Chapter 1 Aspects of health-related aerosols	1
<i>James W. Gentry</i>	
Chapter 2 Aerosol properties	19
<i>William C. Hinds</i>	
Chapter 3 Advances in monitoring methods for airborne particles	35
<i>Philip K. Hopke</i>	
Chapter 4 Ultrafine and nanoparticle emissions: A new challenge for internal combustion engine designers	47
<i>D. B. Kittelson, W.F. Watts, and J.P. Johnson</i>	
Chapter 5 Breathing zone exposure assessment	61
<i>Charles E. Rodes and Jonathan W. Thornburg</i>	
Chapter 6 Mechanisms of particle deposition	75
<i>Kristin K. Isaacs, Jacky A. Rosati, and Ted B. Martonen</i>	
Chapter 7 Aerosol dose	101
<i>Lev S. Ruzer, Michael G. Apte, and Richard G. Sextro</i>	
Chapter 8 Modeling deposition of inhaled particles	113
<i>Ted B. Martonen, Jacky A. Rosati, and Kristin K. Isaacs</i>	
Chapter 9 Assessing uncertainties in the relationship between inhaled particle concentrations, internal deposition, and health effects	157
<i>Phillip N. Price</i>	
Chapter 10 Aerosol chemistry and physics: Indoor perspective	189
<i>Lara A. Gundel and Richard G. Sextro</i>	
Chapter 11 Aerosols in the industrial environment	225
<i>Andrew D. Maynard and Paul A. Baron</i>	
Chapter 12 Medical and pharmaceutical aerosols	265
<i>Hugh D.C. Smyth, Lucila Garcia-Contreras, Daniel J. Cooney, Robert J. Garmise, Latarsha D. Jones, and Anthony J. Hickey</i>	
Chapter 13 Bioaerosols	291
<i>Maire S.A. Heikkinen, Mervi K. Hjelmroos-Koski, Max M. Häggblom, and Janet M. Macher</i>	
Chapter 14 Radioactive aerosols	343
<i>Lev S. Ruzer</i>	

Chapter 15	Dosimetry and epidemiology of Russian uranium mines*	503
	<i>I.V. Pavlov</i>	
Chapter 16	Radioactive aerosols of the Chernobyl accident*	517
	<i>A.K. Budyka and B.I. Ogorodnikov</i>	
Chapter 17	Aerosol filtration (aerosol sampling by fibrous filters)*	541
	<i>A.K. Budyka and B.I. Ogorodnikov</i>	
Chapter 18	Radioactive aerosol standards	557
	<i>L.S. Ruzer, Yu.V. Kuznetsov, V.L. Kustova, D.E. Fertman, and A.J. Rizin</i>	
Chapter 19	Radon and thoron in the environment: Concentrations and lung cancer risk	569
	<i>Naomi H. Harley</i>	
Chapter 20	Risk from inhalation of the long-lived radionuclides uranium, thorium, and fallout plutonium in the atmosphere	585
	<i>Isabel M. Fisenne</i>	
Chapter 21	Health physics considerations of aerosols in radiosynthesis laboratories	595
	<i>Mark L. Maiello</i>	
Chapter 22	Diesel exhaust	601
	<i>Jonathan M. Samet</i>	
Chapter 23	Health effects of ambient ultrafine particles	607
	<i>Beverly S. Cohen</i>	
Chapter 24	Health effects of aerosols: Mechanisms and epidemiology	619
	<i>Ira B. Tager</i>	
Index		697

*Chapter translated from original Russian by Lev S. Ruzer

chapter one

Aspects of health-related aerosols

James W. Gentry
University of Maryland

Contents

1.1	Overview.....	1
1.2	Total deposition	1
1.3	Regional deposition measurements and mucociliary clearance	4
1.4	Composition of aerosols	6
1.5	Principal laboratories	9
1.6	Journals and organizations.....	11
1.7	Awards	12
	References	13

chapter two

Aerosol properties

William C. Hinds
UCLA School of Public Health

Contents

2.1	Introduction	19
2.1.1	Concentration	21
2.2	Basic particle properties	21
2.2.1	Particle size	21
2.2.2	Particle density	23
2.2.3	Particle shape.....	24
2.3	Kinetic properties of aerosols	24
2.3.1	Mechanical	24
2.3.1.1	Settling velocity	24
2.3.1.2	Inertial	26
2.3.1.3	Diffusion	26
2.3.2	Electrical.....	27
2.3.3	Optical	27
2.3.4	Growth processes	29
2.3.4.1	Coagulation.....	29
2.3.4.2	Condensation	29
2.4	Chemical properties	30
2.5	Atmospheric particle size ranges	32
	Glossary	32
	References	33

