<i>List of Tables and Figures</i>	vii
<i>Notes on Contributors</i>	ix
1 Models, Methodologies, and Metaphors on the Move <i>Andreas Wimmer</i>	1
<b>Part I Chaos and Order in Climate Change</b>	
2 Climate Change: Complexity, Chaos and Order <i>Paul Higgins</i>	37
3 Chaos in Social Systems: Assessment and Relevance <i>L. Douglas Kiel</i>	51
4 Economics, Chaos and Environmental Complexity <i>Hans-Walter Lorenz</i>	59
<b>Part II Genetic Variation in Evolution</b>	
5 The Topology of the Possible <i>Walter Fontana</i>	67
6 Neutrality as a Paradigm of Change <i>Rudolf Stichweh</i>	85
7 Using Evolutionary Analogies in Social Science: Two Case Studies <i>Edmund Chattoe</i>	89
<b>Part III Economics of Continuity: Path Dependency</b>	
8 The Grip of History and the Scope for Novelty: Some Results and Open Questions on Path Dependence in Economic Processes <i>Carolina Castaldi and Giovanni Dosi</i>	99
9 Analyzing Path Dependence: Lessons from the Social Sciences <i>James Mahoney</i>	129
10 Path Dependence and Historical Contingency in Biology <i>Eörs Szathmáry</i>	140

**Part IV Institutional Inertia**

- 11 The New Institutional Economics: Can It Deliver for Change  
and Development? 161  
*Jeffrey B. Nugent*
- 12 Institutions, Politics and Culture: A Case for 'Old'  
Institutionalism in the Study of Historical Change 177  
*John Harriss*
- 13 Exporting Metaphors, Concepts and Methods from the  
Natural Sciences to the Social Sciences and *vice versa* 187  
*Raghavendra Gadagkar*

**Part V The Multilinear Modernization of Societies**

- 14 Multiple Modernities in the Framework of a Comparative  
Evolutionary Perspective 199  
*Samuel N. Eisenstadt*
- 15 On Modernity and Wellbeing 219  
*Oded Stark*
- 16 Multiplicity in Non-Linear Systems 222  
*Somdatta Sinha*

**Part VI Constellations of Contingency: Political History**

- 17 Historical-Institutionalism in Political Science and the  
Problem of Change 237  
*Ellen M. Immergut*
- 18 Social Science and History: How Predictable Is Political Behavior? 260  
*Roger D. Congleton*
- 19 Reconstructing Change in Historical Systems:  
Are There Commonalties Between Evolutionary  
Biology and the Humanities? 270  
*Joel Cracraft*
- 20 History, Uncertainty, and Disciplinary Difference:  
Concluding Observations by a Social Scientist 285  
*Reinhart Kössler*

*Index* 303

# List of Tables and Figures

## Tables

10.1	Examples of social learning	147
10.2	The major transitions in evolution	150
15.1		220
15.2		220

## Figures

1.1	A basic transition probability matrix	10
1.2	Contingency	11
1.3	Transformation	12
1.4	History I: event chains	13
1.5	History II: path dependency	14
2.1	Schematic bifurcation diagram for thermohaline circulation as measured by North Atlantic Deep Water (NADW) production in Sverdrups	42
2.2	Equilibrium results of a simple climate model under different forcing scenarios	43
2.3	Model response of the coupled atmosphere–biosphere system to vegetation perturbations for the Sahel and starting from a vegetation distribution for West Africa close to today's	44
2.4	Sensitivity of modelled biome distributions to initial vegetation	45
5.1	The folding of RNA sequences into shapes as a proxy of a genotype–phenotype map	68
5.2	RNA shape	70
5.3	Epistasis	72
5.4	Sequence space for sequences of length 4 over the binary alphabet $\{0,1\}$	73
5.5	Neutral networks and shape space topology	75
5.6	A: An example of a discontinuous shape transformation RNA; B: Punctuation in evolving RNA populations	78
8.1	The Fujiyama single-peaked fitness landscape	104
8.2	A fitness landscape with several local maxima peaks (Schwefel's function)	105
8.3	A non-linear transition function that implies multiple steady states	110

9.1	Illustration of contingency in self-reinforcing sequence	134
10.1	The formose 'reaction', which is, in fact, a complex network of autocatalytic sugar formation. (a) The 'spontaneous generation' of the autocatalytic seed is a very slow process; and (b) the autocatalytic core of the network. Each circle represents a group with one carbon atom	144
10.2	DNA methylation as a chromatin marking system	146
10.3	Memes and Lamarckian inheritance. (a) The Weissmanist segregation of soma and germ line; (b) transfer of memes passes through the performance level, which is mostly absent in the molecular world; and (c) in most cases a meme becomes multiplied by the interactions of two memes	148
10.4	Schematic evolution of ECP and EDN proteins	150
10.5	The radiation of Mexican salamanders	154
16.1	Processes involved in the evolution of a complex system	224
16.2	Structure and dynamical behaviour: (a) logistic; and (b) exponential maps	226
16.3	Structure and dynamics of Lorenz system	227
16.4	Dynamics of (a) logistic; and (b) exponential maps under external perturbation	228
16.5	Dynamics of H and P when external perturbation is applied to (a) H, (b) P, and (c) to both H and P	229
16.6	Paradigms of evolutionary change	230
17.1	First chamber real and counterfactual results, 1911-94	250
18.1	How predictable?	263
19.1	A simplified causal nexus for the origin of a species	278
