover models – Time 2 adolescent emotion at home as a function of parent emotion at home (Level-2 coefficients)  
7.1 Factor loadings of composite measures  
7.2 Overall means and standard deviations of emotions during the week for husbands and wives  
7.3 Husbands’ and wives’ average emotions in different locations  
7.4 Husbands’ and wives’ average emotions with different companions  
7.5 Husbands’ and wives’ average emotions while engaged in different activities  
7.6 Differences in emotions of spouses by location  
7.7 Difference in emotions of spouses by companions  
8.1 Husband’s marital satisfaction and percent of wives who agree  
8.2 Mean couple scores by level of marital satisfaction (n = 330)  
8.3 Marital satisfaction and percent of relationship agreement for husbands and wives  
8.4 Marital satisfaction and ranking of marital areas by husbands and wives  
8.5 Depressive symptoms and self-esteem by marital satisfaction and gender  
8.6 Percent of husbands and wives who come home from work feeling exhausted, emotionally drained, and angry by level of marital satisfaction  
8.7 Ordered logistic regression of marital satisfaction on emotional well-being and years married for husbands and wives  
8.8 Ordered logistic regression of marital satisfaction on individual ratings of marital functioning for husbands and wives  
9.1 List of household tasks: survey and ESM  
9.2 Number of hours spent on housework per week: survey  
9.3 Number of hours spent on housework per week: the ESM
9.4 Number of hours spent on thinking about housework per week: the ESM

9.5 Estimates of number of hours spent on housework per week: survey and the ESM

11.1 Percent of time spent in secondary activities when television watching is the primary activity, by family member

11.2 Percent of time spent in secondary activities when interacting with family members is primary activity, by family member

11.3 Amount of time spent talking to other family members (summed proportion of primary and secondary activities), by family member by television use, with results of one-way ANOVAs

11.4 Regression of adolescents’ time spent talking to parents on family members’ time spent watching television, working, and parents’ experiences of parenting

11.5 Emotions when watching television and engaging in other leisure activities while talking with other family members, by family member

11.6 Emotions when watching television, with talking as primary or secondary activity, compared to exclusively watching television, by family member

12.1 Associations between maternal religiosity and maternal emotion

12.2 Associations between religiosity and adolescents’ emotion

12.3 Associations between maternal religiosity and parenting

12.4 Associations between religiosity and family dynamics

13.1 Variable descriptive statistics – mothers, fathers, and adolescents

13.2 Ordered probit models predicting mothers’ and fathers’ self-reported work-family role conflict (WFRC) from work and family characteristics – coefficients and changes in probabilities of predicting “high” conflict at the mean

13.3 Ordered probit models predicting adolescents’ assessments of mothers’ and fathers’ work-family role management (WFRM) – coefficients and changes in probabilities of predicting “excellent” assessment at the mean

14.1 Distribution of responses to family role expectation questions by gender of respondent
14.2 Means and standard deviations of independent variables 376
14.3 Logistic regression coefficients (expressed as odds ratios) from regressions predicting whether teenaged children of dual-earner parents expect to share tasks equally 377
15.1 Parental communication patterns with adolescents 405
15.2 Parental communication patterns with male and female adolescents 406
15.3 Mean of perceived challenge and support by adolescent gender 407
15.4 Unstandardized coefficients from logistic regression analyses of adolescent grades and graduate school aspirations 409
15.5 Regression coefficients from linear analysis of support and challenge 410
15.6 Results of hierarchical measurement modeling for mood 412
15.7 Results of hierarchical measurement modeling for self-esteem 413
15.8 Results of hierarchical measurement modeling for motivation 413
16.1 Descriptive statistics of all study variables 432
16.2 Bivariate correlations for all study variables 433
16.3 Ordered probit estimates for wanting a job like mother 434
16.4 Ordered probit estimates for wanting a job like father 436
A.1 Mean number of ESM responses by race, educational level, and gender 468
A.2 Unstandardized regression coefficients for the effect of time, place, activity, and psychological state factors on response rates (%) 471
A.3 Examples of procedures used in assigning weights 478
B.1 The current population survey data: 1999 through 2001 495
B.2 Distribution of annual earnings: married men and women, 16 through 65 years of age 495
B.3 Imputing wages 500