chapter three

Advances in monitoring methods for airborne particles

Philip K. Hopke
Clarkson University

Contents

3.1	Introduction	35
3.2	Filter-based measurements	36
3.2.1	Mass	36
3.2.1.1	Fine particles	36
3.2.1.2	Coarse particles.....	37
3.2.2	Continuous mass measurements	38
3.2.2.1	Fine particles	38
3.2.2.2	Coarse particles.....	40
3.3	Particulate constituent measurements, fixed site	40
3.3.1	Filter-based integrated monitors	40
3.3.2	Continuous monitors	41
3.4	Supersites	44
3.5	Next steps	45
3.6	Conclusions	45
	References	45

chapter four

Ultrafine and nanoparticle emissions: A new challenge for internal combustion engine designers

D. B. Kittelson, W.F. Watts, and J.P. Johnson

*Department of Mechanical Engineering
University of Minnesota*

Contents

4.1	Introduction	47
4.2	Measurement of size and composition of diesel particles	49
4.2.1	Sampling issues.....	49
4.2.2	On-road and laboratory measurements of diesel particles	50
4.2.3	Particle structure and composition measurements	52
4.2.4	Particles from engines equipped with exhaust filters.....	55
4.3	Some future engine design issues.....	56
4.4	Discussion and conclusions	58
	References	58

chapter five

Breathing zone exposure assessment

Charles E. Rodes and Jonathan W. Thornburg
RTI International

Contents

5.1	General sampling.....	61
5.1.1	Exposure assessment	61
5.1.2	Concentrations vs. personal exposures	62
5.1.3	Breathing zone exposures	63
5.1.3.1	Defining the breathing zone	64
5.1.3.2	Bluff body bias	67
5.1.4	BZE sampling applications	69
5.1.5	BZE sampling compliance.....	70
5.2	Sampling by contaminant type	70
	References	71

chapter six

Mechanisms of particle deposition

Kristin K. Isaacs

University of North Carolina at Chapel Hill

Jacky A. Rosati

U.S. EPA, National Risk Management Research Laboratory

Ted B. Martonen

U.S. EPA, National Health and Environmental Effects Laboratory and University of North Carolina at Chapel Hill

Contents

6.1 Introduction76
6.2 Fundamentals of inhaled aerosols76
6.2.1 Stokes's law76
6.2.2 Terminal settling velocity and relaxation time.....77
6.2.3 Aerodynamic diameter77
6.2.4 Modifications to the aerodynamic equations77
6.2.4.1 Correction for nonspherical particles78
6.2.4.2 Correction for slip78
6.2.4.3 Hygroscopicity79
6.3 Domains of particle dynamics.....81
6.3.1 Free-molecule regime81
6.3.2 Continuum regime81
6.3.3 Slip-flow regime81
6.4 Fluid dynamics in airways.....82
6.4.1 Fundamentals of flow82
6.4.1.1 Steady vs. unsteady flow82
6.4.1.2 Laminar vs. turbulent flow82
6.4.2 Flow in idealized tubes83
6.4.3 Flow in curved tubes85
6.4.4 Flow in bifurcations and branching networks85
6.5 Particle motion.....86
6.5.1 Primary deposition mechanisms86
6.5.1.1 Inertial impaction87
6.5.1.1.1 Laminar conditions88
6.5.1.1.2 Turbulent conditions88
6.5.1.2 Sedimentation88
6.5.1.2.1 Laminar conditions88
6.5.1.2.2 Turbulent conditions89

6.5.1.3	Diffusion	89
6.5.1.3.1	Laminar conditions	89
6.5.1.3.2	Turbulent conditions	89
6.5.2	Secondary deposition mechanisms	90
6.5.2.1	Interception	90
6.5.2.1.1	Laminar conditions	90
6.5.2.1.2	Turbulent conditions	91
6.5.2.2	Electrostatic charge.....	91
6.5.2.3	Cloud motion	92
6.6	Conclusions	93
	Nomenclature	93
	Disclaimer	94
	Acknowledgement	94
	References	95

chapter seven

Aerosol dose

Lev S. Ruzer, Michael G. Apte, and Richard G. Sextro
Lawrence Berkley National Laboratory

Contents

7.1	Introduction	101
7.2	Environmental dosimetry.....	102
7.3	Exposure and dose definitions	104
7.4	Uncertainty in dose assessment	105
7.5	Aerosol concentration safety standards	106
7.6	Nonuniformity of deposition and ultrafine/nanometer-sized particles	106
7.7	Characteristics of nanometer particles	108
7.8	Experimental data on nanometer particles	108
7.9	Radioactive markers	109
7.10	Conclusion	109
	References	110

chapter eight

Modeling deposition of inhaled particles

Ted B. Martonen

U.S. EPA, National Health and Environmental Effects Laboratory and University of North Carolina at Chapel Hill

