Introduction

Selected research topics

Bronchodilator drugs in asthma	4
<i>Asthma, which is very prevalent in the Australian community, is under investigation at the University of Queensland.</i>	
Stability of the lung	5
<i>The manufacture of surfactant, a unique lipoprotein lining of the lung, is studied at Flinders University.</i>	
Auditory biophysics research	6
<i>The function of the inner ear is studied at the University of Western Australia.</i>	
Implantable hearing prosthesis	9
<i>At the University of Melbourne an implantable hearing prosthesis is being developed.</i>	
The chemical synthesis of relaxin	11
<i>The chemical synthesis of relaxin and its role during pregnancy is a subject of research at the Howard Florey Institute.</i>	
Small blood vessels in the lining of the stomach	12
<i>An important clue as to how the stomach lining protects itself and prevents ulceration has been discovered at the Flinders University.</i>	
Epidemiology of arthropod-borne virus infections	14
<i>The Queensland Institute of Medical Research is studying the epidemiology of medically-important arthropod-borne virus infections.</i>	
Genetic markers and dengue virus strains	16
<i>The virology unit at the Queensland Institute of Medical Research has made a study of genetic markers to differentiate dengue virus strains.</i>	
Hepatitis B virus and chronic liver disease	17
<i>Hepatitis B virus is one of a variety of viruses which may infect the liver and has been of particular interest to researchers at the University of Adelaide.</i>	
Hormone control of growth and function of cancers	18
<i>Researchers from the University of Melbourne have found that studies of growth in both normal and malignant cells are essential to the understanding of tumour cell biology.</i>	
Drug resistance in cancer	20
<i>Research into the properties of human melanoma cells is being conducted at the Queensland Institute of Medical Research.</i>	
Rhythm of breathing in the newborn	20
<i>At the King Edward Memorial Hospital, Perth, an analysis is being made of the rhythm of breathing of the newborn.</i>	
Scientific drug treatment of epilepsy	21
<i>An attempt to make the drug treatment of epilepsy more effective is being made at the University of Queensland.</i>	
The mechanism of hardening of dental amalgam	22
<i>The way in which mercury reacts with alloy to form amalgam is being examined at the University of Adelaide.</i>	

Research on cardiovascular disease	24
<i>Disorders of the cardiovascular system, major health problems in the Australian community, are being researched at the Royal Prince Alfred Hospital in Sydney.</i>	

Inborn errors of metabolism	25
<i>The application of GC-MS and related techniques to the study of inborn errors of metabolism has been a co-operative effort of the University of Wollongong and the Royal Children's Hospital in Melbourne.</i>	

Appendixes

i Appropriation to Medical Research Endowment Fund 1937-82	27
ii Summary of research projects supported in 1981	28
iii Development grants 1981	70
iv Program grants 1981	71
v Support for research institutes for 1981	72
vi Support of research units, Fellows and special investigations in 1981	78
vii Medical and dental postgraduate research scholarships for 1981	81
viii Biomedical postgraduate scholarships for 1981	87
ix Australian and overseas post-doctoral fellowships for 1981	89
x NH & MRC Research Associates in allergic diseases for 1981	94
xi Public health travelling fellowships for 1981	95
xii Medical research grants	96