Jacky A. Rosati

U.S. EPA, National Risk Management Research Laboratory

Kristin K. Isaacs

University of North Carolina at Chapel Hill

Contents

8.1	Introduction	114
8.2	Fluid dynamics in airways	115
8.2.1	Fundamental equations	115
8.2.2	Boundary conditions	116
8.2.3	Idealized velocity profiles	116
8.2.4	Computational fluid dynamics	117
8.3	Aerosol deposition models	117
8.3.1	Classes of models	117
8.3.1.1	Empirical models	118
8.3.1.2	Deterministic models	118
8.3.1.3	Stochastic models	119
8.3.1.4	Computational fluid-particle dynamics	119
8.3.2	Merits and limitations of deposition models	120
8.3.2.1	Scientific foundations	121
8.3.2.2	Biological realism	121
8.3.2.3	Hardware and software issues	121
8.3.2.4	Advantages of modeling and simulation	122
8.4	Factors influencing aerosol deposition patterns	122
8.4.1	Respiratory system morphology	122
8.4.1.1	Idealized models	122
8.4.1.2	Data-driven models	123
8.4.1.3	Surface features	123
8.4.2	Ventilatory conditions	125
8.4.2.1	Mode of respiration	125
8.4.2.1.1	Effect of oral or nasal breathing on particle delivery to lungs	125
8.4.2.1.2	Effect of oral or nasal breathing on total particle deposition within the respiratory tract	125

8.4.2.2	Breathing pattern	125
8.4.2.2.1	Spontaneous breathing	126
8.4.2.2.2	Regulated breathing	126
8.4.3	Respiratory system environment	126
8.4.4	Clearance	128
8.4.4.1	Mucociliary clearance	128
8.4.4.1.1	Effect of drugs and inhaled contaminants on mucociliary clearance	128
8.4.4.1.2	Effect of disease on mucociliary clearance	129
8.4.4.1.3	Effect of age and activity on mucociliary clearance.....	130
8.4.4.2	Macrophage clearance or phagocytosis	130
8.4.4.2.1	Effect of particle size/fiber length and shape on macrophage clearance.....	130
8.4.4.2.2	Effect of drugs and inhaled contaminants on macrophage clearance	130
8.4.4.3	Free particle uptake and translocation to the interstitium	131
8.4.4.4	Importance of clearance in particle deposition modeling	131
8.4.5	Disease	131
8.4.5.1	Chronic obstructive pulmonary disease	131
8.4.5.2	Asthma	132
8.4.5.3	Cystic fibrosis	132
8.4.5.4	Effect of obstructive disease on particle deposition and distribution	132
8.4.5.5	Modeling disease	132
8.4.6	Age	133
8.5	Theory and experiment	133
8.5.1	Predictions of particle deposition	133
8.5.2	Particle deposition measurements	134
8.5.2.1	Casts and models	134
8.5.2.2	Deposition patterns deduced from clearance studies	135
8.5.2.3	Light-scattering methods	135
8.5.2.4	Gamma scintigraphy	135
8.5.2.5	Microdosimetry	136
8.5.3	Comparison of modeling and data	139
8.5.3.1	Simulations of compartmental particle deposition	140
8.5.3.1.1	Extrathoracic.....	140
8.5.3.1.2	Tracheobronchial	140
8.5.3.1.3	Pulmonary	142
8.5.3.2	Simulations of particle distribution generation by generation	143
8.5.3.3	Simulations of local particle deposition	144
8.6	Summary	145
	Disclaimer	145
	Acknowledgment	145
	References	145

chapter nine

Assessing uncertainties in the relationship between inhaled particle concentrations, internal deposition, and health effects

Phillip N. Price

Lawrence Berkeley National Laboratory

Contents

9.1	Introduction	158
9.1.1	Should we worry about dose or about exposure?.....	158
9.2	Epidemiological studies	160
9.2.1	Radon epidemiology	161
9.2.1.1	Background	161
9.2.1.2	Case-control studies of residential radon	162
9.2.1.3	Sources of error in exposure estimates in case-control studies of residential radon.....	164
9.2.1.4	Ecological studies of residential radon	165
9.2.1.5	Discussion of radon risk estimates	166
9.2.1.6	Implications for other aerosol exposure problems	168
9.2.2	Epidemiological studies of the effects of fine particle inhalation	169
9.2.2.1	Time-series studies of the health effects of fine particles.....	169
9.2.2.2	Cohort studies of the health effects of fine particle inhalation	171
9.2.2.3	Ecological epidemiological studies of the health effects of fine particle inhalation.....	171
9.3	Inhalation modeling and experiments	172
9.3.1	Motivation for experiments and modeling related to lung deposition of aerosols	172
9.3.2	Assessing uncertainties	172
9.3.3	General approach to assessing the effects of interpersonal variability	174
9.3.4	Respiratory tract morphology and other factors such as medical condition.....	175
9.3.5	Intersubject morphometric variability.....	175
9.3.6	Systematic morphometric variability	177
9.3.7	Breathing rate and inhalation details	178
9.3.8	Clearance of the lung	178
9.3.9	Estimating the dose-versus-exposure relationship in a population	180
9.4	Conclusion	182
	Acknowledgments	183
	References	183

chapter ten

Aerosol chemistry and physics: Indoor perspective

Lara A. Gundel and Richard G. Sextro
Environmental Energy Technologies Division

Contents

Preface	190
10.1 Introduction	191
10.1.1 Importance of aerosol exposures	191
10.1.2 Significance of indoor environment to aerosol exposure	191
10.1.3 Outdoor particles	192
10.1.3.1 PM _{2.5} composition overview	192
10.1.3.2 PM _{2.5} source apportionment	192
10.1.4 Differences between indoor and outdoor environments	193
10.1.5 Evidence for indoor aerosol processing and generation	194
10.1.5.1 The building envelope	194
10.1.5.2 Indoor materials	195
10.1.5.3 Indoor aerosol generation	195
10.2 Composition of indoor particles and aerosol precursors	196
10.2.1 Combustion sources	196
10.2.1.1 Cooking with oils and meat	196
10.2.1.2 Fireplaces	199
10.2.1.3 Tobacco	200
10.2.1.4 Candles	201
10.2.1.5 Incense	201
10.2.1.6 Unvented kerosene heaters	202
10.2.2 Human activities and consumer products	202
10.2.2.1 Pesticides	202
10.2.2.2 Air fresheners	202
10.2.2.3 Walking	202
10.2.2.4 Cleaning	203
10.2.2.5 Cleaning products	203
10.2.2.6 Renovation	204
10.2.3 Indoor aerosol source apportionment	204
10.3 Physical properties of indoor aerosols	205
10.3.1 Size distributions	205
10.3.1.1 Number	206
10.3.1.2 Surface area	206
10.3.1.3 Volume and mass	206

10.3.2	Particle dynamics	208
10.3.2.1	Particle motion	208
10.3.2.2	Particle formation and phase partitioning	209
10.3.2.2.1	Nucleation.....	209
10.3.2.2.2	Condensation	209
10.3.2.2.3	Sorption/desorption	209
10.3.3	Surface area in the indoor environment	211
10.3.3.1	Particles	211
10.3.3.2	Indoor materials	211
10.3.3.3	Adsorption indoors	211
10.4	Fate and transport	213
10.4.1	Model of indoor aerosol behavior	213
10.4.2	Airflow and aerosol transport through penetrations in building envelopes ..	215
10.4.3	Indoor aerosol deposition rates	216
10.4.4	Resuspension rate of particles on carpets/floors	217
References	218

chapter eleven

Aerosols in the industrial environment

Andrew D. Maynard and Paul A. Baron

National Institute for Occupational Safety and Health

Contents

11.1 Introduction	225
11.2 Exposure metrics	228
11.3 Size-selective sampling	229
11.4 Exposure regulations	232
11.5 Measurement technologies.....	232
11.5.1 Samplers	232
11.5.1.1 General aerosol samplers	233
11.5.1.2 Inhalable samplers	236
11.5.1.3 Thoracic samplers.....	237
11.5.1.4 Respirable samplers	241
11.5.1.5 Multifraction samplers	242
11.5.1.6 Sample analysis	246
11.5.2 Direct reading instruments	248
11.5.2.1 Personal exposure measurements	248
11.5.2.2 Light scattering instruments.....	248
11.5.2.2.1 Optical particle counters	249
11.5.2.2.2 Photometers	251
11.5.2.3 Tapered element oscillating microbalance	252
11.5.2.4 Condensation particle counter	253
11.5.2.5 Pressure drop sensor	253
11.5.2.6 Aerosol surface area measurement	254
11.5.2.7 Specific applications of direct-reading instruments	255
11.5.2.7.1 Sampling cassette leakage testing.....	255
11.5.2.7.2 Respirator testing.....	255
11.5.2.7.3 Sampler testing	256
11.5.2.7.4 Combined aerosol and video monitoring	257
11.6 Summary.....	258
Disclaimer	258
References	258

chapter twelve

Medical and pharmaceutical aerosols

Hugh D.C. Smyth, Lucila Garcia-Contreras, Daniel J. Cooney, Robert J. Garmise, Latarsha D. Jones, and Anthony J. Hickey
University of North Carolina

Contents

12.1	Introduction	266
12.1.1	Historical perspective.....	266
12.1.2	Future prospects	266
12.2	Therapeutic agents	266
12.2.1	Locally acting medical and pharmaceutical aerosols	266
12.2.1.1	β -Adrenergic agonists	266
12.2.1.2	Corticosteroids	267
12.2.1.3	Anticholinergics	268
12.2.1.4	Antiinflammatory agents	268
12.2.1.5	Antimicrobials.....	268
12.2.1.6	Biotechnological agents, genes, and DNA aerosols	268
12.2.2	Systemically acting agents.....	269
12.3	Classification	269
12.3.1	Metered dose inhalers	269
12.3.1.1	CFC systems	270
12.3.1.2	HFC systems	270
12.3.1.3	Alternative propellants	270
12.3.2	Dry powder inhalers	272
12.3.2.1	Passive	272
12.3.2.2	Active	273
12.3.3	Nebulizers	274
12.3.3.1	Solutions	274
12.3.3.2	Suspensions	275
12.3.3.3	Macromolecules	275
12.3.4	Handheld aqueous systems	276
12.3.5	Topical drug delivery sprays	276
12.3.6	Specific measurement techniques and calibration.....	277
12.3.6.1	Particle size measurement.....	277
12.4	Specific measurement techniques and calibration	277
12.4.1	Inertial methods	277
12.4.1.1	Cascade impactor	277
12.4.1.2	Twin impinger.....	279
12.4.2	Optical methods	280

12.4.3	Other <i>in vitro</i> measurement techniques commonly employed for pharmaceutical aerosols.....	280
12.5	Respiratory deposition, retention, and dosimetry	280
12.5.1	Deposition	280
12.5.1.1	Gamma scintigraphy, PET, and SPECT.....	280
12.5.2	Retention	281
12.5.3	Dosimetry.....	281
12.5.3.1	Bolus delivery	282
12.5.3.2	Continuous delivery	282

chapter thirteen

Bioaerosols

Maire S.A. Heikkinen

New York University

Mervi K. Hjelmroos-Koski

University of California at Berkeley

Max M. Häggblom

Rutgers University

Janet M. Macher

California Department of Health Services

Contents

13.1 Introduction	292
13.1.1 Health effects of bioaerosols in indoor and outdoor environments	293
13.1.1.1 Infectious diseases	293
13.1.1.2 Hypersensitivity diseases	294
13.1.1.3 Inflammatory and other diseases	295
13.1.2 Sources and transmission	304
13.1.2.1 Transmission of infectious agents	304
13.1.2.2 Bioaerosols from outdoor sources	304
13.1.2.3 Bioaerosols in manufacturing industries	305
13.2 Bioaerosol size distributions	306
13.2.1 Aerodynamic diameters of airborne biological agents	306
13.2.1.1 Allergens	307
13.2.1.2 Culturable bacteria and fungi	307
13.2.1.3 Fragments	308
13.2.2 Seasonal and diurnal variability in ambient bioaerosol concentrations	308
13.2.2.1 Time of day	313
13.2.2.2 Time of year	313
13.2.2.3 Geographic region	313
13.3 Respiratory dosimetry	314
13.3.1 Respiratory deposition and clearance	314
13.3.2 Dose-response relationships/exposure assessment	316
13.3.2.1 Infectious dose	316
13.3.2.2 Allergens	317
13.3.2.3 Glucan	318
13.3.2.4 Endotoxin	319

13.3.2.5 Other bioaerosol exposures	320
13.3.2.6 Interactions	321
13.4 Environmental measurement and analytical techniques	321
13.4.1 Measurement of surrogates and indicators	321
13.4.2 Bioaerosol measurement	323
13.4.3 Bioaerosol samplers	324
13.4.3.1 Inertial sampling	324
13.4.3.2 Filtration	325
13.4.3.3 Electrostatic precipitation	325
13.4.3.4 Future directions in bioaerosol sampling	326
13.4.4 Sample analysis	326
13.4.4.1 Microscopy	326
13.4.4.2 Cultivation-based methods for bacteria and fungi	327
13.4.4.3 Biological assays	328
13.4.4.4 Immunoassays	329
13.4.4.5 Chemical assays	329
13.4.4.6 Molecular genetic assays.....	330
13.5 Concluding remarks	330
References	331

chapter fourteen

Radioactive aerosols

Lev S. Ruzer

Lawrence Berkeley National Laboratory

Contents

14.1	Historical overview.....	345
14.2	The Aerosol Laboratory of the All-Union Institute of Physico-Technical and Radiotechnical Institute (VNIIFTRI) in Moscow (former U.S.S.R.).....	346
14.3	Reported uncertainties in the exposure of miners (some BEIR VI remarks).....	346
14.4	Direct measurement of activity in the lungs: Problems with practical application.....	348
14.5	Personal experience	348
14.6	Geography and underground conditions of mine regions.....	350
14.7	Diversity of mining and working conditions	351
14.8	Direct method: The Tadjikistan study as an opportunity to reduce lung dosimetric uncertainty	352
14.9	Radioactive aerosols and lung irradiation	354
14.10	Aerosol concentration measurement	358
14.10.1	Radon and its contribution to absorbed dose	358
14.10.1.1	Experimental study on animals	358
14.10.1.2	Methods and measurement techniques for air radon concentration monitoring	361
14.10.1.3	Radon concentration distribution measurement	362
14.10.1.4	Radon and lung cancer	363
14.10.2	Measurement of the concentration of decay products of radon, thoran, and actinon	364
14.10.2.1	Characteristics of radon progeny	364
14.10.2.2	Basic equations for radon decay product series	366
14.10.2.3	General activity methods of measuring the concentration of radon decay products	370
14.10.2.4	Measurement of radon decay products in air by alpha- and beta-spectrometry	373
14.10.2.4.1	Measurement procedure and experimental results	374
14.10.2.5	Absorption of alpha-radiation in the sample	377
14.10.2.6	Measurement procedures for the determination of the activity of RaA, RaB, RaC, and RaC' on the filter by alpha- and beta-spectrometry	381
14.10.2.6.1	^{218}Po (RaA) activity measurement	381
14.10.2.6.2	^{214}Po (RaC') activity measurement	382

14.10.2.6.3	²¹⁴ Pb (RaC) activity measurement	382
14.10.2.6.4	²¹⁴ Bi (RaB) activity measurement	382
14.10.2.7	Other methods of determination of the radon decay products concentration in air	383
14.10.2.7.1	Radon progeny concentration measurement	385
14.10.2.7.2	Equilibrium factor and unattached fraction of radon progeny	386
14.10.2.8	Methodical errors in the RaA, RaB, and RaC concentrations measurement	387
14.10.2.9	Characteristics of thoron and actinon decay products	390
14.10.2.10	Basic equations for the thoron and actinon series	390
14.10.2.10.1	Actinon series	391
14.10.11	Unattached fraction measurements	395
14.10.11.1	Correlation between the unattached activity of radon decay products and aerosol concentration	395
14.10.11.2	Measurements of other radon decay product unattached activity concentrations	401
14.10.11.3	Effect of recoil nuclei being knocked off aerosol particle unattached concentrations of radon-decay products	402
14.10.12	Measurement of artificial radioactive aerosol concentration	406
14.10.12.1	Measurement technique for artificial aerosol concentration measurements	409
14.10.12.2	Artificial radioactive aerosol concentration measurement	416
14.10.13	Aerosol particle size measurements	417
14.10.13.1	Concept of the scale of particle size of aerosols	417
14.10.13.2	Ultrafine aerosols	420
14.10.13.3	Portable instrument for measuring UFA in mines	422
14.10.13.4	Installation for generating and investigating aerosols in the range of 2×10^{-3} to $1 \mu\text{m}$	422
14.10.13.4.1	Method for investigating aerosols	427
14.10.13.4.2	Experimental results of the study of UFA aerosol generator	428
14.10.13.4.3	Measurement errors	430
14.10.13.5	Diffusive particle deposition in the inlet segment of a tube	431
14.10.13.6	Errors in determination of the parameters of the logarithmically normal size distribution of aerosol particles by the diffusion method	434
14.10.13.7	Fine aerosols	436
14.10.13.7.1	Determining the composition of aerosols by means of two mean radii	438
14.10.13.8	Standard for generating and measuring the electrical properties of aerosols	439
14.10.13.8.1	Generators of aeroions and electroaerosols	439
14.10.13.8.2	Method and instrumentation for the measurement of electrical parameters of radioactive UFA	440
14.11	Dosimetry	441
14.11.1	Intake vs. exposure: Propagation of the uncertainties in dose assessment in mining studies	441
14.11.1.1	Discussion on miner radiation dosimetry: Quantitative approach	442

14.11.2	Measurements of the dosimetric parameters	445
14.11.2.1	Radon measurements.....	445
14.11.2.2	Radon decay progeny measurements	447
14.11.2.3	Distribution of radon decay product concentration	448
14.11.2.4	Unattached fraction measurements	450
14.11.2.5	Breathing zone concentration measurements	450
14.11.2.6	Breathing volume rate and deposition coefficient measurements for miners	453
14.11.2.7	Assessment of the deposition and the upper-bound average breathing rates for miners	454
14.11.2.8	Assessment of the breathing rates of miners	456
14.11.2.9	Assessment of the dose (activity, intake) in the lungs of miners	459
14.11.2.10	Results	464
14.11.3	The method of direct measurement of activity (dose) in the lungs of miners	464
14.11.3.1	Theory of the method.....	465
14.11.3.2	Assessment of uncertainties in the evaluation of dose.....	467
14.11.3.3	Correction for the shift of equilibrium of radon progeny in the air and in the lungs	468
14.11.3.4	Accounting for parametric variations: Variations of concentrations, breathing rate, and deposition coefficients in real working conditions	472
14.11.3.5	Model measurement.....	474
14.11.3.6	Phantom measurements and geometric corrections	475
14.11.3.7	Assessment of the errors of the direct method	476
14.11.3.8	Portable instrument for direct measurement of the activity of radon decay products in the lungs of miners	480
14.11.3.9	Radon decay products as a radioactive marker in studying the deposition and dosimetry of nonradioactive aerosols	481
14.12	Radioactive aerosols epidemiology: Miners studies	483
14.12.1	Lung cancer mortality and lung sickness among nonuranium miners in Tadjikistan	483
14.12.1.1	Lung cancer mortality data	483
14.12.1.2	Lung sickness data	487
14.12.1.3	Comparison of Tadjikistan data with data from other epidemiological studies	490
14.12.2	Quality of dosimetry and the risk assessment for miners some aspects of the comparison of a "Joint Analysis of 11 Underground Miners Studies" and a study of nonuranium miners in Tadjikistan	490
References	493

chapter fifteen

Dosimetry and epidemiology of Russian uranium mines

I.V. Pavlov

VNIPI PT, Moscow, Russia

Contents

15.1 Individual radon decay products concentration distribution in the 1090 dwellings of the village near Krasnokamensk from 1990 to 1991. The maximum level of radon progeny concentration — 20,000 Bq m ⁻³	503
15.2 Method and instrumentation for the integral volume activity of radon progeny and long-lived nuclides for a long period of time (from 8 h to 3 months)	504
15.2.1 A sampling device for breathing zone measurements of the integral volume activity of radon and thoron progeny, long-lived nuclides, and also nonradioactive aerosols	504
15.2.1.1 General thesis	504
15.2.1.2 Theoretical basis of the method	505
15.3 Epidemiological data on miners in the city of Lermontov, Russia	509
15.4 Individual dose distribution of uranium mines personnel (2500 workers) to radon progeny, long-lived nuclides, and external gamma-radiation from 1990 to 1994 in the city of Krasnokamensk, Chita region, Siberia	513
Acknowledgment	515
References	515

chapter sixteen

Radioactive aerosols of the Chernobyl accident

A.K. Budyka and B.I. Ogorodnikov
Karpov Physico-Chemical Institute, Moscow

Contents

16.1	Introduction	517
16.2	Dynamics of the ejection of radionuclides from the reactor	518
16.3	Global transfer of the accident products	519
16.4	Sampling devices.....	520
16.5	Aerosol characteristics in the first half year after the accident	520
16.6	Gaseous components I, Te, and Ru in the atmosphere	526
16.7	Characteristics of radioactive aerosols near the earth's surface	529
16.8	Forest fires in the exclusive zone	531
16.9	Aerosols of the "Shelter"	531
16.9.1	Types of aerosols.....	532
16.9.2	Aerosol concentration inside the "Shelter"	532
16.9.3	Aerosol transport from the "Shelter" into the atmosphere	534
16.9.4	Aerosol dispersity inside the "Shelter"	535
16.10	Radioactive aerosols close to the surface layer of the atmosphere near "Shelter" ...	536
16.11	Conclusion	538
	Acknowledgment	538
	References	538

chapter seventeen

Aerosol filtration (aerosol sampling by fibrous filters)

A.K. Budyka and B.I. Ogorodnikov
Karpov Physico-Chemical Institute, Moscow

Contents

17.1	Introduction	541
17.2	Terminology and definitions	542
17.3	Particle capture mechanisms	544
17.3.1	Diffusion	544
17.3.2	Interception	545
17.3.3	Inertia	545
17.3.4	Electrostatic	545
17.3.5	Gravitational effect	546
17.3.6	Combined actions of the filtration mechanisms	546
17.4	The most (more) penetrating size	546
17.5	Pressure drop	547
17.6	Effect of nonstationary filtration	547
17.7	Fiber filters FP (Petryanov's filters)	548
17.8	Using the fiber filters for particle size measurement	549
17.8.1	Size range	551
17.8.2	Sampling	551
17.8.3	Comparison with impactor	551
17.8.4	MMF application	552
17.9	Filters for detecting gaseous compounds	552
17.10	Correction on desorption of volatile substances	553
17.11	Filter material composition for atmospheric monitoring	553
17.12	Conclusion	554
	Acknowledgment	554
	References	554

chapter eighteen

Radioactive aerosol standards

L.S. Ruzer

Lawrence Berkeley National Laboratory (USA)

Yu.V. Kuznetsov and V.L. Kustova

All-Russian Scientific Research Institute to Physico-Technical and Radiotechnical Measurements ("VNIIFTRI"), Moscow, Russia

D.E. Fertman and A.I. Rizin

Scientific Engineering Centre, "SNIIP" Moscow, Russia

Contents

18.1 U.S.S.R. special state standard for the volumetric activity of radioactive aerosols	557
18.2 Currently applicable radioactive aerosol standards	562
18.2.1 Radon and its decay products	562
18.2.2 Artificial radioactive aerosols	563
18.2.3 Developing model aerosol sources SAS in order to test aerosol radiometers directly on the consumer place	565
References	566

chapter nineteen

Radon and thoron in the environment: Concentrations and lung cancer risk

Naomi H. Harley

New York University School of Medicine

Contents

19.1	Introduction	569
19.2	Environmental concentrations	570
19.3	Indoor concentrations.....	570
19.4	Outdoor concentrations	570
19.5	Stratospheric concentrations	571
19.6	Radon in drinking water	573
19.7	Bronchial lung dose	574
19.8	Dose to the fetus from radon in drinking water	577
19.9	Confounding of ^{222}Rn and ^{220}Rn in the measurement of "radon"	577
19.10	Guidelines for indoor ^{222}Rn	579
19.11	Lung cancer risk projections	579
19.12	Summary	581
	References	582

chapter twenty

Risk from inhalation of the long-lived radionuclides uranium, thorium, and fallout plutonium in the atmosphere

Isabel M. Fisenne

USDHS Environmental Measurements Laboratory

Contents

20.1	Introduction	585
20.2	Similarities and differences	586
20.3	Sampling.....	586
20.4	Uranium in TSP.....	587
20.5	Th in TSP	587
20.6	Pu in TSP	588
20.7	Resuspension	590
20.8	Respirable concentrations of U, Th, and Pu	591
20.9	Value of long-term monitoring	592
20.10	Exposure estimation from the inhalation of U, Th, and Pu	592
	References	593

chapter twenty-one

Health physics considerations of aerosols in radiosynthesis laboratories

Mark L. Maiello

Wyeth Research, R&D Environmental Health & Safety

Contents

21.1 Introduction	595
21.2 Airborne radioactivity	596
21.2.1 Laboratory air effluents	597
21.2.2 Laboratory surface contamination	597
21.3 Control of contamination in the radiosynthesis lab	598
References	599

chapter twenty-three

Health effects of ambient ultrafine particles

Beverly S. Cohen

New York University School of Medicine

Contents

23.1 Introduction	607
23.2 Formation	609
23.3 Composition	610
23.4 Lung deposition.....	612
23.5 Toxicology.....	612
23.6 Summary.....	616
References	616

chapter twenty-four

Health effects of aerosols: Mechanisms and epidemiology

Ira B. Tager

University of California at Berkeley

Contents

24.1 Introduction	619
24.2 Characteristics of outdoor (ambient) and indoor aerosol sources of importance to human health	622
24.2.1 Outdoor aerosol (Table 24.1, Figure 24.1)	622
24.2.2 Indoor aerosol (Table 24.1 and Figure 24.3)	624
24.3 Deposition and clearance of aerosols from the human respiratory tract	626
24.3.1 Deposition and retention	626
24.3.2 Clearance	629
24.4 Mechanisms of toxicity of aerosol components	633
24.4.1 Particle aerosol induction of oxidative damage	634
24.4.2 Particle aerosol induction of inflammation	635
24.5 Human health effects associated with ambient PM	640
24.5.1 Health effects associated with chronic exposure to PM	649
24.5.1.1 Effects of exposure to ambient PM and birth outcomes (Table 24.9) ..	649
24.5.1.2 Increased mortality related to long-term exposure to PM aerosol ..	651
24.5.1.3 Atopic allergy and asthma	656
24.5.1.4 Cancer	659
24.5.2 Health effects associated with acute and subacute exposures to PM	660
24.5.2.1 Mortality	660
24.5.2.2 Physiological mechanisms related to the association of daily changes in PM and daily mortality	676
24.6 Conclusions	679
References	679
